IMPORTANT!

READ CAREFULLY BEFORE USE.

KEEP THIS GUIDE FOR FUTURE REFERENCE.

Screenshots and graphics in this book may differ slightly from what you see due to differences in your product firmware or your computer operating system. Every effort has been made to ensure that the information in this manual is accurate.

Related Documentation

- Quick Start Guide

The Quick Start Guide shows how to connect the WX3401-B0.

- More Information

Go to **support.zyxel.com** to find other information on the WX3401-B0.

Document Conventions

Warnings and Notes

These are how warnings and notes are shown in this guide.

Warnings tell you about things that could harm you or your device.

Note: Notes tell you other important information (for example, other things you may need to configure or helpful tips) or recommendations.

Syntax Conventions

- The device in this user's guide may be referred to as the "WX3401-B0" in this guide.
- Product labels, screen names, field labels and field choices are all in **bold** font.
- A right angle bracket (>) within a screen name denotes a mouse click. For example, **Network Setting > Wireless > MAC Authentication** means you first click **Network Setting** in the navigation panel, then the **Wireless** sub menu and finally the **MAC Authentication** tab to get to that screen.

Icons Used in Figures

Figures in this user guide may use the following generic icons. The WX3401-B0 icon is not an exact representation of your device.

WX3401-B0 	Wireless Device 	Laptop Computer

PART I

User's Guide

CHAPTER 1

Introduction

1.1 Overview

The WX3401-B0 can function as a Repeater or an Access Point (AP).

Set your WX3401-B0 as an **AP** if you already have a router in your network and you want to bridge a wired network (LAN) and another LAN or wireless LAN (WLAN) in the same subnet. If the WX3401-B0 has a wired uplink connection, it is in AP mode.

Set your WX3401-B0 as a **Repeater** if you want to connect an existing wireless network through another Access Point and also provide network connection to wireless clients. In this mode, the WX3401-B0 can be an access point and a wireless client at the same time. If the WX3401-B0 has a wireless uplink connection, it is in RP mode.

Figure 1 Device Operation Mode Example: AP Mode

Figure 2 Device Operation Mode Example: Repeater Mode

Note: In **Figure 1**, the WX3401-B0 that is acting as an **AP** is bridging a wired network and a wireless LAN in the same subnet.

In **Figure 2**, the WX3401-B0 that is acting as a **Repeater** is letting a wireless client connect to the network wirelessly through a router. This helps you expand wireless coverage when you have an access point or wireless router already in your network.

The WX3401-B0 can use both 2.4 GHz and 5 GHz networks at the same time. See [Section 1.2 on page 12](#) for more information on dual-band WiFi.

You can add more WX3401-B0s to your network to form a daisy chain, see [Section 1.3 on page 13](#) for more information.

Set up a Mesh network with your WX3401-B0 to enjoy band steering, AP steering, auto-configuration and other advances for your wireless network, see [Section 1.4 on page 14](#) for more information.

Manage the WX3401-B0 and your WiFi network using the MPro Mesh app. You can check your WiFi network status, change passwords or set up a WiFi access with a QR code, see [Chapter 4 on page 31](#) for more information.

Figure 3 Home WiFi Network

1.2 Dual-Band WiFi

By default, the wireless LAN (WLAN) is enabled on the WX3401-B0. IEEE 802.11a/b/g/n/ac/ax compliant clients can wirelessly connect to the WX3401-B0 to access network resources.

The WX3401-B0 is a dual-band extender that can use both 2.4GHz and 5GHz networks at the same time.

You could use the 2.4 GHz band for regular Internet surfing and downloading while using the 5 GHz band for time sensitive traffic like high-definition video, music, and gaming.

Figure 4 Dual-Band Application

The WX3401-B0 can act as an Access Point (AP) for IEEE 802.11a/b/g/n/ac/ax wireless clients, such as notebook computers, iPads, smartphones, and so on. It allows them to connect to the Internet without having to rely on Ethernet cables.

Figure 5 Wireless Access Example

1.3 Daisy Chain

You can add more extenders to your network to form a daisy chain. Daisy chain refers to the connection from the first WX3401-B0 to up to three other WX3401-B0s to extend the WiFi connection from the router to the client. The WX3401-B0 uplink connection determines the mode: Access Point or Repeater.

- If the WX3401-B0 has a wired uplink connection, it is in AP mode.
- If the WX3401-B0 has a wireless uplink connection, it is in RP mode.

Here are some possible scenarios for the WX3401-B0's daisy chain connection:

Figure 6 Scenario 1: three APs

Figure 7 Scenario 2: two APs and one RP

Figure 8 Scenario 3: one AP and two RPs

Figure 9 Scenario 4: two RPs

Note: Set up your network as in **Scenario 1-3** if your router does not support Zyxel MPro Mesh. **Scenario 4** in [Figure 9](#) is only for routers that support Zyxel MPro Mesh.

Note: We do not recommend connecting more than three WX3401-B0s in your daisy chain network. If you already have two WX3401-B0s acting as repeaters, we do not recommend adding another WX3401-B0 as a repeater.

Note: If one of the WX3401-B0 has a wireless uplink connection, we do not recommend linking the other WX3401-B0s in your daisy chain network with a wired connection.

1.4 MPro Mesh

Zyxel MPro Mesh supports AP steering and Band steering.

- AP steering allows wireless clients to roam seamlessly between Mesh supported devices in your Mesh network by using the same SSID and WiFi password. Also, AP steering helps monitor wireless clients and drop their connections to optimize the WX3401-B0 bandwidth when the clients are idle or have a low signal. When a wireless client is dropped, it has the opportunity to steer to a Mesh supported device with a strong signal.

Figure 10 AP Steering Application

- Band steering allows 2.4GHz/5GHz dual-band wireless clients to move from one band to another. For example, if the 2.4GHz channel is congested, wireless clients that support 5GHz can move to the 5GHz band.

Figure 11 Band Steering Application

You need a router or an AP that can function as a controller in order to set up a Mesh network. A controller manages and coordinates WiFi activity in a network.

A controller also manages the SSIDs and password on all APs in a network (auto-configuration). For example, if you change the SSID on a router, all the SSIDs of APs in a network will also change.

Figure 12 Mesh Application

Icon used in Figure 9:

- C- router controller (The DX5301-B in Scenario 1, see [Section 4.3.1 on page 31](#)) or AP controller (the first WX3401-B0 in Scenario 2, see [Section 4.3.2 on page 36](#))
- AP- Access Point

- RP- Repeater
- C1- Client1
- C2- Client2
- APC- Access Point coverage area
- RPC- Repeater coverage area

Note: Your router must have an Internet connection whether it supports MPro Mesh or not.

Note: If your router supports Zyxel MPro Mesh, it will serve as the router controller in a Mesh network with the WX3401-B0.

If your router does not support Zyxel MPro Mesh, your WX3401-B0 will automatically become an AP controller.

1.5 Ways to Manage the WX3401-B0

Use any of the following methods to manage the WX3401-B0.

- Web Configurator. This is the simplest way to manage the WX3401-B0.
- MPro Mesh App. Download the MPro Mesh app from Google Play or Apple Store to manage the WX3401-B0.

1.6 Changing the WX3401-B0 to Different Modes

To set the WX3401-B0 to **AP** Mode:

- 1 Connect a modem/router to one of the LAN port of the WX3401-B0 using an Ethernet cable.

Note: You modem/router must have an Internet connection.

- 2 Connect your computer to the other LAN port of the router. Log into the router's Web Configurator to check the IP address the router assigned to your WX3401-B0.
- 3 Open a web browser such as Internet Explorer and type "http:// (DHCP-assigned IP)" as the web address in your web browser.
- 4 Log into the Web Configurator.

Note: If your router supports Zyxel MPro Mesh, the router will function as an AP controller.

If your router does not support Zyxel MPro Mesh, the WX3401-B0 will function as an AP controller.

To set the WX3401-B0 to **Repeater** Mode:

- 1 Connect a modem/router to the WX3401-B0 wirelessly.

Note: Your modem/router must have an Internet connection.

- 2** Connect your computer to the LAN port of the WX3401-B0.
- 3** Give your computer a fixed IP address in the range between 192.168.1.3 and 192.168.1.254.
- 4** After you have set your computer's IP address, open a web browser such as Internet Explorer and enter "http://192.168.1.2" as the web address in your web browser.
- 5** Log into the Web Configurator.

CHAPTER 2

Hardware

This section describes the front and back panel of the WX3401-B0. Refer to the Quick Start Guides to see how to make the hardware connections.

2.1 Front Panel and LEDs

This figure shows the front panel of the WX3401-B0. Use the LEDs to determine if the WX3401-B0 is behaving normally or if there are problems on your network.

See [Table 5 on page 36](#) and [Table 6 on page 42](#) for more information on the LEDs.

Figure 13 The WX3401-B0's Front Panel

2.2 Rear Panel

Figure 14 The WX3401-B0's Rear Panel

Table 1 Panel Ports and Buttons

LABEL	DESCRIPTION
LAN1/LAN2	Connect computers or other Ethernet devices to Ethernet ports for Internet access.
WPS	Press the WPS button once within eight seconds to enable the AP/Repeater mode.
POWER ON/OFF	Connect the power cable and then press the power button to start the device.
RESET	Press the button to return the WX3401-B0 to the factory defaults.

2.3 Wall Mounting

You may need screw anchors if mounting on a concrete or brick wall.

Table 2 Wall Mounting Information

Distance between holes	89.00 mm
M4 Screws	Two
Screw anchors (optional)	Two

Figure 15 Screw Specifications

- 1 Select a position free of obstructions on a wall strong enough to hold the weight of the device.
- 2 Mark two holes on the wall at the appropriate distance apart for the screws.

Be careful to avoid damaging pipes or cables located inside the wall when drilling holes for the screws.

Figure 16 Wall Mounting Distance

- 3 If using screw anchors, drill two holes for the screw anchors into the wall. Push the anchors into the full depth of the holes, then insert the screws into the anchors. Do not insert the screws all the way in - leave a small gap of about 0.5 cm.
If not using screw anchors, use a screwdriver to insert the screws into the wall. Do not insert the screws all the way in - leave a gap of about 0.5 cm.
- 4 Make sure the screws are fastened well enough to hold the weight of the WX3401-B0 with the connection cables.
- 5 Align the holes on the back of the WX3401-B0 with the screws on the wall. Hang the WX3401-B0 on the screws.

Figure 17 Wall Mounting Example

2.4 WPS Button

Your WX3401-B0 supports WiFi Protected Setup (WPS), which is an easy way to set up a secure wireless network. WPS is an industry standard specification, defined by the Wi-Fi Alliance.

WPS allows you to quickly set up a wireless network with strong security, without having to configure security settings manually. Each WPS connection works between two devices. Both devices must support WPS (check each device's documentation to make sure).

Depending on the devices you have, you can either press a button (recommended) on the device itself, or in its web configurator. When WPS is activated on a device, it has two minutes to find another device that also has WPS activated. Then, the two devices connect and set up a secure network by themselves.

The **WPS** button is located at the front panel of the WX3401-B0.

2.4.1 Using the WPS Button

- 1 Make sure the power LED is on (not blinking).
- 2 Choose a mode
 - APC mode
 1. Press the WX3401-B0 **WPS** button once. The WPS LED should start blinking.
 2. Press the WPS button on the client within 2 minutes.
 - AP Mode (Downlink Daisy Chain For MPro Mesh)
 1. Press the first WX3401-B0 **WPS** button once.
 2. Press the **WPS** button once on the downlink WX3401-B0 within 2 minutes of each other.
 - Repeater mode (modem/router to the WX3401-B0)
 1. Press the WPS button on the modem/router. Release it when the WPS LED blinks.
 2. Press the WX3401-B0 **WPS** button once within 2 minutes to copy the WiFi settings from your modem/router to the WX3401-B0.
 3. The Link LED lights up when the process is finished.

- Repeater mode (the WX3401-B0 to the wireless client)
 1. Press the WX3401-B0 **WPS** button twice within 8 seconds to copy the WiFi settings from the WX3401-B0 to a wireless client, such as your smartphone or laptop.
 2. Wait until the WPS LED blinks.
 3. Press the WPS button on the client within 2 minutes.
- Repeater mode (Downlink Daisy Chain For MPro Mesh)
 1. Press the first WX3401-B0 **WPS** button twice within 8 seconds.
 2. Press the **WPS** button once on the downlink WX3401-B0 within 2 minutes of each other.

Note: You must activate WPS in the WX3401-B0 and in another wireless device within two minutes of each other.

Note: With WPS, wireless clients can only connect to the 5 GHz or 2.4 GHz wireless network using the first 5 GHz or 2.4 GHz SSID on the WX3401-B0 (in AP or repeater mode).

2.5 RESET Button

If you forget your password or you cannot access the Web Configurator, you will need to use the **RESET** button at the back of the WX3401-B0 to reload the factory-default configuration file. This means that you will lose all configurations that you had previously saved, the password will be reset to the default key on the device label.

2.5.1 Using the RESET Button

- 1 Make sure the power LED is on (not blinking).
- 2 Press the **RESET** button for longer than five seconds to set the WX3401-B0 back to its factory-default configurations.

CHAPTER 3

The Web Configurator

3.1 Overview

The Web Configurator is an HTML-based management interface that allows easy system setup and management via Internet browser. Use a browser that supports HTML5, such as Microsoft Edge, Internet Explorer 11, Mozilla Firefox, or Google Chrome. The recommended screen resolution is 1024 by 768 pixels.

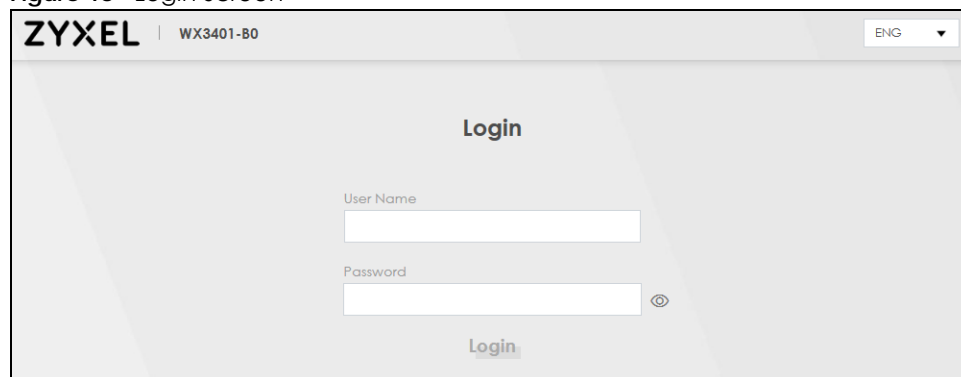

In order to use the Web Configurator you need to allow:

- Web browser pop-up windows from your device.
- JavaScript (enabled by default).
- Java permissions (enabled by default).

3.1.1 Accessing the Web Configurator

- 1 Make sure your WX3401-B0 hardware is properly connected (refer to the Quick Start Guide).
- 2 Make sure your computer has an IP address in the same subnet as the WX3401-B0. Your computer should have an IP address from 192.168.1.3 to 192.168.1.254. See [Section 18.5 on page 147](#) for details.
- 3 Launch your web browser. If the WX3401-B0 does not automatically re-direct you to the login screen, go to <http://192.168.1.2>.
- 4 A login screen displays. Select the language you prefer.
- 5 To access the administrative Web Configurator and manage the WX3401-B0, type the default username **admin** and the randomly assigned default password (see the device label) on the login screen and click **Login**. If you have changed the password, enter your password and click **Login**.

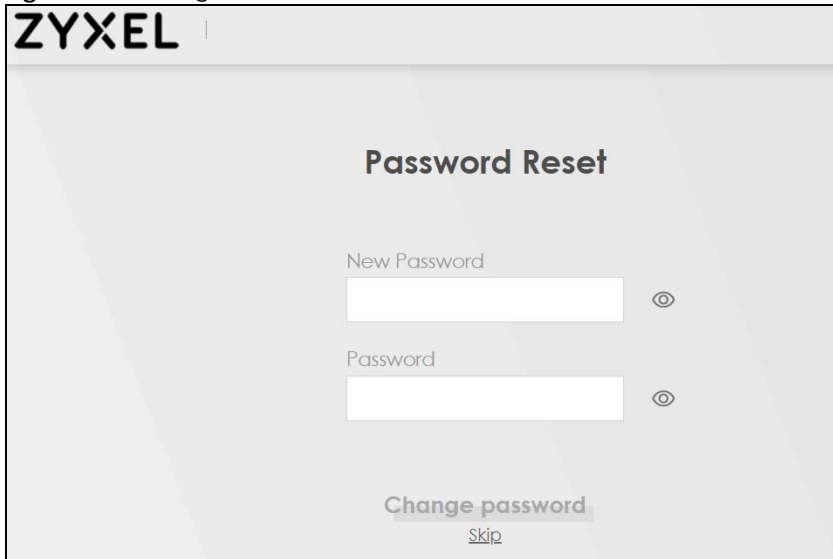

Figure 18 Login Screen

Note: The default allowable times that you can enter the **Password** is 3. If you entered the wrong password for the fourth time, by default the Web Configurator will lock itself for 5 minutes before you can try entering the correct **Password** again. You can change these settings at **Maintenance > User Account > Add New / Edit Account** (see [Section 12.2.1 on page 126](#)).

- 6 The following screen displays when you log into the Web Configurator for the first time. Enter a new password, retype it to confirm, and click **Change password**. If you prefer to use the default password, click **Skip**.

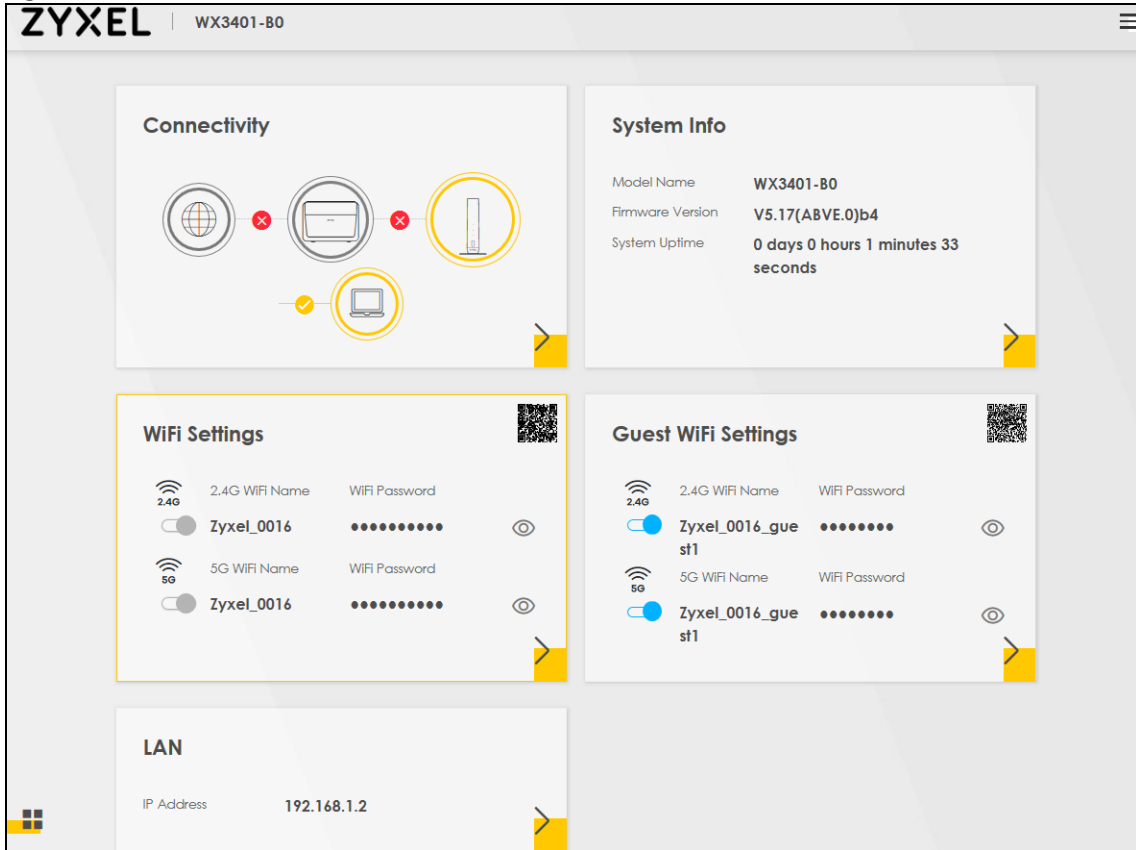

Figure 19 Change Password Screen

The screenshot shows the ZYXEL web interface for password reset. At the top left is the ZYXEL logo. The main heading is "Password Reset". Below this, there are two input fields: "New Password" and "Password". Each input field has a small circular icon to its right, likely for toggling password visibility. At the bottom of the form, there are two buttons: "Change password" and "Skip".

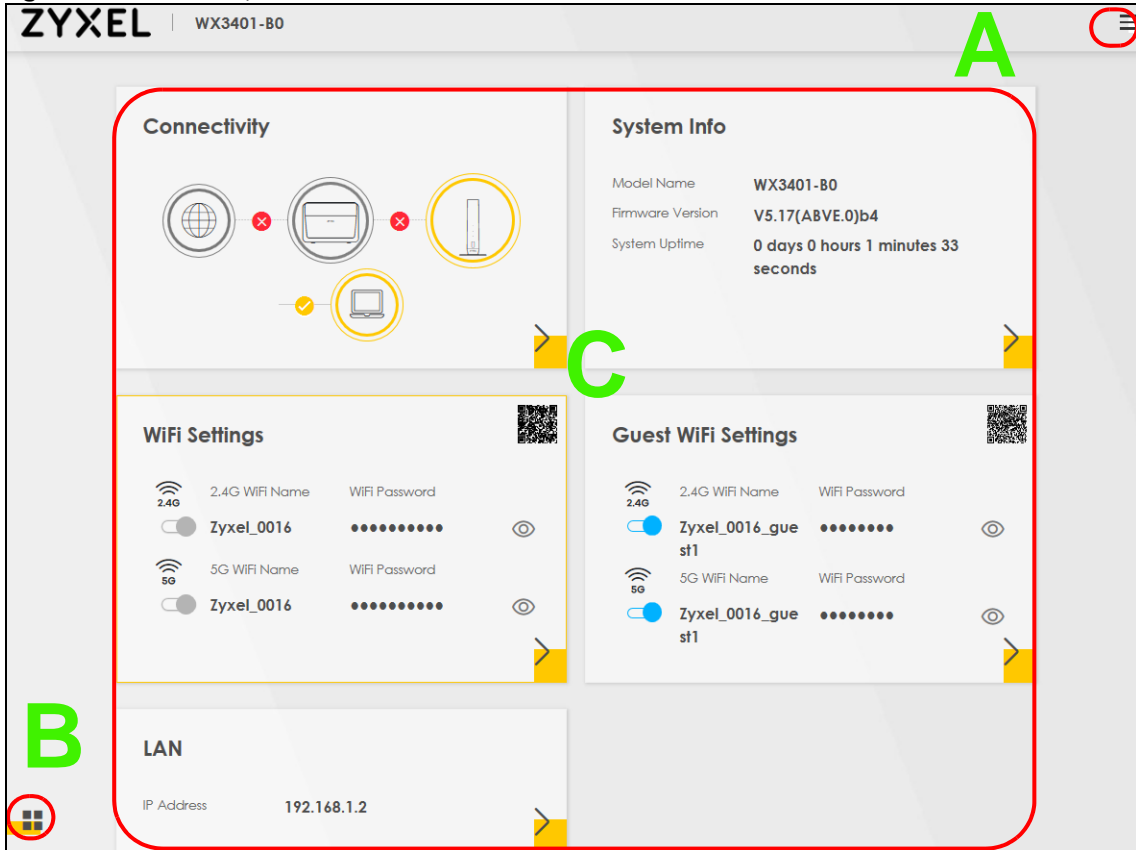

- 7 The **Connection Status** page appears. Use this screen to configure basic Internet access and wireless settings (see [Section 5.1 on page 73](#) for details).

Figure 20 Connection Status

3.2 Web Configurator Layout

Figure 21 Screen Layout

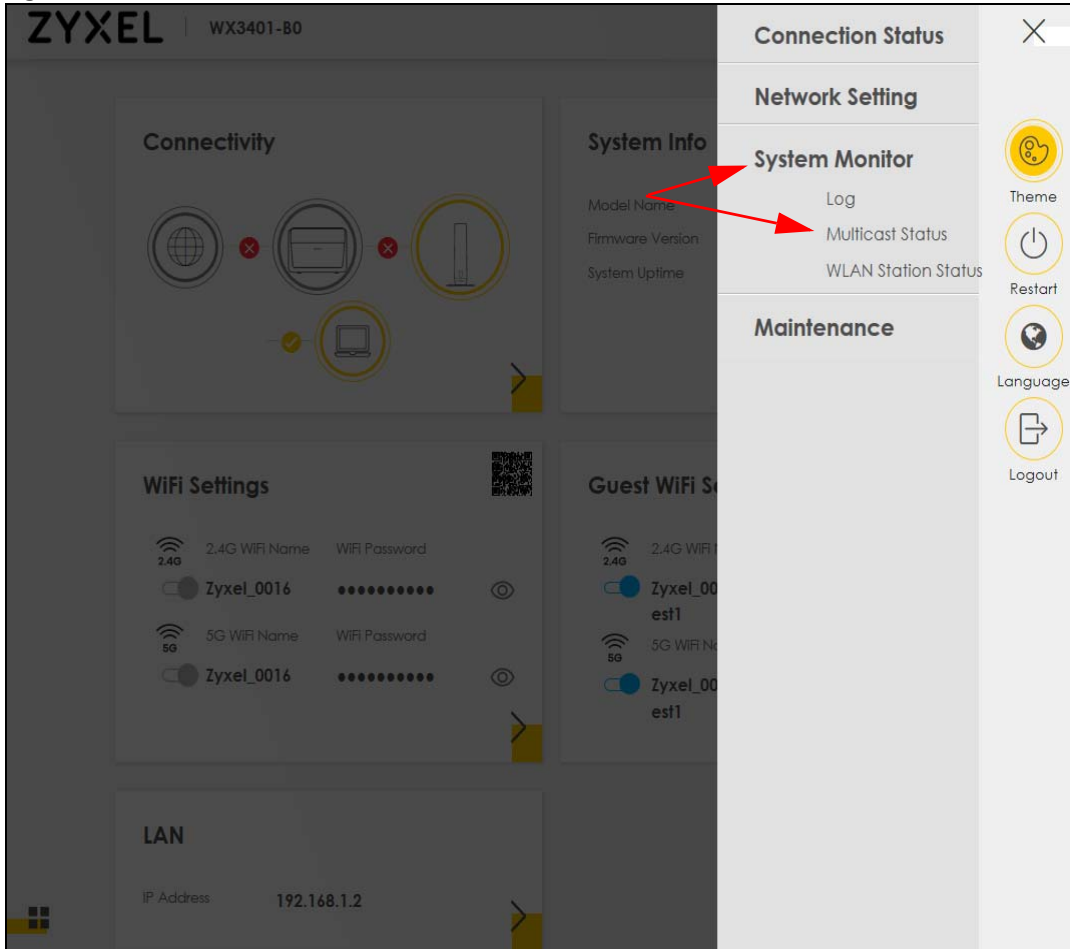

As illustrated above, the main screen is divided into these parts:

- A - Navigation Panel
- B - Layout Icon
- C - Main Window

3.2.1 Navigation Panel

Click the menu icon (☰) to display the navigation panel that contains configuration menus and icons (quick links). Click X to close the navigation panel.

Figure 22 Navigation Panel

3.2.1.1 Configuration Menus

Use the menu items on the navigation panel to open screens to configure WX3401-B0 features. The following tables describe each menu item.

Table 3 Configuration Menus Summary

LINK	TAB	FUNCTION
Connection Status		Use this screen to configure basic Internet access and wireless settings. This screen also shows the network status of the WX3401-B0 and computers/devices connected to it.
Network Setting		

Table 3 Configuration Menus Summary (continued)

LINK	TAB	FUNCTION
Wireless	General	Use this screen to configure the WiFi settings and wireless LAN authentication/security settings. The main 2.4G and/or 5G is enabled by default and not configurable.
	Guest/More AP	Use this screen to configure multiple BSSs on the WX3401-B0.
	MAC Authentication	Use this screen to block or allow wireless traffic from wireless devices of certain SSIDs and MAC addresses to the WX3401-B0.
	WPS	Use this screen to configure and view your WPS (WiFi Protected Setup) settings.
	WMM	Use this screen to enable or disable WiFi MultiMedia (WMM).
	Others	Use this screen to configure advanced wireless settings.
	Channel Status	Use this screen to scan WiFi channel noises and view the results.
	Operating Modes	Use this screen to enter the SSID and configure the wireless security between the WX3401-B0 and the wireless network to which you want to connect.
AP List	Use this screen to scan the wireless networks in the WX3401-B0's area.	
Home Networking	Home Networking	Use this screen to configure DHCP/Static IP settings, and other advanced properties.
System Monitor		
Log	Log	Use this screen to view the status of events that occurred to the WX3401-B0. You can export or e-mail the logs.
Multicast Status	IGMP Status	Use this screen to view the status of all IGMP settings on the WX3401-B0.
	MLD Status	Use this screen to view the status of all MLD settings on the WX3401-B0.
WLAN Station Status	WLAN Station Status	Use this screen to view the wireless stations that are currently associated with the WX3401-B0.
Maintenance		
System	System	Use this screen to set Device name.
User Account	User Account	Use this screen to change user password on the WX3401-B0.
Remote Management	Remote Management	Use this screen to enable specific traffic directions for network services.
Time	Time	Use this screen to change your WX3401-B0's time and date.
Firmware Upgrade	Firmware Upgrade	Use this screen to upload firmware to your WX3401-B0.
Backup/Restore	Backup/Restore	Use this screen to backup and restore your WX3401-B0's configuration (settings) or reset the factory default settings.
Reboot	Reboot	Use this screen to reboot the WX3401-B0 without turning the power off.
Diagnostic	Ping&Traceroute	Use this screen to identify problems with the WX3401-B0. You can use Ping or TraceRoute to help you identify problems.

3.2.1.2 Icons

The navigation panel provides some icons on the right hand side.

The icons provide the following functions.

Table 4 Web Configurator Icons

ICON	DESCRIPTION
 Theme	<p>Theme: Click this icon to select a color that you prefer and apply it to the Web Configurator.</p>

 Language	<p>Language: Select the language you prefer.</p>
 Logout	<p>Logout: Click this icon to log out of the Web Configurator.</p>

CHAPTER 4

Tutorials

4.1 Overview

This chapter provides tutorials for setting up the WX3401-B0 using a wireless or a wired connection. Besides the Web Configurator, this chapter shows you how to use the MPro Mesh app to manage the WX3401-B0 and its Mesh network.

4.2 What You Can Do

- To set up your WX3401-B0 with a Zyxel MPro Mesh Router using a wireless connection, see [Section 4.3.1 on page 31](#).
- To set up your WX3401-B0 with a non-MPro Mesh Router using a wired connection, see [Section 4.3.2 on page 36](#).
- Use the **Home** screen to reboot your WX3401-B0 or add WiFi extenders to your network, see [Section 4.4 on page 43](#).
- Use the **Devices** screen to view the information of WiFi clients connected to the WX3401-B0, see [Section 4.5 on page 55](#).
- Use the **WiFi Settings** screen to configure your main or guest WiFi network, see [Section 4.6 on page 57](#).
- Use the **Account** screen to view your app version or logout, see [Section 4.8 on page 63](#).
- Use the **General** screen to set up a secure wireless network, see [Section 4.9 on page 63](#).
- Use the **Guest/More AP** screen to set up multiple wireless groups, see [Section 4.10 on page 67](#).

4.3 Setting Up Your WX3401-B0

There are several ways to set up your WX3401-B0. You can set it up with a Zyxel MPro Mesh Router using a wired or wireless connection. Alternatively, you can set it up with a non-MPro Mesh Router with a wired connection. This section shows you how to connect to a Zyxel MPro Mesh router wirelessly and how to connect to a non-MPro Mesh router with an Ethernet cable.

4.3.1 Scenario 1-Connect to a Zyxel MPro Mesh Router Wirelessly

This scenario shows you how to set up the WX3401-B0 with a Zyxel MPro Mesh Router using a wireless connection (with the DX5301-B as an example).

Note: You can also set up your WX3401-B0 with a Zyxel MPro Mesh Router using a wired connection. (See [Section 4.4.3 on page 47](#) for more information)

- 1 Download the MPro Mesh app from Google Play or Apple Store.

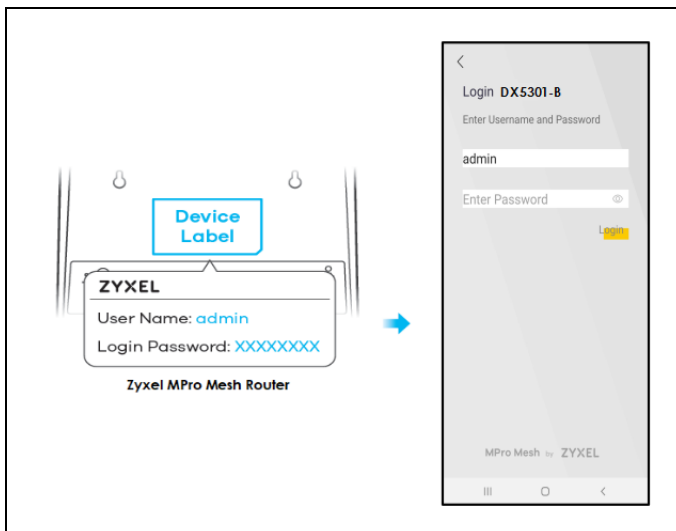

- 2 Connect your mobile device to the wireless network of the Zyxel MPro Mesh Router. Note the SSID and password on the back label of the Zyxel MPro Mesh Router. Find this SSID on your mobile device. Enter the key to connect to your router.

Note: The Zyxel MPro Mesh Router is the wireless controller, so you must connect to it to use the MPro Mesh app to manage WiFi settings.

- 3 Connect the MPro Mesh App to the Zyxel MPro Mesh Router. Open the app, enter the username and password on the back label of your Zyxel MPro Mesh Router to log in the Home page of the App.

- 4 Rotate the stand on the bottom of the WX3401-B0 90 degrees.

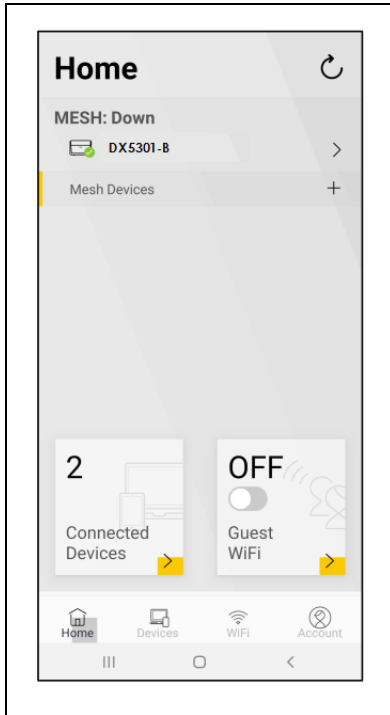

- 5 Place the WX3401-B0 where you want to extend the coverage of your wireless network.

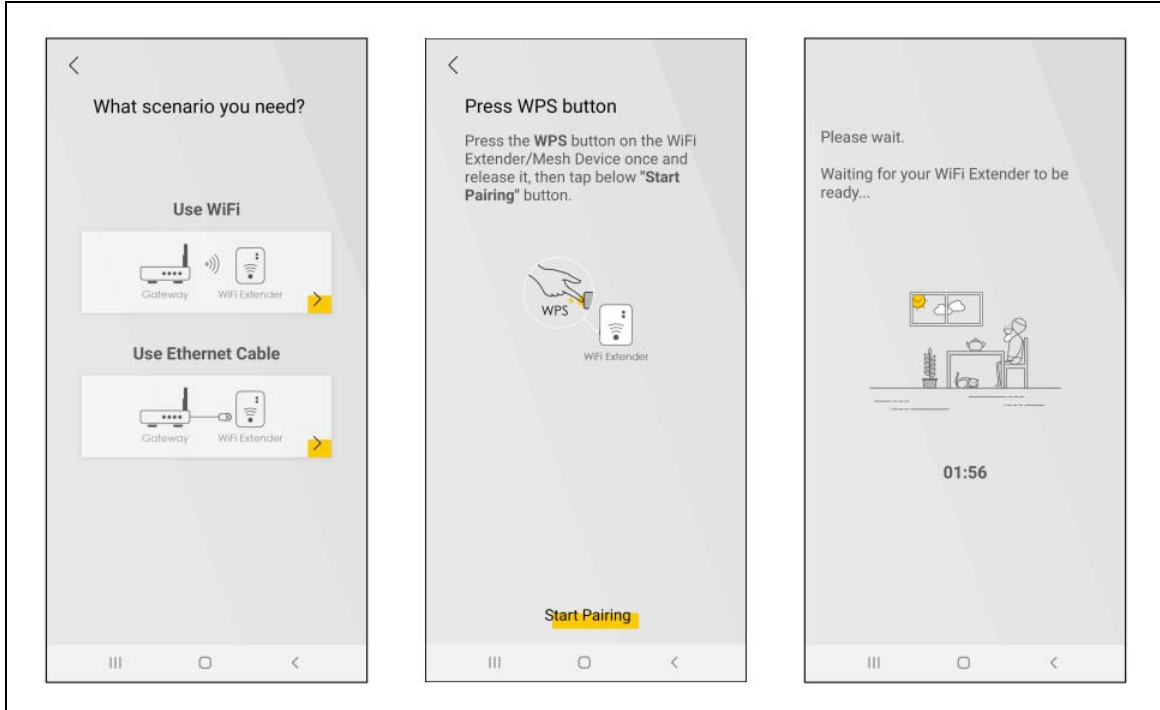

- 6 Plug in the power cable and switch on the WX3401-B0. Wait until the **POWER** LED turns steady green. This may take up to 2.5 minutes.

- 7 Open the MPro Mesh App. On the **Home** screen, tap on the **+** icon to add an extender.

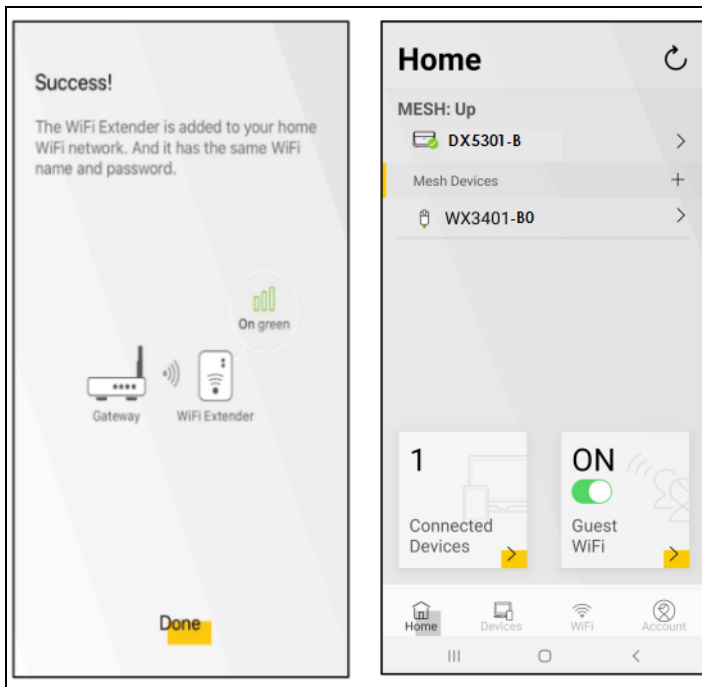

- 8 Select the **Use WiFi** scenario. Follow the instructions to start pairing the WX3401-B0 with a Zyxel MPro Mesh Router (with the DX5301-B as an example). Once the pairing starts, a 3-minute countdown timer will begin.

- 9 Within 2 minutes, press the WPS button once on the WX3401-B0 until WiFi LED starts blinking slowly.

- 10 After the WIFI LED turns steady green or fast blinking, wait for up to 2 minutes. The POWER LED should start blinking. The **POWER** and **Link** LED will turn solid green if the pairing process is successful. You can also check the result on the app screen.
- 11 Click **Done** to finish the pairing process. The Mpro Mesh Router (the controller) will undergo an auto-configuration after a Mesh network is established. (See [Section 1.4 on page 14](#) for more information.) Check the status of your MPro Mesh network on the **Home** screen.

- 12 The **POWER** LED shows if the WX3401-B0 is ready to join the WiFi network. The **LINK** LED shows the WiFi link quality. See [Section 18.1 on page 143](#) for more information on LED behaviors.

Table 5 LED Table (for the WX3401-B0)

LED	COLOR	STATUS	DESCRIPTION
POWER 	Green	On	Power is on or the MPro Mesh configuration process is done.
		Blinking	The WX3401 is starting up or under the MPro Mesh configuration process.
	Red	On	The WX3401 detects an error.
		Blinking	The WX3401 is upgrading firmware.
Link (With a wireless connection) 	Green	On	The 2.4G/5G WiFi is ready.
	Amber	On	The signal is too strong. We suggest moving the WX3401 away from the MPro Mesh Router.
	Red	On	The signal is too weak. Move the WX3401-B0 closer to the MPro Mesh Router.
Link (With a wired connection) 	Green	On	The Ethernet cable is connected to the LAN port on the WX3401.
WiFi 	Green	On	The WiFi connection to the MPro Mesh router is good.
		Slow Blinking	If you press the WPS button, slow blinking within 120 seconds means the WPS is in process.
		Fast Blinking	If you did not press the WPS button or the WPS process is done, fast blinking means the WX3401 is transmitting/receiving WiFi data.
		Off	The 2.4G/5G WiFi is disabled.

4.3.2 Scenario 2-Connect to a Non-MPro Mesh Router with an Ethernet Cable

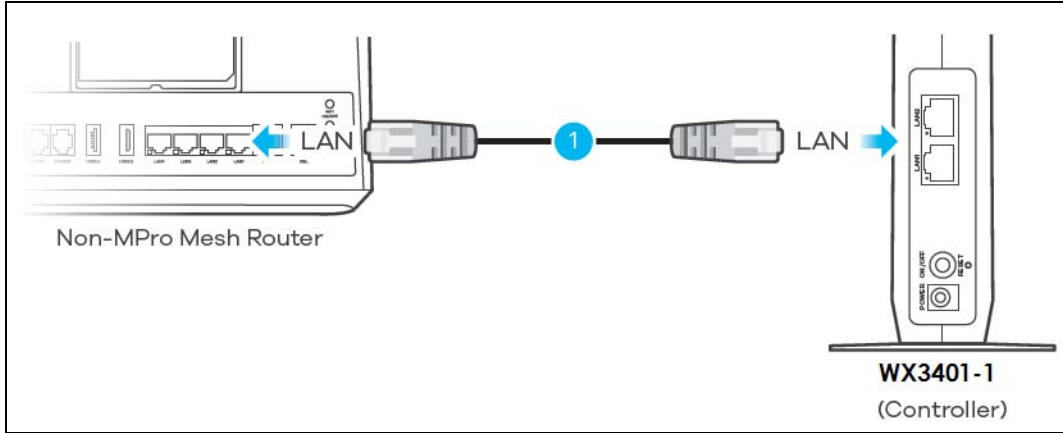

This scenario describes the process to create a Mesh network through a wired connection using two WX3401-B0s and a non-MPro Mesh Router.

Make sure the non-MPro Mesh Router is connected to the Internet. The first WX3401-B0 (WX3401-1) must be connected to your router using an Ethernet cable. Then, connect the second WX3401-B0 (WX3401-2) wirelessly to the first WX3401-B0 (WX3401-1).

Follow the steps below to set up the WX3401-1 with a non-MPro Mesh Router.

Connect the WX3401-1 to the Non-MPro Mesh Router

- 1 Use an Ethernet cable to connect the WX3401-1 to your non-MPro Mesh Router.

- 2 Rotate the stand on the bottom of the WX3401-1 90 degrees.

- 3 Plug in the power cable and switch on the WX3401-1. Wait until the **POWER** LED turns steady green. This may take up to 2.5 minutes.

- 4 On your mobile device, go to the WiFi settings. Long press your existing WiFi connection. Tap **Forget network** to remove your existing WiFi connection.

- 5 Connect your mobile device to the wireless network of the WX3401-1. Note the SSID and key on the side label of the WX3401-1. Find this SSID on your mobile device. Enter the key to connect to your WX3401-1.

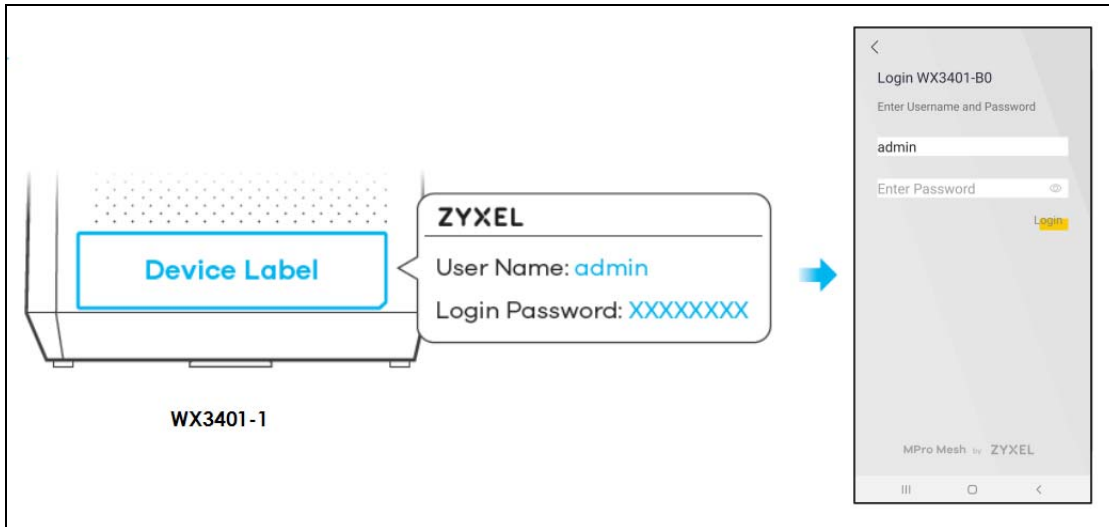

Note: In this scenario, the WX3401-1 is the wireless controller, so you must connect to it to use the MPro Mesh app to manage the wireless network.

- 6 Download the MPro Mesh App from Google Play or Apple Store.

- 7 Connect the MPro Mesh App to the WX3401-1. Open the app, enter the username and password on the side label of the WX3401-1 when prompted.

Connect the WX3401-2 to the WX3401-1

- 1 Rotate the stand on the bottom of the WX3401-2 90 degrees.

- 2 Place the WX3401-2 where you want to extend the coverage of your network.

- 3 Plug in the power cable and switch on the WX3401-2. Wait until the **POWER** LED turns steady green. This may take up to 2.5 minutes.

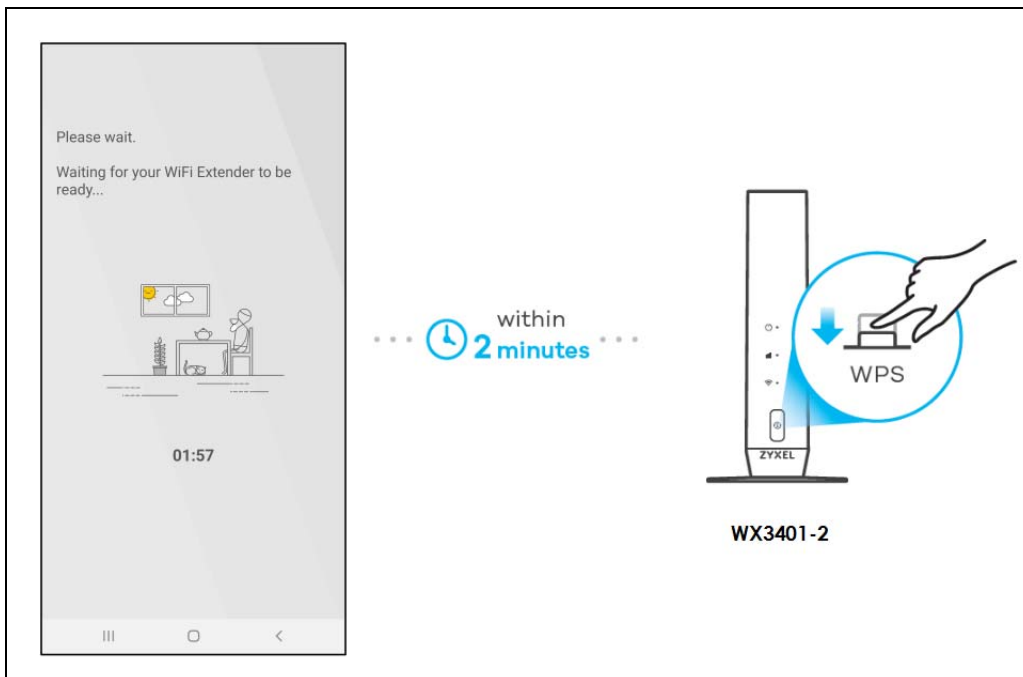

- 4 When the **POWER** LED on the WX3401-2 is steady green, open the MPro Mesh App. On the **Home** screen, tap on the **+** icon to add the WX3401-2.

- 5 Select the **Use WiFi** scenario. Follow the instructions to start pairing the WX3401-2 with the WX3401-1. Once the pairing starts, a 3-minute countdown timer will begin.

- 6 Within 2 minutes, press the WPS button once on the WX3401-2 for less than 3 seconds.

- 7 The **POWER** and **Link** LED on the WX3401-2 turns steady green if the pairing process is successful. You can also check the result on the app screen.

- Click **Done** to finish the pairing process. The the WX3401-1 (the controller) will undergo an auto - configuration after a Mesh network is established. (See [Section 1.4 on page 14](#) for more information). Check the status of your wireless Mesh network on the **Home** screen.

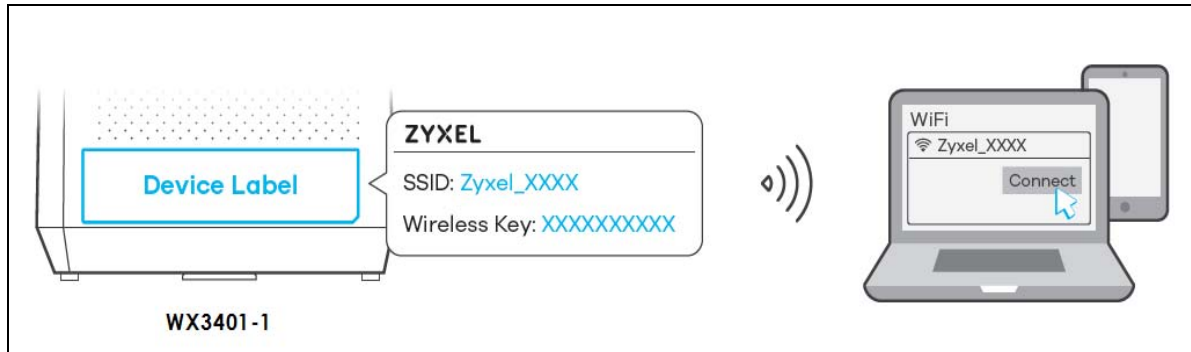

- The **POWER** LED shows if the WX3401-2 is ready to join the WiFi network. The **LINK** LED shows the WiFi link quality. See [Section Table 6 on page 42](#) for more information on LED behaviors.

Table 6 LED Table (for the WX3401-2)

LED	COLOR	STATUS	DESCRIPTION
POWER 	Green	On	Power is on or the MPro Mesh configuration process is done.
		Blinking	The WX3401-2 is starting up or under the MPro Mesh configuration process.
	Red	On	The WX3401-2 detects an error.
		Blinking	The WX3401-2 is upgrading firmware
Link (with a wireless connection) 	Green	On	The WiFi connection to the WX3401-1 is good.
	Amber	On	The signal is too strong. We suggest moving the WX3401-2 away from the WX3401-1.
	Red	On	The signal is too weak. Move the WX3401-2 closer to the WX3401-1.
Link (with a wired connection) 	Green	On	The Ethernet cable is connected to the LAN port on the WX3401-2.
WiFi 	Green	On	The 2.4G/5G WiFi is ready.
		Slow Blinking	The WPS is in process.
		Fast Blinking	The WX3401-2 is transmitting/receiving WiFi data.
		Off	The 2.4G/5G WiFi is disabled.

- 10 Now you can connect your wireless clients to your wireless Mesh network. To do this, note the SSID and wireless key printed on the side label of the WX3401-1 using this SSID.

4.4 Use the MPro Mesh App to Manage Your Mesh Network

You can manage your controller (the WX3401-1 or a Zyxel MPro Mesh Router) and their WiFi settings through the MPro Mesh app.

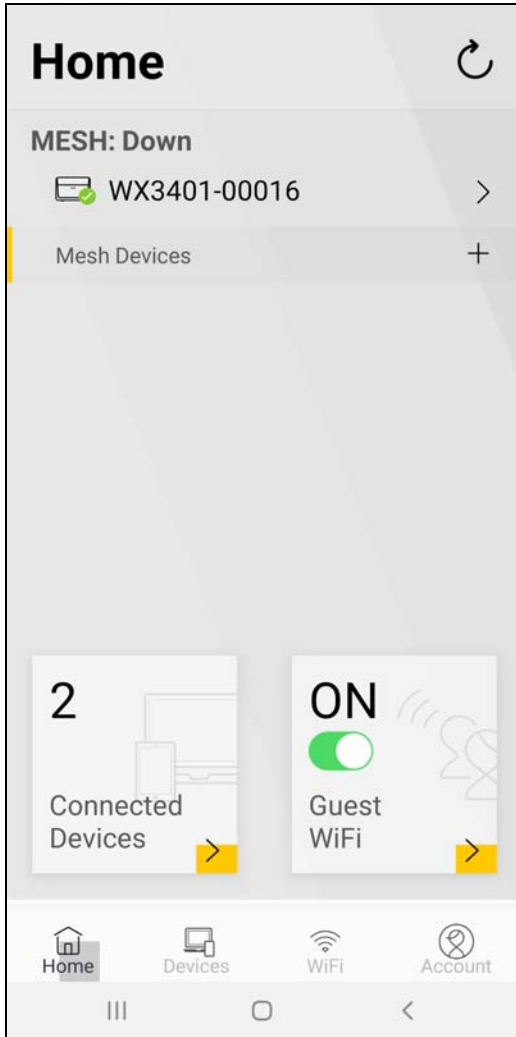

Please note that if you are using a wireless connection with a Zyxel MPro Mesh Router (see [Section 4.3.1 on page 31](#)), you must connect your smartphone to the Zyxel MPro Mesh Router to manage the Mesh network through the app. This is because the Zyxel MPro Mesh Router is the wireless controller.

If you are using a wired connection with a non-MPro Mesh Router (see [Section 4.3.2 on page 36](#)), you must connect your smartphone to the WX3401-1 to manage the Mesh network through the app. This is because the WX3401-1 is the wireless controller.

4.4.1 Home Screen

Use this screen to view the navigation panel and the status of your WX3401-B0.

Tap on **Home** in the navigation panel to open the following screen.

4.4.2 Gateway Detail Screen

Use this screen to view basic information of your controller (Zyxel MPro Mesh Router or the WX3401-1).

Tap on the  icon next to the model name **WX3401-00016** to open the following screen.

Tap on the  icon to change the model name shown on the app.

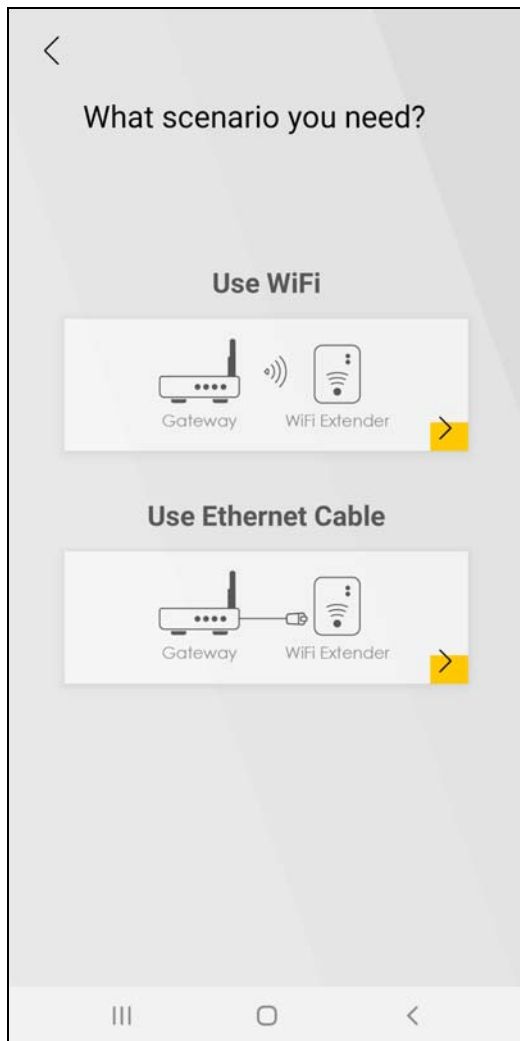

Tap the  icon to save the changes made. Tap on **Reboot** at the bottom left corner to restart your device.

4.4.3 Add Mesh Screen

Use this screen to add extenders or APs to your network to form a daisy chain (for more information on daisy chain, see [Section 1.3 on page 13](#)).

On the **Home** screen, tap on the **+** icon to open the following screen.

To add an extender to your network wirelessly:

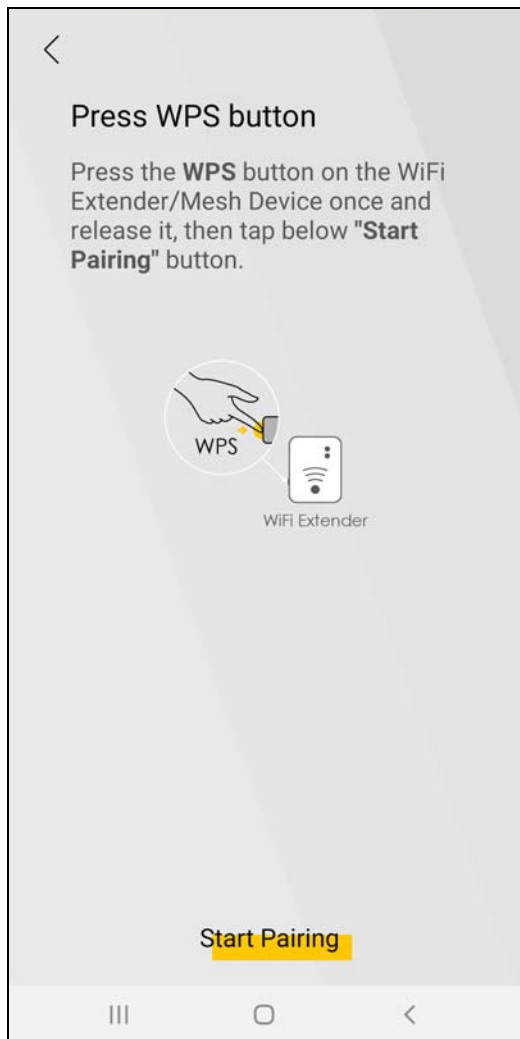

- 1 Tap on the  icon under **Use WiFi**.
- 2 The following screen appears. Follow the instruction to set your device to the Repeater mode. Then click **Next** to go to the next step.

Note: You can tap on **See Tips** on the top right corner to see instruction for finding ideal places to set up your devices.

Note: Your device may not have a mode switch. The method for setting modes for your device may vary depending on the device you use. For WX3401-B0, its mode depends on its uplink connection, see [Section 1.1 on page 11](#) for more information.

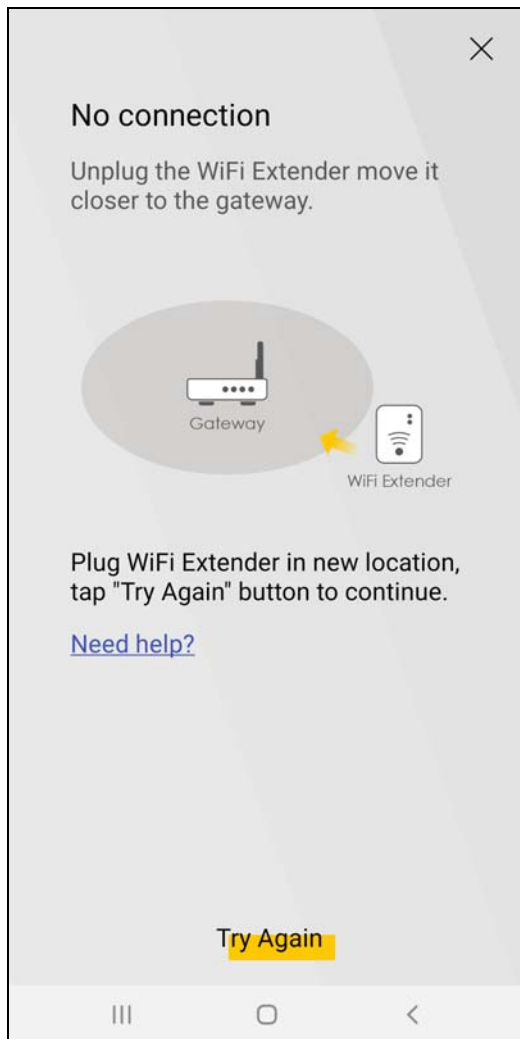

- 3 The following screen appears. Follow the instruction and click **Start Pairing** to connect your devices through WPS button.

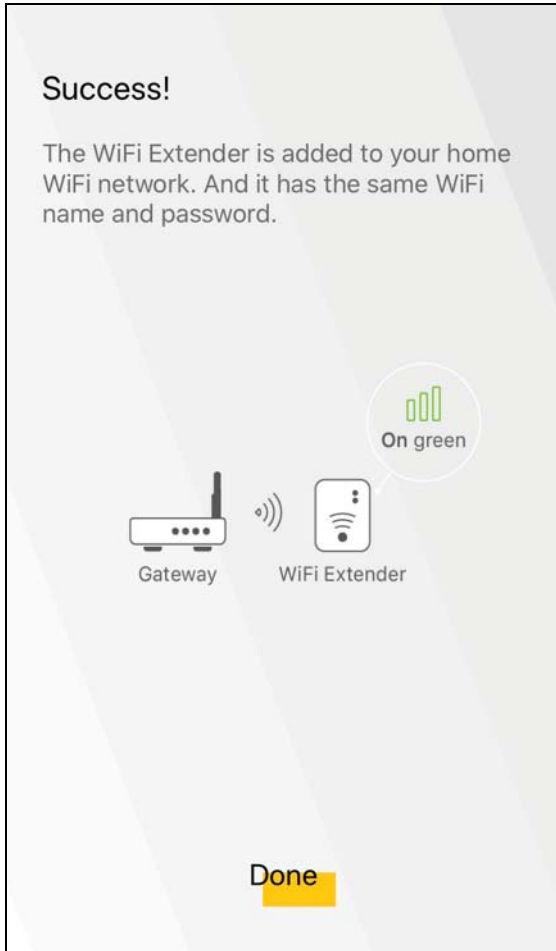

- 4 The following screen appears. Wait for the WX3401-B0 to connect to the MPro Mesh Router through the WPS method.

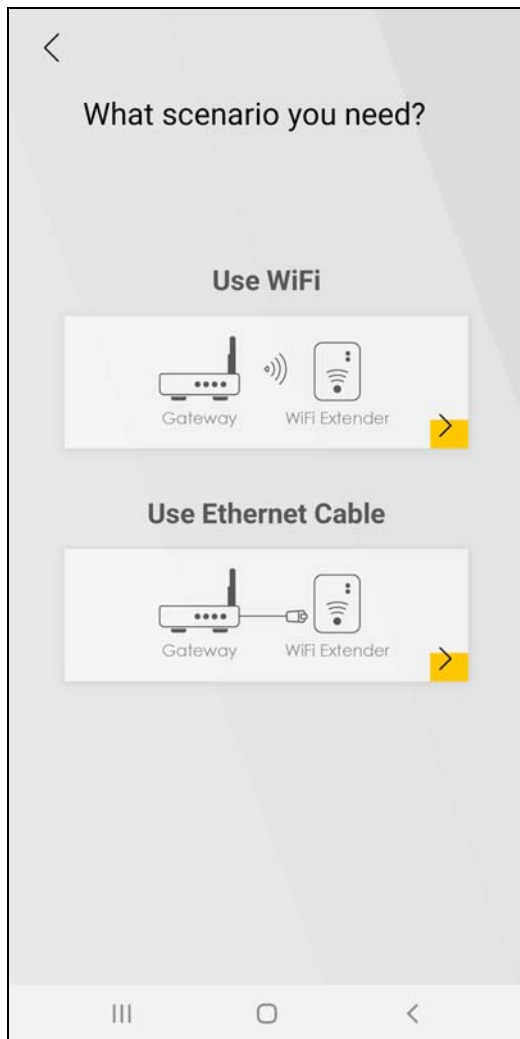

- 5 The following screen appears if the connection fails. Tap on **Need help** to see possible reasons for the connection failure or tap on **Try Again** to try connecting your devices through WPS button once more.

- 6 The following screen appears if the WX3401-B0 is connected to the MPro Mesh Router successfully.

To add an extender to your network with an Ethernet cable:

- 1 Tap on the  icon under **Use Ethernet Cable**.
- 2 The following screen shows. Follow the instruction to set your device to the AP mode. Then click **Done** to go back to the Home page.

4.5 Devices Screen

Use this screen to view clients that are connected to the WX3401-B0 and their link quality. You can tap on the search icon  to search for a certain client.

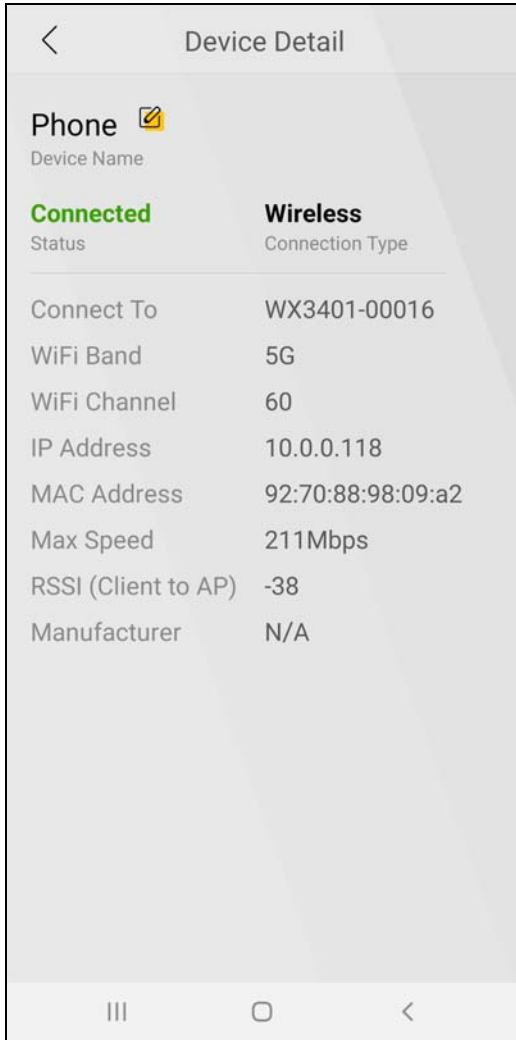

Tap on **Devices** in the navigation panel to open the following screen.

4.5.1 Device Detail Screen

Use this screen to view basic information of the client connected to the WX3401-B0 and block Internet access to it.

Tap on the  icon to open the following screen.

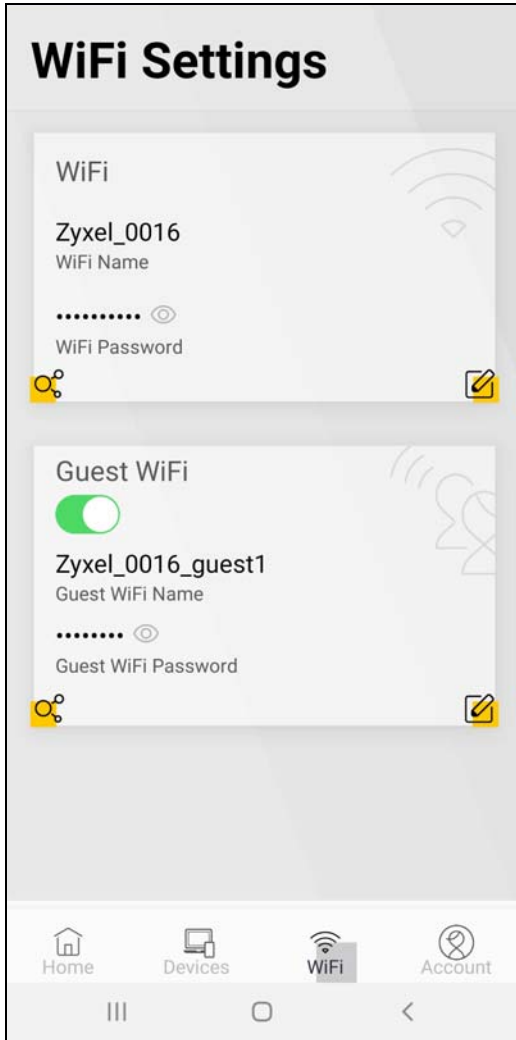

Tap on the  icon to change the name of your device shown on the app.

4.6 WiFi Settings Screen

Use this screen to configure settings for your wireless network. For more information on Guest WiFi, see [Section 4.7 on page 60](#).

Tap on **WiFi** in the navigation panel to open the following screen.

Tap on the  icon to show the QR code for connecting a WiFi client to the WX3401-B0.

Tap on the  icon to open the following screen. Use this screen to edit the SSID (WiFi name) and password for your WiFi network.

Tap on **Save** to save your changes, or tap on **Cancel** to go back to the previous screen.

4.7 Guest WiFi Settings Screen

Use this screen to configure guest WiFi settings. Slide the Guest WiFi switch to the right  to enable guest WiFi.

A WiFi guest client is not allowed to connect to the WX3401-B0 using a QR code. Tap on the  icon and the following screen appears.

Tap on the  icon to open the following screen. Use this screen to edit the SSID (WiFi Guest name) and password for your wireless network.

Note: If you disable your guest WiFi, be sure to connect to the WX3401-1 to manage your WiFi settings.

Tap on **Save** to save your changes, or tap on **Cancel** to go back to the previous screen.

4.8 Account Screen

Use this screen to logout or view the app version and privacy policy.

4.9 Setting Up a Secure Wireless Network

Thomas wants to set up a wireless network so that he can use his notebook to access the Internet. In this wireless network, the WX3401-B0 serves as an access point (AP), and the notebook is the wireless client. The wireless client can access the Internet through the AP.

Thomas has to configure the wireless network settings on the WX3401-B0. Then he can set up a wireless network using WPS ([Section 4.9.2 on page 66](#)) or manual configuration ([Section 4.9.3 on page 67](#)).

4.9.1 Configuring the Wireless Network Settings

This example uses the following parameters to set up a wireless network.

SSID	Example
Security Mode	WPA2-PSK
Pre-Shared Key	DoNotStealMyWirelessNetwork
802.11 Mode	802.11b/g/n/ax Mixed

- 1 Click **Network Setting > Wireless** to open the **General** screen. Select **More Secure** as the security level and **WPA2-PSK** as the security mode. Configure the screen using the provided parameters (see [page 64](#)). Click **Apply**.

General Guest/More AP MAC Authentication WPS WMM **Others** Channel Status

Use this screen to configure advanced wireless settings additional security settings, power saving, and data transmission settings.

Output Power 100%

Beacon Interval 100 ms

DTIM Interval 1 ms

802.11 Mode 802.11b/g/n/ax Mixed

Protected Management Frames Capable

Cancel Apply

Thomas can now use the WPS feature to establish a wireless connection between his notebook and the WX3401-B0 (see [Section 4.9.2 on page 66](#)). He can also use the notebook's wireless client to search for the WX3401-B0 (see [Section 4.9.2 on page 66](#)).

4.9.2 Using WPS

This section gives you an example of how to set up a wireless network using WPS. This example uses the WX3401-B0 as the AP and a WPS-enabled Android smartphone as the wireless client.

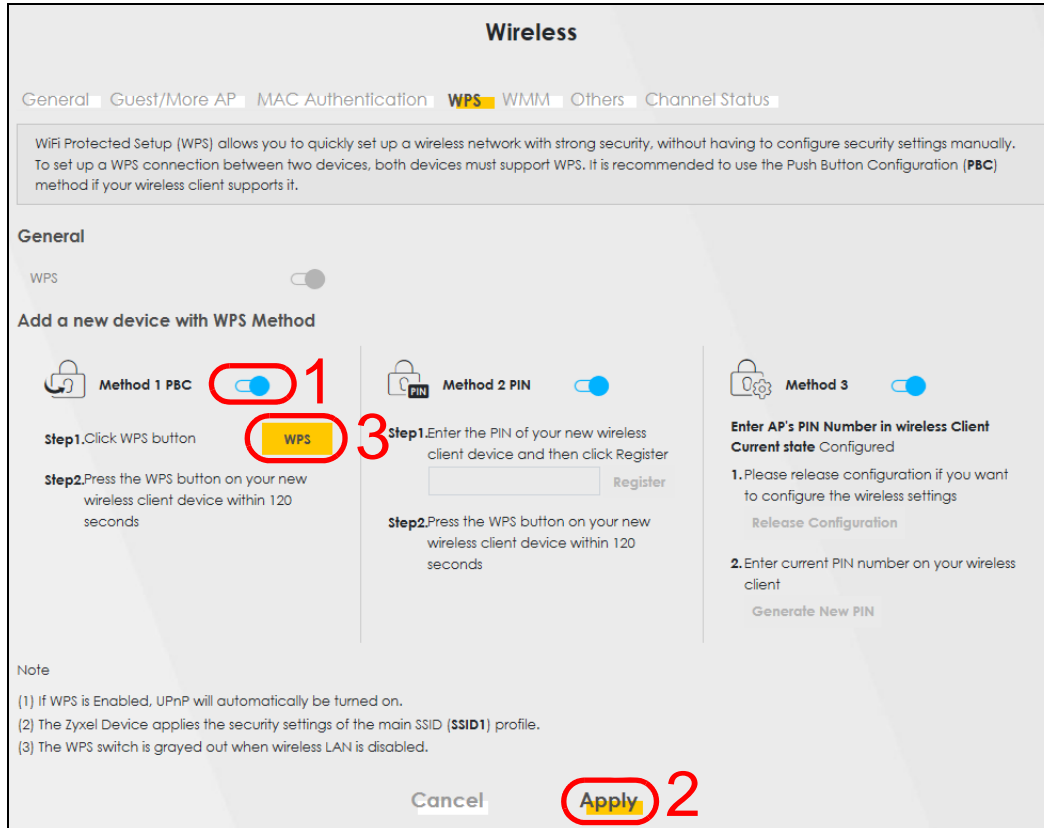

There are two WPS methods for creating a secure connection. This tutorial shows you how to do both.

- **Push Button Configuration (PBC)** - create a secure wireless network simply by pressing a button. This is the easier method.
- **PIN Configuration** - create a secure wireless network simply by entering a wireless client's PIN (Personal Identification Number) in the WX3401-B0's interface. This is the more secure method, since one device can authenticate the other.

Note: When using WPS in the Web Configurator, and depending on your **Band** selection (2.4GHz or 5GHz), the secure connection will apply for the selected **Band** only.

Push Button Configuration (PBC)

- 1 Make sure that your WX3401-B0 is turned on and your notebook is within the cover range of the wireless signal.
- 2 Push and hold the **WPS** button located on the WX3401-B0's front panel for one second. Alternatively, you may log into the WX3401-B0's Web Configurator and go to the **Network Setting > Wireless > WPS** screen. Enable the WPS function for method 1 and click **Apply**. Then click the **WPS** button.

4.9.3 Without WPS

Use the wireless adapter's utility installed on the notebook to search for the "Example" SSID. Then enter the "DoNotStealMyWirelessNetwork" pre-shared key to establish a wireless Internet connection.

Note: The WX3401-B0 supports IEEE 802.11a/b/g/n/ac/ax wireless clients. Make sure that your notebook or computer's wireless adapter supports one of these standards.

4.10 Setting Up Multiple Wireless Groups

Company A wants to create different wireless network groups for different types of users as shown in the following figure. Each group has its own SSID and security mode.

- Employees in Company A will use a general **Company** wireless network group.
- Higher management level and important visitors will use the **VIP** group.
- Visiting guests will use the **Guest** group, which has a different SSID and password.

Company A will use the following parameters to set up the wireless network groups.

	COMPANY	VIP	GUEST
SSID	Company	VIP	Guest
Security Level	More Secure	More Secure	More Secure
Security Mode	WPA2-PSK	WPA2-PSK	WPA2-PSK
Pre-Shared Key	ForCompanyOnly	123456789	guest123

- 1 Click **Network Setting > Wireless** to open the **General** screen. Use this screen to set up the company's general wireless network group. Configure the screen using the provided parameters and click **Apply**.

Use this screen to create Guest and additional wireless networks with different security settings.

Note: The Guest SSID (**Wireless Network Name**) depends on the state of the Main SSID. For example, when the 2.4GHz Main SSID is enabled, then the 2.4GHz Guest SSID can be enabled. But when the 2.4GHz Main SSID is disabled, then the 2.4GHz Guest SSID is automatically disabled (cannot be enabled by the user).

- 4 In the **Guest/More AP** screen, click the **Edit** icon to configure the third wireless network group. Configure the screen using the provided parameters and click **Apply**.

- 5 Check the status of **VIP** and **Guest** in the **Guest/More AP** screen. The yellow bulbs signify that the SSIDs are active and ready for wireless access.

Technical Reference

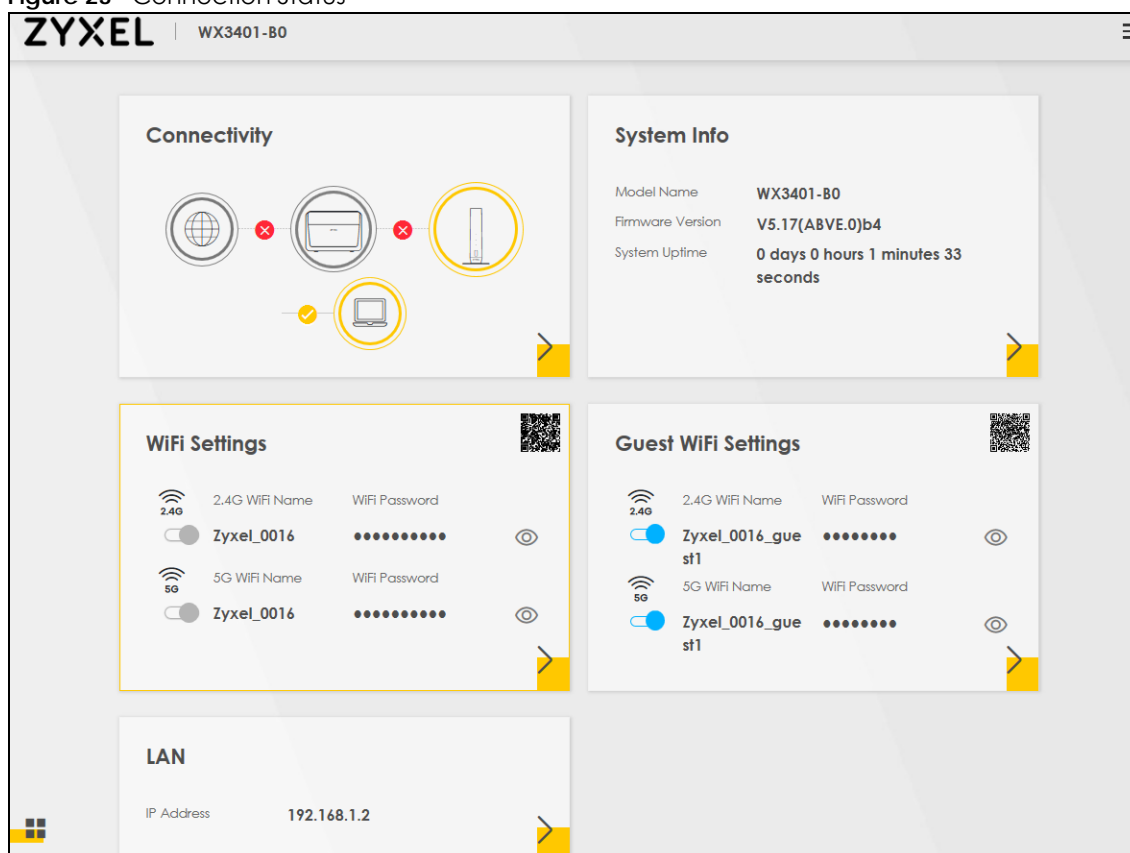

CHAPTER 5

Connection Status

5.1 Overview

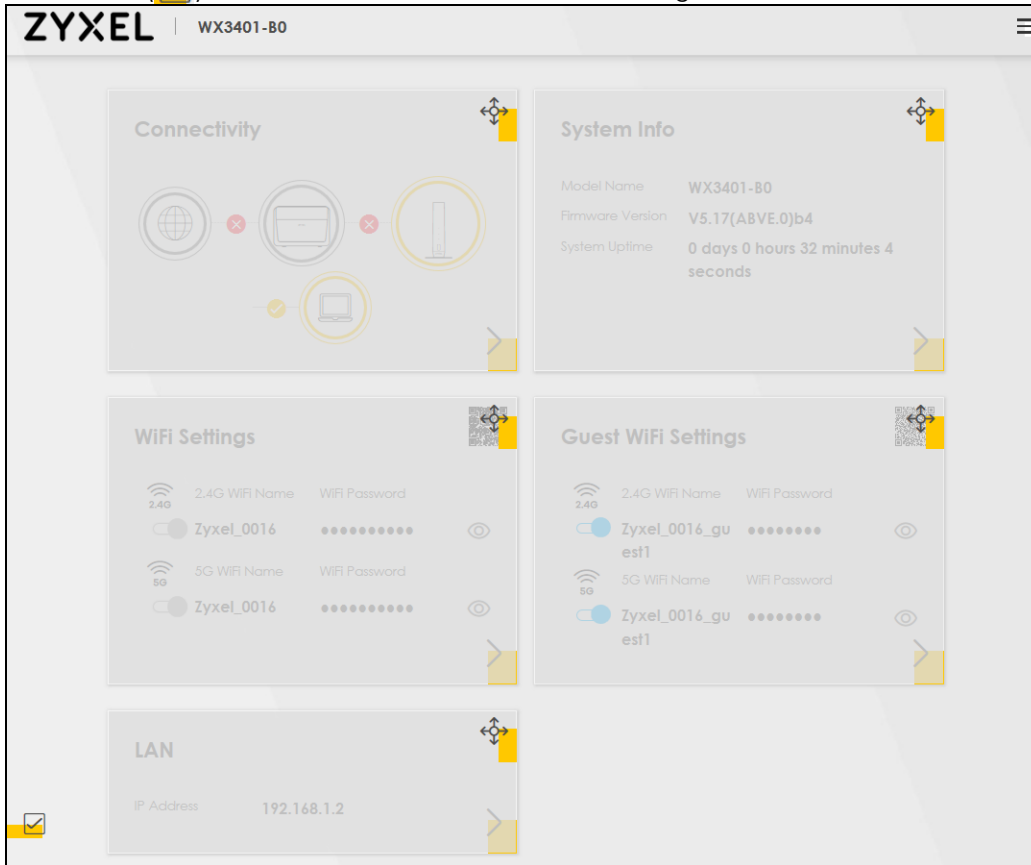

After you log into the Web Configurator, the **Connection Status** screen appears. You can configure basic Internet access and wireless settings in this screen. It also shows the network status of the WX3401-B0 and computers/devices connected to it.

Figure 23 Connection Status

5.1.1 Layout Icon

Click this icon () to arrange the screen order. Select a block and hold it to move around. Click the Check icon () in the lower left corner to save the changes.

5.1.2 Connectivity

Use this screen to view the network connection status of the WX3401-B0 and its clients.

Figure 24 Connectivity

Click the Arrow icon () to open the following screen. Use this screen to view IP addresses and MAC addresses of the wireless and wired devices connected to the WX3401-B0.

Place your mouse within the device block, and an Edit icon () will appear. Click the Edit icon to change the icon and name of a connected device.

Figure 25 Connectivity: Connected Devices

Icon and Device Name

You can change the icon and name of a connected device by clicking the device's Edit icon. Select an icon and/or enter a name in the **Device Name** field for a connected device. Click **Save** to save your changes.

5.1.3 System Info

Use this screen to view the basic system information of the WX3401-B0.

Figure 27 System Info

Click the Arrow icon () to open the following screen. Use this screen to view more information on the status of your firewall and interfaces (LAN, and WiFi).

Figure 28 System Info: Detailed Information

Each field is described in the following table.

Table 7 System Info: Detailed Information

LABEL	DESCRIPTION
Host Name	This field displays the WX3401-B0 system name. It is used for identification.
Model Name	This shows the model number of your WX3401-B0.
Serial Number	This field displays the serial number of the WX3401-B0.
Firmware Version	This is the current version of the firmware on the WX3401-B0.
System Uptime	This field displays how long the WX3401-B0 has been running since it last started up. The WX3401-B0 starts up when you plug it in, when you restart it (Maintenance > Reboot), or when you reset it.
Interface Status	
Virtual ports are shown here. You can see whether the ports are in use and their transmission rate.	
LAN Information (These fields display information about the LAN ports.)	
IP Address	This is the current IPv4 address of the WX3401-B0 in the LAN.
Subnet Mask	This is the current subnet mask in the LAN.
IPv6 Address	This is the current IPv6 address of the WX3401-B0 in the LAN.
IPv6 Link Local Address	This field displays the current link-local address of the WX3401-B0 for the LAN interface.
MAC Address	This field displays the LAN Ethernet adapter MAC (Media Access Control) address of your WX3401-B0.
WLAN Information 2.4G/5G	

Table 7 System Info: Detailed Information (continued)

LABEL	DESCRIPTION
MAC Address	This shows the wireless adapter MAC (Media Access Control) address of the wireless interface.
Status	This displays whether WiFi is activated.
SSID	This is the descriptive name used to identify the WX3401-B0 in a wireless LAN.
Channel	This is the channel number used by the wireless interface now.
Security	This displays the type of security mode the wireless interface is using in the wireless LAN.
802.11 Mode	This displays the type of 802.11 mode the wireless interface is using in the wireless LAN.
WPS	This displays whether WPS is activated on the wireless interface.

5.2 WiFi Settings

Use this screen to configure the main 2.4G and/or 5G wireless network settings. The main 2.4G and/or 5G is enabled by default and not configurable. The switch goes to the right and grayed out (), and the function is enabled. You can use this screen or the QR code on the upper right corner to check the SSIDs (WiFi network name) and passwords of the main wireless networks. If you want to show or hide your WiFi passwords, click the Eye icon ().

Figure 29 WiFi Settings

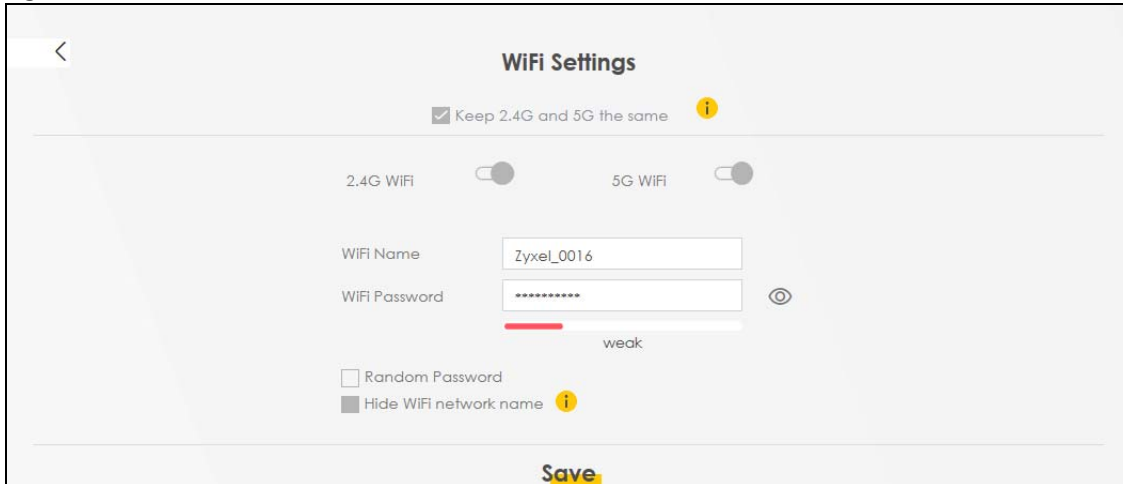

Click the Arrow icon () to open the following screen. Use this screen to configure the SSIDs and/or passwords for your main wireless networks. The main 2.4G and/or 5G is enabled by default and not configurable. The switch goes to the right and grayed out (), and the function is enabled. Select **Keep 2.4G and 5G the same** to use the same SSID for 2.4 GHz and 5 GHz bands.

Figure 30 WiFi Settings: Configuration

Each field is described in the following table.

Table 8 WiFi Settings: Configuration

LABEL	DESCRIPTION
Keep 2.4G and 5G the same	Select this and the 2.4G and 5G wireless networks will use the same SSID. If you deselect this, the screen will change. You need to assign different SSIDs for the 2.4G and 5G wireless networks.
2.4G/5G WIFI	Click this switch to enable or disable the 2.4G and/or 5G wireless networks. When the switch goes to the right (), the function is enabled. Otherwise, it is not.
WiFi Name	The SSID (Service Set IDentity) identifies the service set with which a wireless device is associated. Wireless devices associating to the access point (AP) must have the same SSID. Enter a descriptive name (up to 32 English keyboard characters) for WiFi.
WiFi Password	If you selected Random Password , this field displays a pre-shared key generated by the WX3401-B0. If you did not select Random Password , you can manually type a pre-shared key from 8 to 64 case-sensitive keyboard characters.
	Click the Eye icon to show or hide the password for your wireless network. When the Eye icon is slashed  , you'll see the password in plain text. Otherwise, it is hidden.
Random Password	Select this option to have the WX3401-B0 automatically generate a password. The WiFi Password field will not be configurable when you select this option.
Hide WiFi Name	Select this check box to hide the SSID in the outgoing beacon frame so a station cannot obtain the SSID through scanning using a site survey tool. Note: Disable WPS in the Network Setting > Wireless > WPS screen to hide the SSID.
Save	Click Save to save your changes.

5.3 Guest WiFi Settings

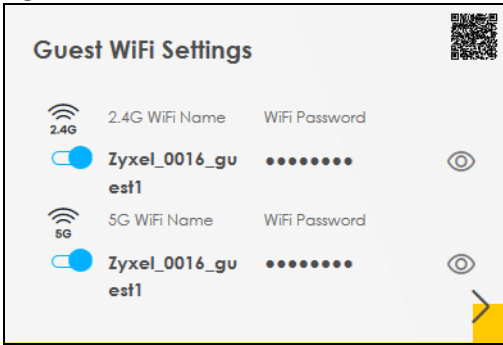

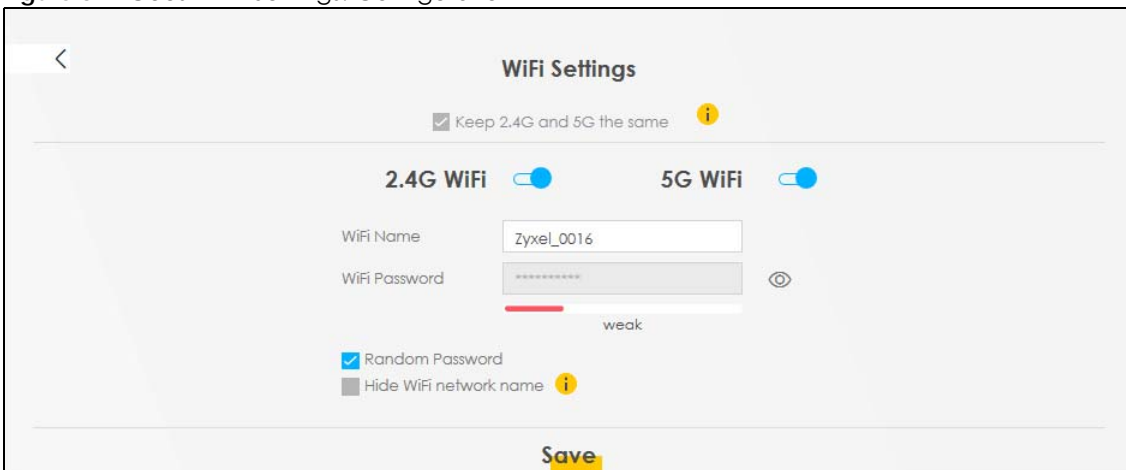

Use this screen to enable or disable the guest 2.4G and/or 5G wireless networks. When the switch goes to the right (), the function is enabled. Otherwise, it is not. You can check their SSIDs (WiFi network name) and passwords from this screen. If you want to show or hide your WiFi passwords, click the Eye icon.

Figure 31 Guest WiFi Settings

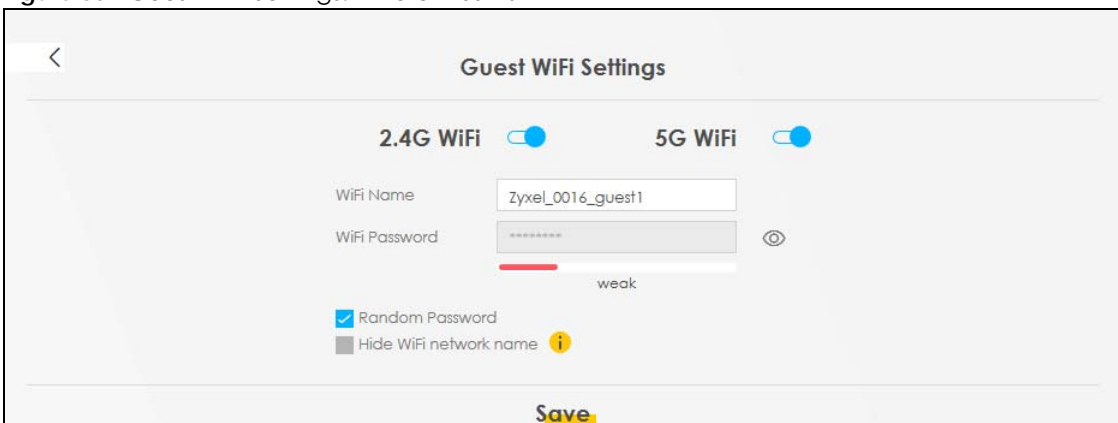

Click the Arrow icon (➤) to open the following screen. Use this screen to configure the 2.4G and 5G SSIDs and/or passwords for your guest wireless networks.

Figure 32 Guest WiFi Settings: Configuration

To assign different SSIDs to the 2.4G and 5G guest wireless networks, clear the **Keep 2.4G and 5G the same** check box in the **WiFi Settings** screen, and the **Guest WiFi Settings** screen will change.

Figure 33 Guest WiFi Settings: Different SSIDs

Each field is described in the following table.

Table 9 WiFi Settings: Configuration

LABEL	DESCRIPTION
WiFi 2.4G/5G WiFi	Click this switch to enable or disable the 2.4G and/or 5G wireless networks. When the switch goes to the right  , the function is enabled. Otherwise, it is not.
WiFi Name	The SSID (Service Set IDentity) identifies the service set with which a wireless device is associated. Wireless devices associating to the access point (AP) must have the same SSID. Enter a descriptive name (up to 32 English keyboard characters) for WiFi.
WiFi Password	If you selected Random Password , this field displays a pre-shared key generated by the WX3401-B0. If you did not select Random Password , you can manually type a pre-shared key from 8 to 64 case-sensitive keyboard characters.
	Click the Eye icon to show or hide the password of your wireless network. When the Eye icon is slashed  , you'll see the password in plain text. Otherwise, it is hidden.
Random Password	Select this option to have the WX3401-B0 automatically generate a password. The WiFi Password field will not be configurable when you select this option.
Hide WiFi Name	Select this check box to hide the SSID in the outgoing beacon frame so a station cannot obtain the SSID through scanning using a site survey tool. Note: Disable WPS in the Network Setting > Wireless > WPS screen to hide the SSID.
Save	Click Save to save your changes.

5.4 LAN Settings

Use this screen to view the LAN IP address and subnet mask of your WX3401-B0.

Figure 34 LAN

Click the Arrow icon () to open the following screen. Use this screen to configure the LAN IP address and subnet mask for your WX3401-B0.

Figure 35 LAN Setup

Each field is described in the following table.

Table 10 Status Screen

LABEL	DESCRIPTION
LAN IP Setup	
IP Address	Enter the LAN IPv4 address you want to assign to your WX3401-B0 in dotted decimal notation, for example, 192.168.1.2 (factory default).
Subnet Mask	Type the subnet mask of your network in dotted decimal notation, for example 255.255.255.0 (factory default). Your WX3401-B0 automatically computes the subnet mask based on the IP address you enter, so do not change this field unless you are instructed to do so.
Save	Click Save to save your changes.

CHAPTER 6

Wireless

6.1 Wireless Overview

This chapter describes the WX3401-B0's **Network Setting > Wireless** screens. Use these screens to set up your WX3401-B0's WiFi connection and security settings.

6.1.1 What You Can Do in this Chapter

This section describes the WX3401-B0's **Wireless** screens. Use these screens to set up your WX3401-B0's wireless connection.

- Use the **General** screen to enable WiFi, enter the SSID and select the wireless security mode ([Section 6.2 on page 83](#)).
- Use the **Guest/More AP** screen to set up multiple wireless networks on your WX3401-B0 ([Section 6.3 on page 88](#)).
- Use the **MAC Authentication** screen to allow or deny wireless clients based on their MAC addresses from connecting to the WX3401-B0 ([Section 6.4 on page 90](#)).
- Use the **WPS** screen to enable or disable WPS, view or generate a security PIN (Personal Identification Number) ([Section 6.5 on page 92](#)).
- Use the **WMM** screen to enable WiFi MultiMedia (WMM) to ensure quality of service in wireless networks for multimedia applications ([Section 6.6 on page 94](#)).
- Use the **Others** screen to configure wireless advanced features, such as the DTIM interval ([Section 6.7 on page 95](#)).
- Use the **Channel Status** screen to scan WiFi channel noises and view the results ([Section 6.8 on page 97](#)).
- Use the **Operating Modes** screen to manually enter the SSID and security settings of the AP to which you want the WX3401-B0 to connect ([Section 6.9 on page 98](#)).
- Use the **AP List** screen to scan the wireless networks in the WX3401-B0's area. You can also select an AP from the list and enter its WiFi password to connect to the wireless network ([Section 6.10 on page 100](#)).

6.1.2 What You Need to Know

Wireless Basics

"Wireless" is essentially radio communication. In the same way that walkie-talkie radios send and receive information over the airwaves, wireless networking devices exchange information with one another. A wireless networking device is just like a radio that lets your computer exchange information with radios attached to other computers. Like walkie-talkies, most wireless networking devices operate at radio frequency bands that are open to the public and do not require a license to use. However, wireless networking is different from that of most traditional radio communications in that there are a number of wireless networking standards available with different methods of data encryption.

WiFi6 / IEEE 802.11ax

WiFi6 is backwards compatible with IEEE 802.11a/b/g/n/ac and is most suitable in areas with a high concentration of users. WiFi6 devices support Target Wakeup Time (TWT) allowing them to automatically power down when they are inactive.

The following table displays the comparison of the different WiFi standards.

WIFI STANDARD	MAXIMUM LINK RATE *	BAND	SIMULTANEOUS CONNECTIONS
802.11b	11 Mbps	2.4 GHz	1
802.11a/g	54 Mbps	2.4 GHz and 5 GHz	1
802.11n	600 Mbps	2.4 GHz and 5 GHz	1
802.11ac	6.93 Gbps	5 GHz	4
802.11ax	2.4 Gbps	2.4 GHz	128
	9.61 Gbps	5 GHz and 6 GHz	

* The maximum link rate is for reference under ideal conditions only.

6.2 Wireless General Settings

Use this screen to enable WiFi, enter the SSID and select the wireless security mode. These are basic elements for starting a wireless service. It's recommended that you select **More Secure** to enable **WPA2-PSK** data encryption.

Note: If you are configuring the WX3401-B0 from a computer connected to WiFi and you change the WX3401-B0's SSID, channel or security settings, you will lose your wireless connection when you press **Apply** to confirm. You must then change the wireless settings of your computer to match the WX3401-B0's new settings.

Click **Network Setting > Wireless** to open the **General** screen.

Figure 36 Network Setting > Wireless > General

General Guest/More AP MAC Authentication WPS WMM Others Channel Status

Use this screen to enable the Wireless LAN, enter the SSID and select the wireless security mode. These are basic elements for starting a wireless service. It's recommended that you select **More Secure** to enable **WPA2-PSK** data encryption.

The following table describes the general WiFi labels in this screen.

Table 11 Network Setting > Wireless > General

LABEL	DESCRIPTION
Wireless	
Wireless	Select Keep the same settings for 2.4G and 5G wireless networks and the 2.4 GHz and 5 GHz wireless networks will use the same SSID and wireless security settings.
Wireless Network Setup	
Band	This shows the wireless band which this radio profile is using. 2.4GHz is the frequency used by IEEE 802.11b/g/n/ax wireless clients while 5GHz is used by IEEE 802.11a/n/ac/ax wireless clients. Note: The Operating Modes and AP List screen are only available if you select the 5GHz Band .

Table 11 Network Setting > Wireless > General (continued)

LABEL	DESCRIPTION
Wireless	Click this switch to enable or disable WiFi in this field. When the switch turns blue  , the function is enabled. Otherwise, it is not.
Channel	<p>Select a channel from the drop-down list box. The options vary depending on the frequency band and the country you are in.</p> <p>Use Auto to have the WX3401-B0 automatically determine a channel to use.</p>
Bandwidth	<p>Select whether the WX3401-B0 uses a wireless channel width of 20MHz, 40MHz, 20/40MHz, 20/40/80MHz, or 20/40/80/160MHz.</p> <p>Note: 20/40/80MHz and 20/40/80/160MHz are available if you select the 5GHz Band; 40MHz is available if you select the 2.4GHz Band.</p> <p>A standard 20MHz channel offers transfer speeds of up to 150Mbps whereas a 40MHz channel uses two standard channels and offers speeds of up to 300 Mbps.</p> <p>40 MHz (channel bonding or dual channel) bonds two adjacent radio channels to increase throughput. A 80 MHz channel consists of two adjacent 40 MHz channels. The wireless clients must also support 40 MHz or 80 MHz. It is often better to use the 20 MHz setting in a location where the environment hinders the wireless signal.</p> <p>A standard 20 MHz channel offers transfer speeds of up to 150 Mbps whereas a 40 MHz channel uses two standard channels and offers speeds of up to 300 Mbps.</p> <p>40 MHz (channel bonding or dual channel) bonds two adjacent radio channels to increase throughput. The wireless clients must also support 40 MHz. It is often better to use the 20 MHz setting in a location where the environment hinders the wireless signal.</p> <p>An 80 MHz channel groups adjacent 40 MHz channels into pairs to increase bandwidth even higher.</p> <p>Select 20MHz if you want to lessen radio interference with other wireless devices in your neighborhood or the wireless clients do not support channel bonding.</p> <p>Because not all devices support 40 MHz channels, select 20MHz or 20/40MHz to allow the WX3401-B0 to adjust the channel bandwidth.</p>
Control Sideband	This is available for some regions when you select a specific channel and set the Bandwidth field to 40MHz or 20/40MHz . Set whether the control channel (set in the Channel field) should be in the Lower or Upper range of channel bands.
Wireless Network Settings	
Wireless Network Name	<p>The SSID (Service Set IDentity) identifies the service set with which a wireless device is associated. Wireless devices associating to the access point (AP) must have the same SSID.</p> <p>Enter a descriptive name (up to 32 English keyboard characters) for WiFi.</p>
Max Clients	Specify the maximum number of clients that can connect to this network at the same time.
Hide SSID	<p>Select this check box to hide the SSID in the outgoing beacon frame so a station cannot obtain the SSID through scanning using a site survey tool.</p> <p>This check box is grayed out if the WPS function is enabled in the Network Setting > Wireless > WPS screen.</p>
Multicast Forwarding	Select this check box to allow the WX3401-B0 to convert wireless multicast traffic into wireless unicast traffic.
BSSID	This shows the MAC address of the wireless interface on the WX3401-B0 when WiFi is enabled.
Security Level	

Table 11 Network Setting > Wireless > General (continued)

LABEL	DESCRIPTION
Security Mode	Select More Secure (Recommended) to add security on this wireless network. The wireless clients which want to associate to this network must have same wireless security settings as the WX3401-B0. When you select to use a security, additional options appears in this screen. Or you can select No Security to allow any client to associate this network without any data encryption or authentication. See the following sections for more details about this field.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

6.2.1 No Security

Select **No Security** to allow wireless stations to communicate with the WX3401-B0 without any data encryption or authentication.

Note: If you do not enable any wireless security on your WX3401-B0, your network is accessible to any wireless networking device that is within range.

Figure 37 Wireless > General: No Security

The following table describes the labels in this screen.

Table 12 Wireless > General: No Security

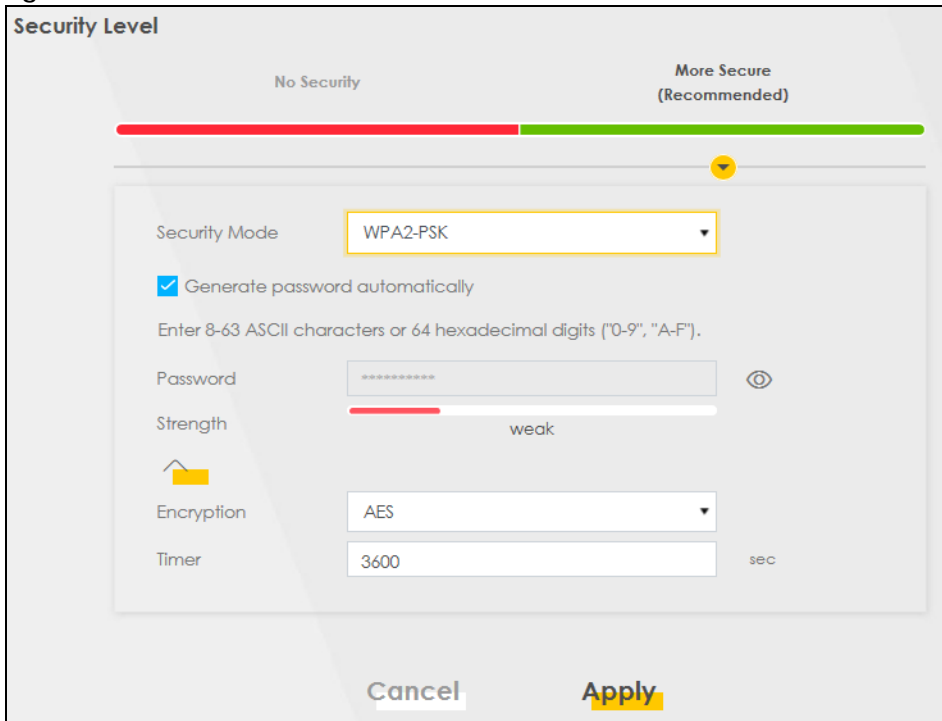

LABEL	DESCRIPTION
Security Level	Choose No Security to allow all wireless connections without data encryption or authentication.

6.2.2 More Secure (Recommended)

The WPA-PSK security mode provides both improved data encryption and user authentication over WEP. Using a Pre-Shared Key (PSK), both the WX3401-B0 and the connecting client share a common password in order to validate the connection. This type of encryption, while robust, is not as strong as WPA, WPA2 or even WPA2-PSK. The WPA2-PSK security mode is a newer, more robust version of the WPA encryption standard. It offers slightly better security, although the use of PSK makes it less robust than it could be.

Click **Network Setting > Wireless** to display the **General** screen. Select **More Secure** as the security level. Then select **WPA2-PSK**, **WPA3-SAE** or **WPA3-SAE/WPA2-PSK** from the **Security Mode** list.

Figure 38 Wireless > General: More Secure: WPA2-PSK

The following table describes the labels in this screen.

Table 13 Wireless > General: More Secure: WPA2-PSK

LABEL	DESCRIPTION
Security Level	Select More Secure to enable WPA2-PSK data encryption.
Security Mode	Select the data encryption method the WX3401-B0 uses. Select WPA2-PSK , WPA3-SAE or WPA3-SAE/WPA2-PSK to add security on this wireless network. The wireless clients which want to associate to this network must have same wireless security settings as this device. Or you can select No Security to allow any client to associate this network without authentication.
Generate password automatically	Select this option to have the WX3401-B0 automatically generate a password. The password field will not be configurable when you select this option.
Password	Select Generate password automatically or enter a Password . The password has two uses. 1. Manual. Manually enter the same password on the WX3401-B0 and the client. Enter 8-63 ASCII characters or exactly 64 hexadecimal ('0-9', 'a-f') characters. 2. WPS. When using WPS, the WX3401-B0 sends this password to the client. Click the Eye icon to show or hide the password of your wireless network. When the Eye icon is slashed  , you'll see the password in plain text. Otherwise, it is hidden.
	Click this  to show more fields in this section. Click again to hide them.
Encryption	This field shows the AES type of data encryption.
Timer	The Timer is the rate at which the RADIUS server sends a new group key out to all clients.

6.3 Guest/More AP

This screen allows you to configure a guest wireless network that allows access to the Internet only through the WX3401-B0. You can also configure additional wireless networks, each with different security settings, in this screen.

Click **Network Setting > Wireless > Guest/More AP**. The following screen displays.

The following table introduces the supported wireless networks.

Table 14 Supported Wireless Networks

WIRELESS NETWORKS	WHERE TO CONFIGURE
Main/1	Network Setting > Wireless > General screen
Guest/3	Network Setting > Wireless > Guest/More AP screen

Figure 39 Network Setting > Wireless > Guest/More AP

#	Status	SSID	Security	Guest WLAN	Modify
1		Zyxel_0016_guest1	WPA2-Personal	Home Guest	
2		Zyxel_0016_guest2	WPA2-Personal	Home Guest	
3		Zyxel_0016_guest3	WPA2-Personal	Home Guest	

The following table describes the labels in this screen.

Table 15 Network Setting > Wireless > Guest/More AP

LABEL	DESCRIPTION
#	This is the index number of the entry.
Status	This field indicates whether this SSID is active. A yellow bulb signifies that this SSID is active, while a gray bulb signifies that this SSID is not active.
SSID	An SSID profile is the set of parameters relating to one of the WX3401-B0's BSSs. The SSID (Service Set Identifier) identifies the Service Set with which a wireless device is associated. This field displays the name of the wireless profile on the network. When a wireless client scans for an AP to associate with, this is the name that is broadcast and seen in the wireless client utility.
Security	This field indicates the security mode of the SSID profile.
Guest WLAN	This displays if the guest WiFi function has been enabled for this wireless LAN. If Home Guest displays, clients can connect to each other directly. If External Guest displays, clients are blocked from connecting to each other directly. N/A displays if guest wireless LAN is disabled.
Modify	Click the Edit icon to configure the SSID profile.

6.3.1 Edit Guest/More AP Settings

Use this screen to create Guest and additional wireless networks with different security settings.

Click the **Edit** icon next to an SSID in the **Guest/More AP** screen. The following screen displays.

The following table describes the fields in this screen.

Table 16 Network Setting > Wireless > Guest/More AP > Edit

LABEL	DESCRIPTION
Wireless Network Setup	
Wireless	Click this switch to enable or disable WiFi in this field. When the switch turns blue  , the function is enabled; otherwise, it is not.
Wireless Network Settings	
Wireless Network Name	The SSID (Service Set Identity) identifies the service set with which a wireless device is associated. Wireless devices associating to the access point (AP) must have the same SSID. Enter a descriptive name (up to 32 English keyboard characters) for WiFi.
Hide SSID	Select this check box to hide the SSID in the outgoing beacon frame so a station cannot obtain the SSID through scanning using a site survey tool.
Guest WLAN	Select this to create Guest WiFi for home and external clients. Select the WiFi type in the Access Scenario field.

Table 16 Network Setting > Wireless > Guest/More AP > Edit (continued)

LABEL	DESCRIPTION
Access Scenario	If you select Home Guest , clients can connect to each other directly. If you select External Guest , clients are blocked from connecting to each other directly.
BSSID	This shows the MAC address of the wireless interface on the WX3401-B0 when WiFi is enabled.
Security Level	Select More Secure (Recommended) to add security on this wireless network. The wireless clients which want to associate to this network must have the same wireless security settings as the WX3401-B0. After you select to use a security, additional options appears in this screen. Or you can select No Security to allow any client to associate this network without any data encryption or authentication. See Section 6.2.1 on page 86 for more details about this field.
Security Mode	Select the security mode the WX3401-B0 uses. Select WPA2-PSK , WPA3-SAE or WPA3-SAE/WPA2-PSK to add security on this wireless network. The wireless clients which want to associate to this network must have same wireless security settings as this device. Or you can select No Security to allow any client to associate this network without authentication..
Generate password automatically	Select this option to have the WX3401-B0 automatically generate a password. The password field will not be configurable when you select this option.
Password	WPA2-PSK uses a simple common password, instead of user-specific credentials. If you did not select Generate password automatically , you can manually type a pre-shared key from 8 to 64 case-sensitive keyboard characters. Click the Eye icon to show or hide the password of your wireless network. When the Eye icon is slashed  , you'll see the password in plain text. Otherwise, it is hidden.
	Click this  to show more fields in this section. Click again to hide them.
Encryption	This field shows the AES type of data encryption.
Timer	The Timer is the rate at which the RADIUS server sends a new group key out to all clients.
Cancel	Click Cancel to exit this screen without saving any changes.
OK	Click OK to save your changes.

6.4 MAC Authentication

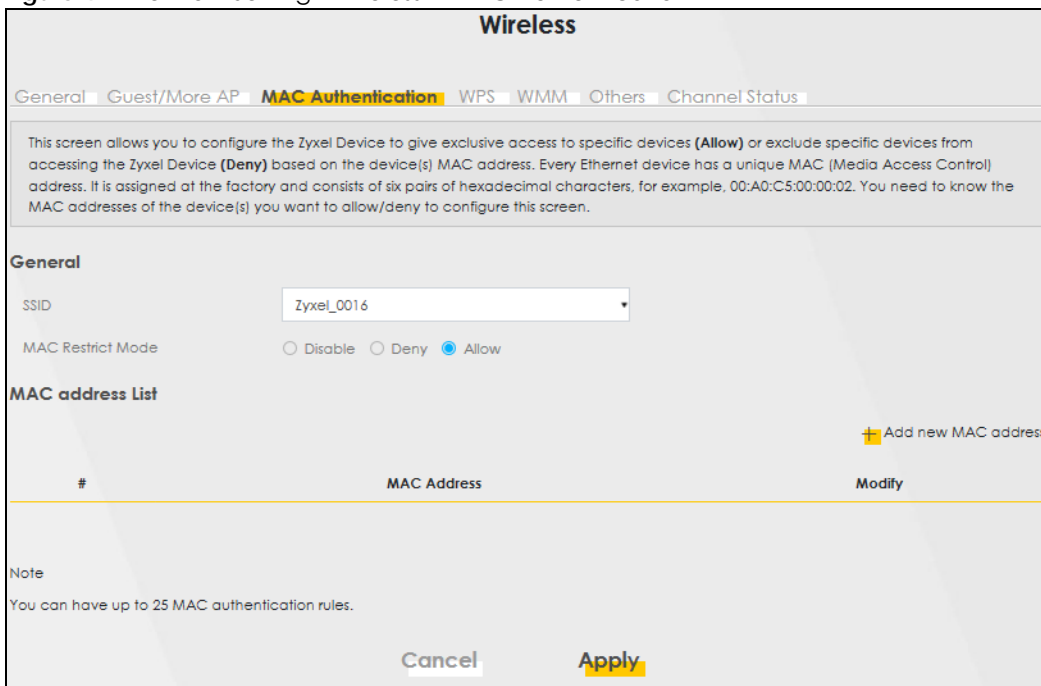

This screen allows you to configure the WX3401-B0 to give exclusive access to specific devices (**Allow**) or exclude specific devices from accessing the WX3401-B0 (**Deny**) based on the device(s) MAC address. Every Ethernet device has a unique MAC (Media Access Control) address. It is assigned at the factory and consists of six pairs of hexadecimal characters; for example, 00:A0:C5:00:00:02. You need to know the MAC addresses of the device(s) you want to allow/deny to configure this screen.

Note: You can have up to 25 MAC authentication rules.

Use this screen to view your WX3401-B0's MAC filter settings and add new MAC filter rules. Click **Network**

Setting > Wireless > MAC Authentication. The screen appears as shown.

Figure 41 Network Setting> Wireless > MAC Authentication

The following table describes the labels in this screen.

Table 17 Network Setting > Wireless > MAC Authentication

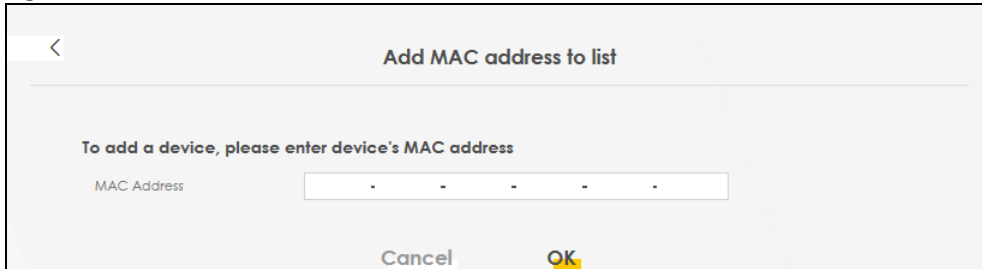

LABEL	DESCRIPTION
General	
SSID	Select the SSID for which you want to configure MAC filter settings.
MAC Restrict Mode	Define the filter action for the list of MAC addresses in the MAC Address table. Select Disable to turn off MAC filtering. Select Deny to block access to the WX3401-B0. MAC addresses not listed will be allowed to access the WX3401-B0. Select Allow to permit access to the WX3401-B0. MAC addresses not listed will be denied access to the WX3401-B0.
MAC Address List	
Add New MAC Address	This field is available when you select Deny or Allow in the MAC Restrict Mode field. Click this if you want to add a new MAC address entry to the MAC filter list below.
#	This is the index number of the entry.
MAC Address	This is the MAC addresses of the wireless devices that are allowed or denied access to the WX3401-B0.
Modify	Click the Edit icon and type the MAC address of the peer device in a valid MAC address format (six hexadecimal character pairs, for example 12:34:56:78:9a:bc). Click the Delete icon to delete the entry.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

6.4.1 Add/Edit MAC Addresses

Click **Add new MAC address** in the **Network Setting > Wireless > MAC Authentication** screen to add a new MAC address. You can also click the Edit icon next to a MAC authentication rule to edit the rule.

Enter the MAC addresses of the wireless devices that are allowed or denied access to the WX3401-B0 in these address fields. Enter the MAC addresses in a valid MAC address format, that is, six hexadecimal character pairs, for example, 12:34:56:78:9a:bc.

Figure 42 Network Setting> Wireless > MAC Authentication > Add/Edit

The screenshot shows a dialog box titled "Add MAC address to list". It contains a text input field labeled "MAC Address" with a placeholder showing six hexadecimal pairs separated by colons. Below the input field are "Cancel" and "OK" buttons.

6.5 WPS Settings

WiFi Protected Setup (WPS) allows you to quickly set up a wireless network with strong security, without having to configure security settings manually. To set up a WPS connection between two devices, both devices must support WPS. It is recommended to use the Push Button Configuration (**PBC**) method if your wireless client supports it. See [Section 6.11.8.3 on page 109](#) for more information about WPS.

Note: The WX3401-B0 applies the security settings of the main SSID (**SSID1**) profile (see [Section 6.2 on page 83](#)).

Note: The WPS switch is grayed out when WiFi is disabled.

Click **Network Setting > Wireless > WPS**. The following screen displays. Click this switch and makes it turn blue. Click **Apply** to activate the WPS function. Then you can configure the WPS settings in this screen.

Figure 43 Network Setting > Wireless > WPS

Wireless

[General](#) | [Guest/More AP](#) | [MAC Authentication](#) | **[WPS](#)** | [WMM](#) | [Others](#) | [Channel Status](#) | [Operating Modes](#) | [AP List](#)

WiFi Protected Setup (WPS) allows you to quickly set up a wireless network with strong security, without having to configure security settings manually. To set up a WPS connection between two devices, both devices must support WPS. It is recommended to use the Push Button Configuration (PBC) method if your wireless client supports it.

General

WPS

Add a new device with WPS Method

Method 1 PBC

Step 1. Click WPS button WPS

Step 2. Press the WPS button on your new wireless client device within 120 seconds

Method 2 PIN

Step 1. Enter the PIN of your new wireless client device and then click Register

Register

Step 2. Press the WPS button on your new wireless client device within 120 seconds

Method 3

Enter AP's PIN Number in wireless Client

Current state Configured

1. Please release configuration if you want to configure the wireless settings

Release Configuration

2. Enter current PIN number on your wireless client

Generate New PIN

Note

(1) If WPS is Enabled, UPnP will automatically be turned on.
(2) The Zyxel Device applies the security settings of the main SSID (SSID1) profile.
(3) The WPS switch is grayed out when wireless LAN is disabled.

Cancel
Apply

The following table describes the labels in this screen.

Table 18 Network Setting > Wireless > WPS

LABEL	DESCRIPTION
General	
WPS	Click this switch to activate or deactivate WPS on this WX3401-B0. When the switch turns blue  , the function is enabled. Otherwise, it is not.
Add a new device with WPS Method	
Method 1	Use this section to set up a WPS wireless network using Push Button Configuration (PBC). Click this switch to make it turn blue. Click Apply to activate WPS method 1 on the WX3401-B0.
WPS	Click this button to add another WPS-enabled wireless device (within wireless range of the WX3401-B0) to your wireless network. This button may either be a physical button on the outside of device, or a menu button similar to the WPS button on this screen. Note: You must press the other wireless device's WPS button within two minutes of pressing this button.
Method 2	Use this section to set up a WPS wireless network by entering the PIN of the client into the WX3401-B0. Click this switch and make it turn blue. Click Apply to activate WPS method 2 on the WX3401-B0.

Table 18 Network Setting > Wireless > WPS (continued)

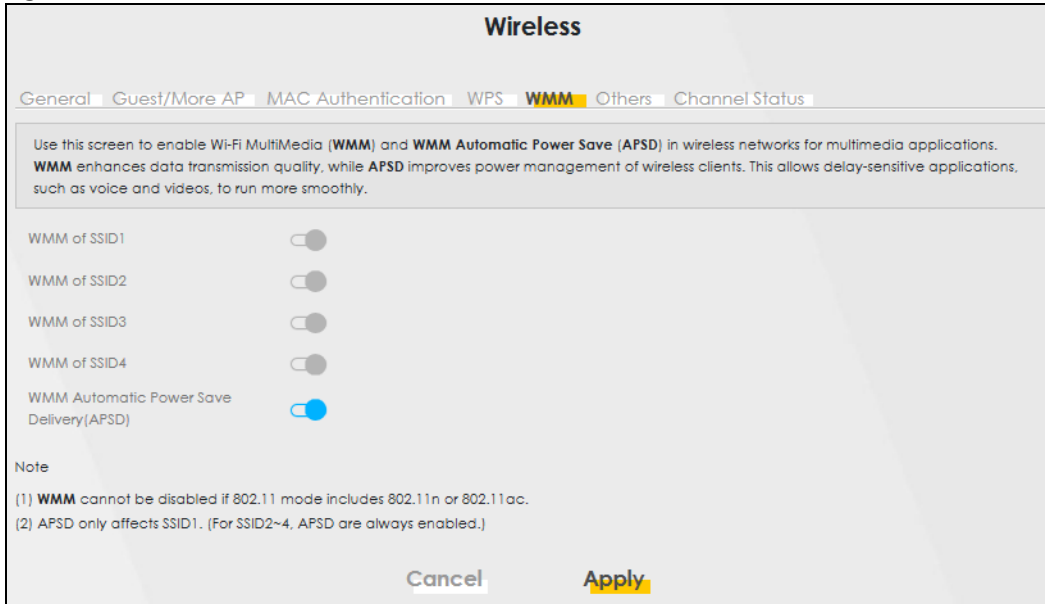

LABEL	DESCRIPTION
Register	<p>Enter the PIN of the device that you are setting up a WPS connection with and click Register to authenticate and add the wireless device to your wireless network.</p> <p>You can find the PIN either on the outside of the device, or by checking the device's settings.</p> <p>Note: You must also activate WPS on that device within two minutes to have it present its PIN to the WX3401-B0.</p>
Method 3	<p>Use this section to set up a WPS wireless network by entering the PIN of the WX3401-B0 into the client. Click this switch and make it turn blue. Click Apply to activate WPS method 3 on the WX3401-B0.</p>
Release Configuration	<p>The default WPS status is configured.</p> <p>Click this button to remove all configured wireless and wireless security settings for WPS connections on the WX3401-B0.</p>
Generate New PIN	<p>If this method has been enabled, the PIN (Personal Identification Number) of the WX3401-B0 is shown here. Enter this PIN in the configuration utility of the device you want to connect to using WPS.</p> <p>The PIN is not necessary when you use the WPS push-button method.</p> <p>Click the Generate New PIN button to have the WX3401-B0 create a new PIN.</p>
Cancel	<p>Click Cancel to restore the default or previously saved settings.</p>
Apply	<p>Click Apply to save your changes.</p>

6.6 WMM Settings

Use this screen to enable WiFi MultiMedia (**WMM**) and **WMM Automatic Power Save (APSD)** in wireless networks for multimedia applications. **WMM** enhances data transmission quality, while **APSD** improves power management of wireless clients. This allows delay-sensitive applications, such as voice and videos, to run more smoothly.

Click **Network Setting > Wireless > WMM** to display the following screen.

Figure 44 Network Setting > Wireless > WMM

Note: **WMM** cannot be disabled if 802.11 mode includes 802.11n or 802.11ac.

The following table describes the labels in this screen.

Table 19 Network Setting > Wireless > WMM

LABEL	DESCRIPTION
WMM of SSID1~4	Select On to have the WX3401-B0 automatically give the wireless network (SSIDx) a priority level according to the ToS value in the IP header of packets it sends. WMM QoS (WiFi MultiMedia Quality of Service) gives high priority to voice and video, which makes them run more smoothly. If the 802.11 Mode in Network Setting > Wireless > Others is set to include 802.11n or 802.11ac, WMM cannot be disabled.
WMM Automatic Power Save Delivery (APSD)	Select this option to extend the battery life of your mobile devices (especially useful for small devices that are running multimedia applications). The WX3401-B0 goes to sleep mode to save power when it is not transmitting data. The AP buffers the packets sent to the WX3401-B0 until the WX3401-B0 "wakes up". The WX3401-B0 wakes up periodically to check for incoming data. Note: This works only if the wireless device to which the WX3401-B0 is connected also supports this feature. APSD only affects SSID1. For SSID2~4, APSD is always enabled.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

6.7 Others Settings

Use this screen to configure advanced wireless settings, such as additional security settings, power saving, and data transmission settings. Click **Network Setting > Wireless > Others**. The screen appears as shown.

See [Section 6.11.2 on page 103](#) for detailed definitions of the terms listed in this screen.

Output Power 100%

Beacon Interval 100 ms

DTIM Interval 1 ms

802.11 Mode 802.11b/g/n/ax Mixed

Protected Management Frames Capable

Cancel Apply

The following table describes the labels in this screen.

Table 20 Network Setting > Wireless > Others

LABEL	DESCRIPTION
Output Power	Set the output power of the WX3401-B0. If there is a high density of APs in an area, decrease the output power to reduce interference with other APs. Select one of the following: 20%, 40%, 60%, 80% or 100% .
Beacon Interval	When a wirelessly networked device sends a beacon, it includes with it a beacon interval. This specifies the time period before the device sends the beacon again. The interval tells receiving devices on the network how long they can wait in low power mode before waking up to handle the beacon. This value can be set from 50 ms to 1000 ms. A high value helps save current consumption of the access point.
DTIM Interval	Delivery Traffic Indication Message (DTIM) is the time period after which broadcast and multicast packets are transmitted to mobile clients in the Power Saving mode. A high DTIM value can cause clients to lose connectivity with the network. This value can be set from 1 to 255.

Table 20 Network Setting > Wireless > Others (continued)

LABEL	DESCRIPTION
802.11 Mode	<p>For 2.4 GHz frequency WiFi devices:</p> <ul style="list-style-type: none"> • Select 802.11b Only to allow only IEEE 802.11b compliant WiFi devices to associate with the WX3401-B0. • Select 802.11g Only to allow only IEEE 802.11g compliant WiFi devices to associate with the WX3401-B0. • Select 802.11n Only to allow only IEEE 802.11n compliant WiFi devices to associate with the WX3401-B0. • Select 802.11b/g Mixed to allow either IEEE 802.11b or IEEE 802.11g compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced. • Select 802.11b/g/n Mixed to allow IEEE 802.11b, IEEE 802.11g or IEEE 802.11n compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced. • Select 802.11b/g/n/ax Mixed to allow IEEE 802.11b, IEEE 802.11g, IEEE 802.11n or IEEE 802.11ax compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced. <p>For 5 GHz frequency WiFi devices:</p> <ul style="list-style-type: none"> • Select 802.11a Only to allow only IEEE 802.11a compliant WiFi devices to associate with the WX3401-B0. • Select 802.11n Only to allow only IEEE 802.11n compliant WiFi devices to associate with the WX3401-B0. • Select 802.11ac Only to allow only IEEE 802.11ac compliant WiFi devices to associate with the WX3401-B0. • Select 802.11a/n Mixed to allow either IEEE 802.11a or IEEE 802.11n compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced. • Select 802.11n/ac Mixed to allow either IEEE 802.11n or IEEE 802.11ac compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced. • Select 802.11a/n/ac Mixed to allow IEEE 802.11a, IEEE 802.11n or IEEE 802.11ac compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced. • Select 802.11a/n/ac/ax Mixed to allow IEEE 802.11a, IEEE 802.11n, IEEE 802.11ac or IEEE 802.11ax compliant WiFi devices to associate with the WX3401-B0. The transmission rate of your WX3401-B0 might be reduced.
Protected Management Frames	<p>This option is only available when using WPA2-PSK as the Security Mode and AES Encryption in Network Setting > Wireless > General. Management frame protection (MFP) helps prevent wireless DoS attacks.</p> <p>Select Disable if you do not want to use MFP.</p> <p>Select Capable to encrypt management frames of wireless clients that support MFP. Clients that do not support MFP will still be allowed to join the wireless network, but remain unprotected.</p> <p>Select Required to allow only clients that support MFP to join the wireless network.</p>
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

6.8 Channel Status Settings

Use the **Channel Status** screen to scan WiFi channel noises and view the results. Click **Network Setting > Wireless > Channel Status**. The screen appears as shown. Click **Scan** to scan the WiFi channels. You can view the results in the **Channel Scan Result** section.

Note: If the current channel is a DFS channel, the warning 'Channel scan process is denied because current channel is a DFS channel (Channel: 52~140). If you want to run channel scan, please select a non-DFS channel and try again.' appears.

Figure 46 Network Setting > Wireless > Channel Status

6.9 Operating Modes Settings

Use this screen to manually enter the SSID and security settings of the AP to which you want the WX3401-B0 to connect. This screen allows you to set a profile so that the WX3401-B0 will automatically try to connect to the AP specified in the profile each time the WX3401-B0 in Repeater mode is turned on.

Click **Network Setting > Wireless > Operating Modes**. The screen appears as shown.

Note: The **Operating Mode** is available when you select 5GHz wireless connection. (See [Section 6.2 on page 83](#)).

Figure 47 Network Setting > Wireless > Operating Modes

The following table describes the labels in this screen.

Table 21 Network Setting > Wireless > Operating Modes

LABEL	DESCRIPTION
Operating Modes	
Modes	This displays the operating mode of the WX3401-B0. <ul style="list-style-type: none"> If the WX3401-B0 is connected to the AP using a cable, the WX3401-B0 will be in the AP mode. If the WX3401-B0 is connected to the AP wirelessly, the WX3401-B0 will be in the repeater mode.
Wireless Setup	
Wireless Network Name	Enter the name of the wireless network (SSID) to which the WX3401-B0 is connecting.
Security Mode	Select the security mode the AP uses from the drop down list box.
Password	Enter the password of the wireless network to which the WX3401-B0 is connecting.
WPS Setup	

Table 21 Network Setting > Wireless > Operating Modes

LABEL	DESCRIPTION
WPS	Select this to activate or deactivate the WPS method.
Click WPS button	Click this to connect the WX3401-B0 to the AP using the WPS method.
Apply	Click Apply to save your changes.
Cancel	Click Cancel to begin configuring this screen afresh.

6.10 AP List Screen

You can use this screen to select an AP and enter its WiFi password to connect to the wireless network.

Click **Network Setting > Wireless > AP List**. The screen appears as shown.

Note: The **AP List** is available when you select 5GHz wireless connection. (See [Section 6.2 on page 83](#)).

Figure 48 Network Setting > Wireless > AP List

The following table describes the labels in this screen.

Table 22 Network Setting > Wireless > AP List

LABEL	DESCRIPTION
Connection Status	This shows whether the WX3401-B0 is already connected, attempting to connect, or not connected to a wireless network.
Current SSID	This shows the name of the AP to which your WX3401-B0 is currently connected.
#	This is the index number of the AP the WX3401-B0 can detect.
Active	This field indicates whether the AP is active or not.

Table 22 Network Setting > Wireless > AP List

LABEL	DESCRIPTION
SSID	This shows the network name of the AP the WX3401-B0 can detect.
MAC Address	This shows the MAC address of the AP.
Channel	This shows the channel the AP uses.
RSSI (dbm)	This shows the strength of the AP's radio signal measured in dbm.
Security	This shows Yes if the WX3401-B0 needs a security password to connect to the AP. It shows No if the WX3401-B0 does not need a password to connect.
AP	This shows the name of the AP you click and try to connect.
Password	The Password input box displays when the Security column is Yes for the selected SSID. Enter the password for this wireless network in the Password input box.
Connect	The Connect button appears at the end of the table after you click on a SSID. Click this button to connect to the selected AP.
Rescan	Click Rescan to refresh the list of APs available.

6.11 Technical Reference

This section discusses WiFi in depth. For more information, see [Appendix B on page 158](#).

6.11.1 Wireless Network Overview

Wireless networks consist of wireless clients, access points and bridges.

- A wireless client is a radio connected to a user's computer.
- An access point is a radio with a wired connection to a network, which can connect with numerous wireless clients and let them access the network.
- A bridge is a radio that relays communications between access points and wireless clients, extending a network's range.

Traditionally, a wireless network operates in one of two ways.

- An "infrastructure" type of network has one or more access points and one or more wireless clients. The wireless clients connect to the access points.
- An "ad-hoc" type of network is one in which there is no access point. Wireless clients connect to one another in order to exchange information.

The following figure provides an example of a wireless network.

Figure 49 Example of a Wireless Network

The wireless network is the part in the blue circle. In this wireless network, devices **A** and **B** use the access point (**AP**) to interact with the other devices (such as the printer) or with the Internet. Your WX3401-B0 is the AP.

Every wireless network must follow these basic guidelines.

- Every device in the same wireless network must use the same SSID.
The SSID is the name of the wireless network. It stands for Service Set Identifier.
- If two wireless networks overlap, they should use a different channel.
Like radio stations or television channels, each wireless network uses a specific channel, or frequency, to send and receive information.
- Every device in the same wireless network must use security compatible with the AP.
Security stops unauthorized devices from using the wireless network. It can also protect the information that is sent in the wireless network.

Radio Channels

In the radio spectrum, there are certain frequency bands allocated for unlicensed, civilian use. For the purposes of wireless networking, these bands are divided into numerous channels. This allows a variety of networks to exist in the same place without interfering with one another. When you create a network, you must select a channel to use.

Since the available unlicensed spectrum varies from one country to another, the number of available channels also varies.

6.11.2 Additional Wireless Terms

The following table describes some wireless network terms and acronyms used in the WX3401-B0's Web Configurator.

Table 23 Additional Wireless Terms

TERM	DESCRIPTION
RTS/CTS Threshold	<p>In a wireless network which covers a large area, wireless devices are sometimes not aware of each other's presence. This may cause them to send information to the AP at the same time and result in information colliding and not getting through.</p> <p>By setting this value lower than the default value, the wireless devices must sometimes get permission to send information to the WX3401-B0. The lower the value, the more often the devices must get permission.</p> <p>If this value is greater than the fragmentation threshold value (see below), then wireless devices never have to get permission to send information to the WX3401-B0.</p>
Preamble	A preamble affects the timing in your wireless network. There are two preamble modes: long and short. If a device uses a different preamble mode than the WX3401-B0 does, it cannot communicate with the WX3401-B0.
Authentication	The process of verifying whether a wireless device is allowed to use the wireless network.
Fragmentation Threshold	A small fragmentation threshold is recommended for busy networks, while a larger threshold provides faster performance if the network is not very busy.

6.11.3 Wireless Security Overview

By their nature, radio communications are simple to intercept. For wireless data networks, this means that anyone within range of a wireless network without security can not only read the data passing over the airwaves, but also join the network. Once an unauthorized person has access to the network, he or she can steal information or introduce malware (malicious software) intended to compromise the network. For these reasons, a variety of security systems have been developed to ensure that only authorized people can use a wireless data network, or understand the data carried on it.

These security standards do two things. First, they authenticate. This means that only people presenting the right credentials (often a username and password, or a "key" phrase) can access the network. Second, they encrypt. This means that the information sent over the air is encoded. Only people with the code key can understand the information, and only people who have been authenticated are given the code key.

These security standards vary in effectiveness. Some can be broken, such as the old Wired Equivalent Protocol (WEP). Using WEP is better than using no security at all, but it will not keep a determined attacker out. Other security standards are secure in themselves but can be broken if a user does not use them properly. For example, the WPA-PSK security standard is very secure if you use a long key which is difficult for an attacker's software to guess - for example, a twenty-letter long string of apparently random numbers and letters - but it is not very secure if you use a short key which is very easy to guess - for example, a three-letter word from the dictionary.

Because of the damage that can be done by a malicious attacker, it's not just people who have sensitive information on their network who should use security. Everybody who uses any wireless network should ensure that effective security is in place.

A good way to come up with effective security keys, passwords and so on is to use obscure information that you personally will easily remember, and to enter it in a way that appears random and does not include real words. For example, if your mother owns a 1970 Dodge Challenger and her favorite movie is

Vanishing Point (which you know was made in 1971) you could use "70dodchal71vanpoi" as your security key.

The following sections introduce different types of wireless security you can set up in the wireless network.

6.11.3.1 SSID

Normally, the WX3401-B0 acts like a beacon and regularly broadcasts the SSID in the area. You can hide the SSID instead, in which case the WX3401-B0 does not broadcast the SSID. In addition, you should change the default SSID to something that is difficult to guess.

This type of security is fairly weak, however, because there are ways for unauthorized wireless devices to get the SSID. In addition, unauthorized wireless devices can still see the information that is sent in the wireless network.

6.11.3.2 MAC Address Filter

Every device that can use a wireless network has a unique identification number, called a MAC address.¹ A MAC address is usually written using twelve hexadecimal characters²; for example, 00A0C5000002 or 00:A0:C5:00:00:02. To get the MAC address for each device in the wireless network, see the device's User's Guide or other documentation.

You can use the MAC address filter to tell the WX3401-B0 which devices are allowed or not allowed to use the wireless network. If a device is allowed to use the wireless network, it still has to have the correct information (SSID, channel, and security). If a device is not allowed to use the wireless network, it does not matter if it has the correct information.

This type of security does not protect the information that is sent in the wireless network. Furthermore, there are ways for unauthorized wireless devices to get the MAC address of an authorized device. Then, they can use that MAC address to use the wireless network.

6.11.3.3 User Authentication

Authentication is the process of verifying whether a wireless device is allowed to use the wireless network. You can make every user log in to the wireless network before using it. However, every device in the wireless network has to support IEEE 802.1x to do this.

For wireless networks, you can store the user names and passwords for each user in a RADIUS server. This is a server used in businesses more than in homes. If you do not have a RADIUS server, you cannot set up user names and passwords for your users.

Unauthorized wireless devices can still see the information that is sent in the wireless network, even if they cannot use the wireless network. Furthermore, there are ways for unauthorized wireless users to get a valid user name and password. Then, they can use that user name and password to use the wireless network.

-
1. Some wireless devices, such as scanners, can detect wireless networks but cannot use wireless networks. These kinds of wireless devices might not have MAC addresses.
 2. Hexadecimal characters are 0, 1, 2, 3, 4, 5, 6, 7, 8, 9, A, B, C, D, E, and F.

6.11.3.4 Encryption

Wireless networks can use encryption to protect the information that is sent in the wireless network. Encryption is like a secret code. If you do not know the secret code, you cannot understand the message.

Many types of encryption use a key to protect the information in the wireless network. The longer the key, the stronger the encryption. Every device in the wireless network must have the same key.

6.11.4 Signal Problems

Because wireless networks are radio networks, their signals are subject to limitations of distance, interference and absorption.

Problems with distance occur when the two radios are too far apart. Problems with interference occur when other radio waves interrupt the data signal. Interference may come from other radio transmissions, such as military or air traffic control communications, or from machines that are coincidental emitters such as electric motors or microwaves. Problems with absorption occur when physical objects (such as thick walls) are between the two radios, muffling the signal.

6.11.5 BSS

A Basic Service Set (BSS) exists when all communications between wireless stations or between a wireless station and a wired network client go through one access point (AP).

Intra-BSS traffic is traffic between wireless stations in the BSS. When Intra-BSS traffic blocking is disabled, wireless station A and B can access the wired network and communicate with each other. When Intra-BSS traffic blocking is enabled, wireless station A and B can still access the wired network but cannot communicate with each other.

Figure 50 Basic Service Set

6.11.6 MBSSID

Traditionally, you need to use different APs to configure different Basic Service Sets (BSSs). As well as the cost of buying extra APs, there is also the possibility of channel interference. The WX3401-B0's MBSSID (Multiple Basic Service Set Identifier) function allows you to use one access point to provide several BSSs simultaneously. You can then assign varying QoS priorities and/or security modes to different SSIDs.

Wireless devices can use different BSSIDs to associate with the same AP.

6.11.6.1 Notes on Multiple BSSs

- A maximum of eight BSSs are allowed on one AP simultaneously.
- You must use different keys for different BSSs. If two wireless devices have different BSSIDs (they are in different BSSs), but have the same keys, they may hear each other's communications (but not communicate with each other).
- MBSSID should not replace but rather be used in conjunction with 802.1x security.

6.11.7 Preamble Type

Preamble is used to signal that data is coming to the receiver. Short and long refer to the length of the synchronization field in a packet.

Short preamble increases performance as less time sending preamble means more time for sending data. All IEEE 802.11 compliant wireless adapters support long preamble, but not all support short preamble.

Use long preamble if you are unsure what preamble mode other wireless devices on the network support, and to provide more reliable communications in busy wireless networks.

Use short preamble if you are sure all wireless devices on the network support it, and to provide more efficient communications.

Use the dynamic setting to automatically use short preamble when all wireless devices on the network support it, otherwise the WX3401-B0 uses long preamble.

Note: The wireless devices MUST use the same preamble mode in order to communicate.

6.11.8 WiFi Protected Setup (WPS)

Your WX3401-B0 supports WiFi Protected Setup (WPS), which is an easy way to set up a secure wireless network. WPS is an industry standard specification, defined by the WiFi Alliance.

WPS allows you to quickly set up a wireless network with strong security, without having to configure security settings manually. Each WPS connection works between two devices. Both devices must support WPS (check each device's documentation to make sure).

Depending on the devices you have, you can either press a button (on the device itself, or in its configuration utility) or enter a PIN (a unique Personal Identification Number that allows one device to authenticate the other) in each of the two devices. When WPS is activated on a device, it has two minutes to find another device that also has WPS activated. Then, the two devices connect and set up a secure network by themselves.

6.11.8.1 Push Button Configuration

WPS Push Button Configuration (PBC) is initiated by pressing a button on each WPS-enabled device, and allowing them to connect automatically. You do not need to enter any information.

Not every WPS-enabled device has a physical WPS button. Some may have a WPS PBC button in their configuration utilities instead of or in addition to the physical button.

Take the following steps to set up WPS using the button.

- 1 Ensure that the two devices you want to set up are within wireless range of one another.
- 2 Look for a WPS button on each device. If the device does not have one, log into its configuration utility and locate the button (see the device's User's Guide for how to do this - for the WX3401-B0, see [Section 6.6 on page 94](#)).
- 3 Press the button on one of the devices (it does not matter which). For the WX3401-B0 you must press the WPS button for more than five seconds.
- 4 Within two minutes, press the button on the other device. The registrar sends the network name (SSID) and security key through a secure connection to the enrollee.

If you need to make sure that WPS worked, check the list of associated wireless clients in the AP's configuration utility. If you see the wireless client in the list, WPS was successful.

6.11.8.2 PIN Configuration

Each WPS-enabled device has its own PIN (Personal Identification Number). This may either be static (it cannot be changed) or dynamic (in some devices you can generate a new PIN by clicking on a button in the configuration interface).

Use the PIN method instead of the push-button configuration (PBC) method if you want to ensure that the connection is established between the devices you specify, not just the first two devices to activate WPS in range of each other. However, you need to log into the configuration interfaces of both devices to use the PIN method.

When you use the PIN method, you must enter the PIN from one device (usually the wireless client) into the second device (usually the Access Point or wireless router). Then, when WPS is activated on the first device, it presents its PIN to the second device. If the PIN matches, one device sends the network and security information to the other, allowing it to join the network.

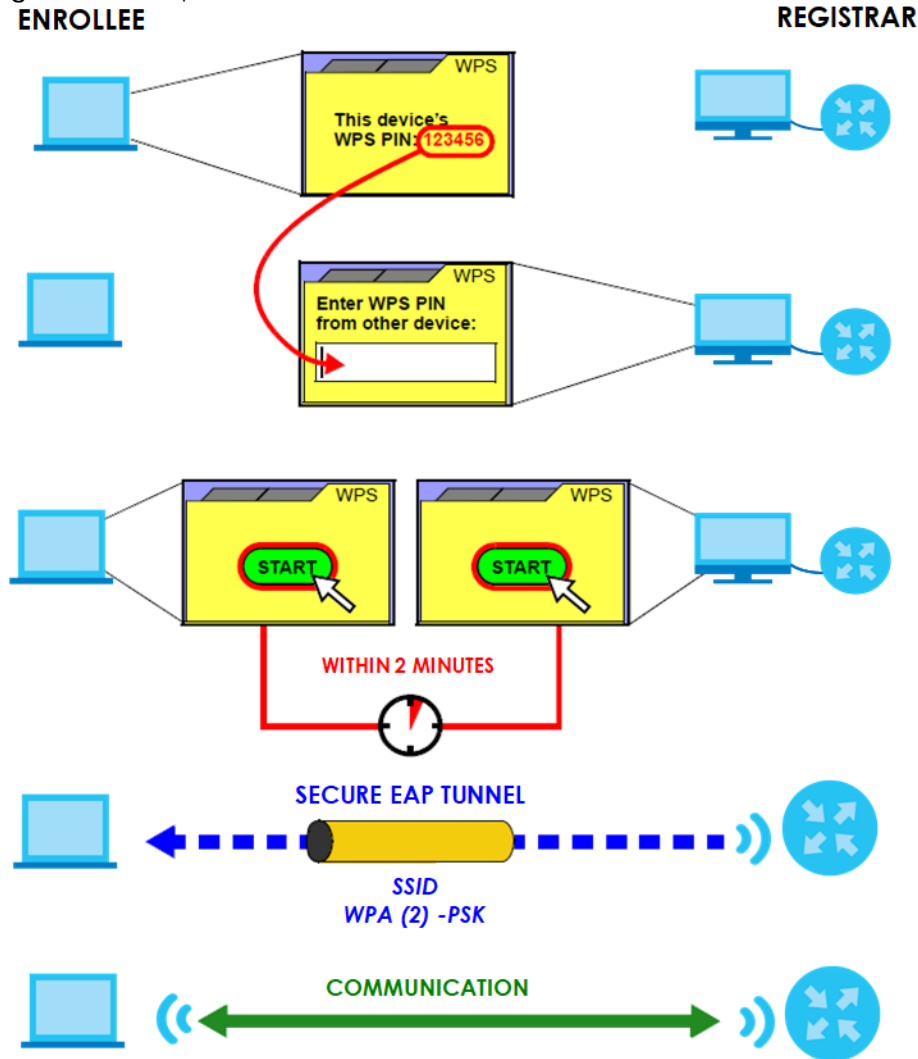

Take the following steps to set up a WPS connection between an access point or wireless router (referred to here as the AP) and a client device using the PIN method.

- 1 Ensure WPS is enabled on both devices.
- 2 Access the WPS section of the AP's configuration interface. See the device's User's Guide for how to do this.
- 3 Look for the client's WPS PIN; it will be displayed either on the device, or in the WPS section of the client's configuration interface (see the device's User's Guide for how to find the WPS PIN - for the WX3401-B0, see [Section 6.5 on page 92](#)).
- 4 Enter the client's PIN in the AP's configuration interface.
- 5 If the client device's configuration interface has an area for entering another device's PIN, you can either enter the client's PIN in the AP, or enter the AP's PIN in the client - it does not matter which.
- 6 Start WPS on both devices within two minutes.
- 7 Use the configuration utility to activate WPS, not the push-button on the device itself.
- 8 On a computer connected to the wireless client, try to connect to the Internet. If you can connect, WPS was successful.

If you cannot connect, check the list of associated wireless clients in the AP's configuration utility. If you see the wireless client in the list, WPS was successful.

The following figure shows a WPS-enabled wireless client (installed in a notebook computer) connecting to the WPS-enabled AP via the PIN method.

Figure 51 Example WPS Process: PIN Method

6.11.8.3 How WPS Works

When two WPS-enabled devices connect, each device must assume a specific role. One device acts as the registrar (the device that supplies network and security settings) and the other device acts as the enrollee (the device that receives network and security settings). The registrar creates a secure EAP (Extensible Authentication Protocol) tunnel and sends the network name (SSID) and the WPA-PSK or WPA2-PSK pre-shared key to the enrollee. Whether WPA-PSK or WPA2-PSK is used depends on the standards supported by the devices. If the registrar is already part of a network, it sends the existing information. If not, it generates the SSID and WPA2-PSK randomly.

The following figure shows a WPS-enabled client (installed in a notebook computer) connecting to a WPS-enabled access point.

Figure 52 How WPS Works

The roles of registrar and enrollee last only as long as the WPS setup process is active (two minutes). The next time you use WPS, a different device can be the registrar if necessary.

The WPS connection process is like a handshake; only two devices participate in each WPS transaction. If you want to add more devices you should repeat the process with one of the existing networked devices and the new device.

Note that the access point (AP) is not always the registrar, and the wireless client is not always the enrollee. All WPS-certified APs can be a registrar, and so can some WPS-enabled wireless clients.

By default, a WPS device is “unconfigured”. This means that it is not part of an existing network and can act as either enrollee or registrar (if it supports both functions). If the registrar is unconfigured, the security settings it transmits to the enrollee are randomly-generated. Once a WPS-enabled device has connected to another device using WPS, it becomes “configured”. A configured wireless client can still act as enrollee or registrar in subsequent WPS connections, but a configured access point can no longer act as enrollee. It will be the registrar in all subsequent WPS connections in which it is involved. If you want a configured AP to act as an enrollee, you must reset it to its factory defaults.

6.11.8.4 Example WPS Network Setup

This section shows how security settings are distributed in an example WPS setup.

The following figure shows an example network. In step 1, both **AP1** and **Client 1** are unconfigured. When WPS is activated on both, they perform the handshake. In this example, **AP1** is the registrar, and **Client 1** is the enrollee. The registrar randomly generates the security information to set up the network, since it is unconfigured and has no existing information.

Figure 53 WPS: Example Network Step 1

In step 2, you add another wireless client to the network. You know that **Client 1** supports registrar mode, but it is better to use **AP1** for the WPS handshake with the new client since you must connect to the access point anyway in order to use the network. In this case, **AP1** must be the registrar, since it is configured (it already has security information for the network). **AP1** supplies the existing security information to **Client 2**.

Figure 54 WPS: Example Network Step 2

In step 3, you add another access point (**AP2**) to your network. **AP2** is out of range of **AP1**, so you cannot use **AP1** for the WPS handshake with the new access point. However, you know that **Client 2** supports the registrar function, so you use it to perform the WPS handshake instead.

Figure 55 WPS: Example Network Step 3

6.11.8.5 Limitations of WPS

WPS has some limitations of which you should be aware.

- WPS works in Infrastructure networks only (where an AP and a wireless client communicate). It does not work in Ad-Hoc networks (where there is no AP).
- When you use WPS, it works between two devices only. You cannot enroll multiple devices simultaneously, you must enroll one after the other.

For instance, if you have two enrollees and one registrar you must set up the first enrollee (by pressing the WPS button on the registrar and the first enrollee, for example), then check that it successfully enrolled, then set up the second device in the same way.

- WPS works only with other WPS-enabled devices. However, you can still add non-WPS devices to a network you already set up using WPS.

WPS works by automatically issuing a randomly-generated WPA-PSK or WPA2-PSK pre-shared key from the registrar device to the enrollee devices. Whether the network uses WPA-PSK or WPA2-PSK depends on the device. You can check the configuration interface of the registrar device to discover the key the network is using (if the device supports this feature). Then, you can enter the key into the non-WPS device and join the network as normal (the non-WPS device must also support WPA-PSK or WPA2-PSK).

- When you use the PBC method, there is a short period (from the moment you press the button on one device to the moment you press the button on the other device) when any WPS-enabled device could join the network. This is because the registrar has no way of identifying the “correct” enrollee, and cannot differentiate between your enrollee and a rogue device. This is a possible way for a hacker to gain access to a network.

You can easily check to see if this has happened. WPS works between only two devices simultaneously, so if another device has enrolled your device will be unable to enroll, and will not have access to the network. If this happens, open the access point's configuration interface and look at the list of associated clients (usually displayed by MAC address). It does not matter if the access

point is the WPS registrar, the enrollee, or was not involved in the WPS handshake; a rogue device must still associate with the access point to gain access to the network. Check the MAC addresses of your wireless clients (usually printed on a label on the bottom of the device). If there is an unknown MAC address you can remove it or reset the AP.

CHAPTER 7

Home Networking

7.1 Home Networking Overview

A Local Area Network (LAN) is a shared communication system to which many networking devices are connected. It is usually located in one immediate area such as a building or floor of a building.

Use the LAN screens to help you configure a LAN DHCP server and manage IP addresses.

Figure 56 Home Networking Example

7.1.1 What You Can Do in this Chapter

- Use the **Home Networking** screen to set the LAN IP address, subnet mask, and DHCP settings of your WX3401-B0 ([Section 7.2 on page 115](#)).

7.1.2 What You Need To Know

7.1.2.1 About LAN

IP Address

IP addresses identify individual devices on a network. Every networking device (including computers, servers, routers, printers, and so on) needs an IP address to communicate across the network. These networking devices are also known as hosts.

Subnet Mask

Subnet masks determine the maximum number of possible hosts on a network. You can also use subnet masks to divide one network into multiple sub-networks.

7.1.3 Before You Begin

Find out the MAC addresses of your network devices if you intend to add them to the DHCP Client List screen.

7.2 Home Networking Screen

Use this screen to set the IP address and subnet mask of your WX3401-B0. Configure DHCP settings to have a DHCP server assign IP addresses to devices. Click **Network Setting > Home Networking** to open the **Home Networking** screen.

Follow these steps to configure your LAN settings.

- 1 Enter an IP address into the **IP Address** field. The IP address must be in dotted decimal notation. This will become the IP address of your WX3401-B0.
- 2 Enter the IP subnet mask into the **IP Subnet Mask** field. Unless instructed otherwise it is best to leave this alone, the configurator will automatically compute a subnet mask based upon the IP address you entered.
- 3 Click **Apply** to save your settings.

Figure 57 Network Setting > Home Networking > Home Networking

The following table describes the fields in this screen.

Table 24 Network Setting > Home Networking > LAN Setup

LABEL	DESCRIPTION
LAN IP Setup	Select DHCP to deploy the WX3401-B0 as a DHCP client in the network. When you enable this, the WX3401-B0 gets its IP address from the network's DHCP server (for example, your ISP or router). Users connected to the WX3401-B0 can now access the network (i.e., the Internet if the IP address is given by the ISP or a router with Internet access). When you select this, you cannot enter an IP address for your WX3401-B0 in the field below. Select Static IP if you want to specify the IP address of your WX3401-B0. Or if your ISP or network administrator gave you a static IP address to access the network or the Internet.
IP Address	Enter the LAN IPv4 IP address you want to assign to your WX3401-B0 in dotted decimal notation, for example, 192.168.1.2 (factory default).

Table 24 Network Setting > Home Networking > LAN Setup (continued)

LABEL	DESCRIPTION
Subnet Mask	Type the subnet mask of your network in dotted decimal notation, for example 255.255.255.0 (factory default). Your WX3401-B0 automatically computes the subnet mask based on the IP address you enter, so do not change this field unless you are instructed to do so.
Gateway IP Address	Enter a gateway IPv4 address (if your ISP or network administrator gave you one) in this field.
IPv6 Setup	Select how you want to obtain an IPv6 address: Select Stateful to obtain an IPv6 address using IPv6 stateful autoconfiguration. Select Stateless to obtain an IPv6 address using IPv6 stateless autoconfiguration. Select Static to configure a fixed IPv6 address for the WX3401-B0.
WAN IPv6 Address	Enter an IPv6 IP address that your ISP gave to you for the WAN interface.
IPv6 Gateway	Enter the IP address of the next-hop gateway. The gateway is a router or switch on the same segment as your WX3401-B0's interfaces. The gateway helps forward packets to their destinations.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

CHAPTER 8

Log

8.1 Log Overview

These screens allow you to determine the categories of events that the WX3401-B0 logs and then display these logs or have the WX3401-B0 send them to an administrator (through e-mail) or to a syslog server.

8.1.1 What You Can Do in this Chapter

- Use the **System Log** screen to see the system logs ([Section 8.2 on page 118](#)).

8.1.2 What You Need To Know

The following terms and concepts may help as you read this chapter.

Alerts and Logs

An alert is a type of log that warrants more serious attention. They include system errors, attacks (access control) and attempted access to blocked web sites. Some categories such as **System Errors** consist of both logs and alerts. You may differentiate them by their color in the **View Log** screen. Alerts display in red and logs display in black.

Syslog Overview

The syslog protocol allows devices to send event notification messages across an IP network to syslog servers that collect the event messages. A syslog-enabled device can generate a syslog message and send it to a syslog server.

Syslog is defined in RFC 3164. The RFC defines the packet format, content and system log related information of syslog messages. Each syslog message has a facility and severity level. The syslog facility identifies a file in the syslog server. Refer to the documentation of your syslog program for details. The following table describes the syslog severity levels.

Table 25 Syslog Severity Levels

CODE	SEVERITY
0	Emergency: The system is unusable.
1	Alert: Action must be taken immediately.
2	Critical: The system condition is critical.
3	Error: There is an error condition on the system.
4	Warning: There is a warning condition on the system.
5	Notice: There is a normal but significant condition on the system.
6	Informational: The syslog contains an informational message.
7	Debug: The message is intended for debug-level purposes.

8.2 System Log Settings

Use the **Log** screen to see the system logs. You can filter the entries by selecting a severity level and/or category. Click **System Monitor > Log > System Log** to open the **System Log** screen.

Figure 58 System Monitor > Log > System Log

The screenshot shows the 'Log' screen with a title bar and a subtitle: 'Use the System Log screen to see the system logs. You can filter the entries by selecting a severity level and/or category.' Below the subtitle are two dropdown menus for 'Level' (set to 'All') and 'Category' (set to 'All'). To the right are three buttons: 'Clear Log', 'Refresh', and 'Export Log'. The main area contains a table with the following data:

#	Time	Facility	Level	Category	Messages
1	Jan 1 02:12:21	user	debug	dhcpc	udhcpc: Sending discover...
2	Jan 1 02:12:19	user	debug	dhcpc	udhcpc: Sending discover...
3	Jan 1 02:12:10	user	debug	dhcpc	udhcpc: Sending discover...
4	Jan 1 02:12:08	user	debug	dhcpc	udhcpc: Sending discover...
5	Jan 1 02:12:06	user	debug	dhcpc	udhcpc: Sending discover...
6	Jan 1 02:11:57	user	debug	dhcpc	udhcpc: Sending discover...
7	Jan 1 02:11:55	user	debug	dhcpc	udhcpc: Sending discover...
8	Jan 1 02:11:53	user	debug	dhcpc	udhcpc: Sending discover...
9	Jan 1 02:11:44	user	debug	dhcpc	udhcpc: Sending discover...
10	Jan 1 02:11:42	user	debug	dhcpc	udhcpc: Sending discover...
11	Jan 1 02:11:40	user	debug	dhcpc	udhcpc: Sending discover...
12	Jan 1 02:11:31	user	debug	dhcpc	udhcpc: Sending discover...
13	Jan 1 02:11:29	user	debug	dhcpc	udhcpc: Sending discover...
14	Jan 1 02:11:27	user	debug	dhcpc	udhcpc: Sending discover...
15	Jan 1 02:11:18	user	debug	dhcpc	udhcpc: Sending discover...
16	Jan 1 02:11:16	user	debug	dhcpc	udhcpc: Sending discover...
17	Jan 1 02:11:14	user	debug	dhcpc	udhcpc: Sending discover...
18	Jan 1 02:11:05	user	debug	dhcpc	udhcpc: Sending discover...
19	Jan 1 02:11:03	user	debug	dhcpc	udhcpc: Sending discover...
20	Jan 1 02:11:01	user	debug	dhcpc	udhcpc: Sending discover...
21	Jan 1 02:10:52	user	debug	dhcpc	udhcpc: Sending discover...
22	Jan 1 02:10:50	user	debug	dhcpc	udhcpc: Sending discover...
23	Jan 1 02:10:48	user	debug	dhcpc	udhcpc: Sending discover...
24	Jan 1 02:10:39	user	debug	dhcpc	udhcpc: Sending discover...
25	Jan 1 02:10:37	user	debug	dhcpc	udhcpc: Sending discover...

The following table describes the fields in this screen.

Table 26 System Monitor > Log > System Log

LABEL	DESCRIPTION
Level	Select a severity level from the drop-down list box. This filters search results according to the severity level you have selected. When you select a severity, the WX3401-B0 searches through all logs of that severity or higher.
Category	Select the type of logs to display.
Clear Log	Click this to delete all the logs.
Refresh	Click this to renew the log screen.
Export Log	Click this to save the current list of logs to your computer.
#	This field is a sequential value and is not associated with a specific entry.
Time	This field displays the time the log was recorded.

Table 26 System Monitor > Log > System Log (continued)

LABEL	DESCRIPTION
Facility	The log facility allows you to send logs to different files in the syslog server. Refer to the documentation of your syslog program for more details.
Level	This field displays the severity level of the log.
Category	This field displays the type of the log.
Messages	This field states the reason for the log.

CHAPTER 9

Multicast Status

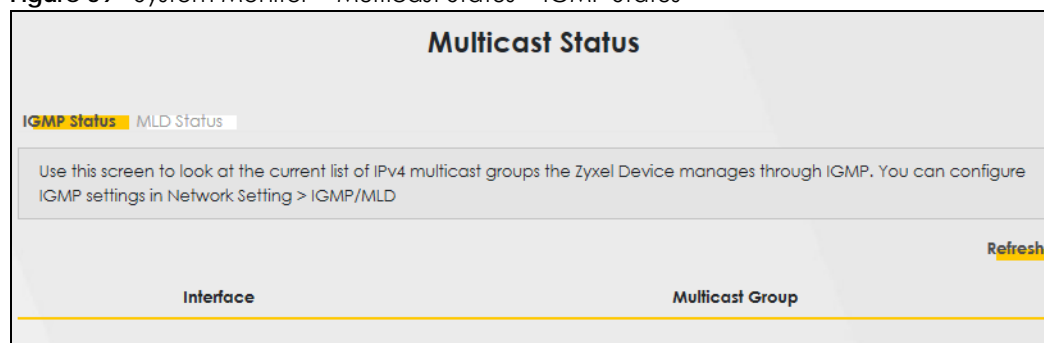

9.1 Multicast Status Overview

Use the **Multicast Status** screens to view IPv4 or IPv6 multicast group information.

9.2 IGMP Status

Use this screen to look at the current list of IPv4 multicast groups the WX3401-B0 manages through IGMP. Internet Group Multicast Protocol (IGMP) is a network-layer protocol used to establish membership in a Multicast group - it is not used to carry user data. You can configure IGMP settings in **Network Setting > IGMP Status**.

Figure 59 System Monitor > Multicast Status > IGMP Status

The following table describes the labels in this screen.

Table 27 System Monitor > Multicast Status > IGMP Status

LABEL	DESCRIPTION
Refresh	Click this button to update the information on this screen.
Interface	This field displays the name of the WX3401-B0's interface that belongs to an IGMP multicast group.
Multicast Group	This field displays the address of the IGMP multicast group to which the interface belongs.

9.3 MLD Status

Use this screen to look at the current list of IPv6 multicast groups the WX3401-B0 manages through MLD. Multicast Listener Discovery (MLD) allows an IPv6 switch or router to discover the presence of MLD hosts who wish to receive multicast packets and the IP addresses of multicast groups the hosts want to join on its network. MLDv1 is equivalent to IGMPv2 and MLDv2 is equivalent to IGMPv3. You can configure MLD

settings in **Network Setting > MLD Status**. To open this screen, click **System Monitor > Multicast Status > MLD Status**.

Figure 60 System Monitor > Multicast Status > MLD Status

The following table describes the labels in this screen.

Table 28 System Monitor > Multicast Status > MLD Status

LABEL	DESCRIPTION
Refresh	Click this button to update the status on this screen.
Interface	This field displays the name of the WX3401-B0's interface that belongs to an MLD multicast group.
Multicast Group	This field displays the address of the MLD multicast group to which the interface belongs.

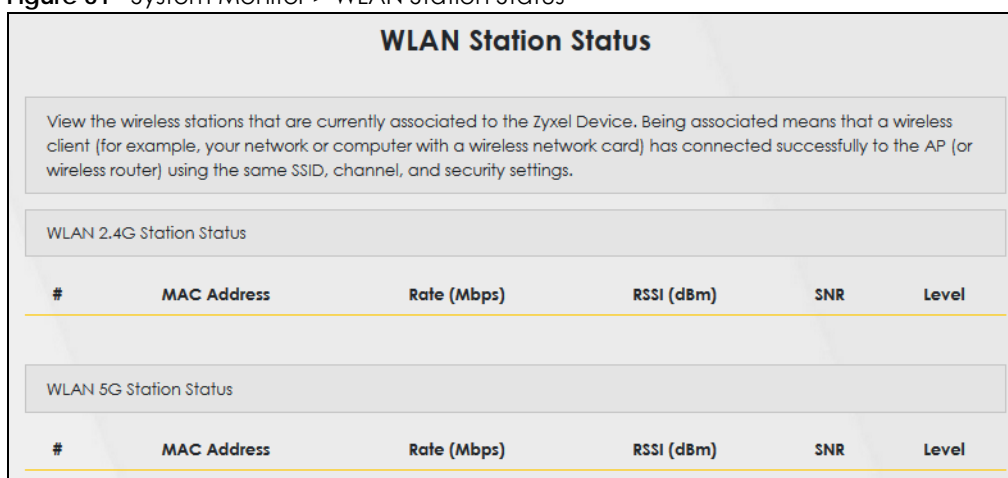

CHAPTER 10

WLAN Station Status

10.1 WLAN Station Status Overview

Click **System Monitor > WLAN Station Status** to open the following screen. Use this screen to view information and status of the wireless stations (wireless clients) that are currently associated with the WX3401-B0. Being associated means that a wireless client (for example, your computer with a wireless network card installed) has connected successfully to an AP (or wireless router) using the same SSID, channel, and WiFi security settings.

Figure 61 System Monitor > WLAN Station Status

The screenshot shows the 'WLAN Station Status' interface. At the top, there is a title 'WLAN Station Status' and a text box explaining that it shows wireless stations associated with the Zyxel Device. Below this, there are two sections: 'WLAN 2.4G Station Status' and 'WLAN 5G Station Status'. Each section contains a table with columns for '#', 'MAC Address', 'Rate (Mbps)', 'RSSI (dBm)', 'SNR', and 'Level'.

The following table describes the labels in this screen.

Table 29 System Monitor > WLAN Station Status

LABEL	DESCRIPTION
#	This is the index number of an associated wireless station.
MAC Address	This field displays the MAC address of an associated wireless station.
Rate (Mbps)	This field displays the transmission rate of WiFi traffic between an associated wireless station and the WX3401-B0.
RSSI (dBm)	The RSSI (Received Signal Strength Indicator) field shows the WiFi signal strength of the station's wireless connection. The normal range is -30dBm to -79dBm. If the value drops below -80dBm, try moving the associated wireless station closer to the WX3401-B0 to get better signal strength.

Table 29 System Monitor > WLAN Station Status (continued)

LABEL	DESCRIPTION
SNR	<p>The Signal-to-Noise Ratio (SNR) is the ratio between the received signal power and the received noise power.</p> <p>The normal range is 15 to 40. If the value drops below 15, try moving the associated wireless station closer to the WX3401-B0 to get better quality WiFi.</p>
Level	<p>This field displays a number which represents the strength of the WiFi signal between an associated wireless station and the WX3401-B0. The WX3401-B0 uses the RSSI and SNR values to determine the strength of the WiFi signal.</p> <p>5 means the WX3401-B0 is receiving an excellent WiFi signal.</p> <p>4 means the WX3401-B0 is receiving a very good WiFi signal.</p> <p>3 means the WX3401-B0 is receiving a weak WiFi signal.</p> <p>2 means the WX3401-B0 is receiving a very weak WiFi signal.</p> <p>1 means the WX3401-B0 is not receiving a WiFi signal.</p>

CHAPTER 11

System

11.1 System Overview

In the **System** screen, you can name your WX3401-B0 (Host) and give it an associated domain name. Domain is the name given to a network. It will be required to reach a network from an external point (like the Internet). Knowing the domain name will allow you to reach a particular network, and knowing the host name will allow you to reach a particular device. For this reason, accessing a device from another device within a network may work with just the host name (without the use of the domain name).

11.2 System Settings

Click **Maintenance > System** to open the following screen. Assign a unique name to the WX3401-B0 so it can be easily recognized on your network. You can use up to 30 characters, including spaces.

Figure 62 Maintenance > System

System

In the **System** screen, you can name your Zyxel Device (Host) and give it an associated domain name for identification purposes.

Assign a unique name to the Zyxel Device so it can be easily recognized on your network. You can use up to 30 characters, including spaces.

Host Name

Cancel **Apply**

The following table describes the labels in this screen.

Table 30 Maintenance > System

LABEL	DESCRIPTION
Host Name	Type a host name for your WX3401-B0. Enter a descriptive name of up to 16 alphanumeric characters, not including spaces, underscores, and dashes.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

CHAPTER 12

User Account

12.1 User Account Overview

In the **User Account** screen, you can view the settings of the 'admin' and other user accounts that you use to log into the WX3401-B0 to manage it.

12.2 User Account Settings

Click **Maintenance > User Account** to open the following screen. Use this screen to create or manage user accounts and their privileges on the WX3401-B0.

Figure 63 Maintenance > User Account

User Account

In the **User Account** screen, you can view the settings of the "admin" and other user accounts that you use to log into the Zyxel Device.

Use this screen to create or manage user accounts and their privileges on the Zyxel Device.

+ Add New Account

#	Active	User Name	Retry Times	Idle Timeout	Lock Period	Group	Modify
1	<input checked="" type="checkbox"/>	admin	0	60	5	Administrator	
2	<input checked="" type="checkbox"/>	Zyxel	3	5	5	User	

Cancel Apply

The following table describes the labels in this screen.

Table 31 Maintenance > User Account

LABEL	DESCRIPTION
Add New Account	Click this button to add a new user account.
#	This is the index number of the user account.
Active	This field indicates whether the user account is active or not. Clear the check box to disable the user account. Select the check box to enable it.
User Name	This field displays the name of the account used to log into the WX3401-B0 Web Configurator.

Table 31 Maintenance > User Account (continued)

LABEL	DESCRIPTION
Retry Times	This field displays the number of times consecutive wrong passwords can be entered for this account. 0 means there is no limit.
Idle Timeout	This field displays the length of inactive time before the WX3401-B0 will automatically log the user out of the Web Configurator.
Lock Period	This field displays the length of time a user must wait before attempting to log in again after a number if consecutive wrong passwords have been entered as defined in Retry Times .
Group	This field displays whether this user has Administrator or User privileges.
Modify	Click the Edit icon to configure the entry. Click the Delete icon to remove the entry.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

12.2.1 User Account Add/Edit

Click **Add New Account** or the **Edit** icon of an existing account in the **Maintenance > User Account** to open the following screen.

Figure 64 Maintenance > User Account > Add/Edit

The following table describes the labels in this screen.

Table 32 Maintenance > User Account > Add/Edit

LABEL	DESCRIPTION
Active	Select Enable or Disable to activate or deactivate the user account.
User Name	Enter a new name for the account. The User Name must contain 1 to 15 characters, including 0 to 9, a to z, and !@#%*()-_+~=~,{}[]\ . Spaces are not allowed.

Table 32 Maintenance > User Account > Add/Edit (continued)

LABEL	DESCRIPTION
Password	Type your new system password. The Password must contain 6 to 64 characters, including 0 to 9 and a to z. Note that as you type a password, the screen displays a (*) for each character you type. After you change the password, use the new password to access the WX3401-B0.
Verify Password	Type the new password again for confirmation.
Retry Times	Enter the number of times consecutive wrong passwords can be entered for this account. 0 means there is no limit.
Idle Timeout	Enter the length of inactive time before the WX3401-B0 will automatically log the user out of the Web Configurator.
Lock Period	Enter the length of time a user must wait before attempting to log in again after a number if consecutive wrong passwords have been entered as defined in Retry Times .
Group	Specify whether this user will have Administrator or User privileges. Administrator and User privileges are mostly the same, but the following menu items will only display when you log in as an Administrator . <ul style="list-style-type: none"> • Network Setting • Security Settings • Maintenance > System
Cancel	Click Cancel to exit this screen without saving any changes.
OK	Click OK to save your changes.

CHAPTER 13

Remote Management

13.1 Remote Management Overview

Use remote management to control what services you can use through which interface(s) in order to manage the WX3401-B0.

13.1.1 What You Can Do in this Chapter

- Use the **Remote Management** screen to allow various approaches to access the WX3401-B0 remotely from a LAN connection ([Section 13.2 on page 128](#)).

Note: The WX3401-B0 is managed using the Web Configurator.

13.2 MGMT Services

Use this screen to configure through which interface(s), each service can access the WX3401-B0. You can also specify service port numbers computers must use to connect to the WX3401-B0. Click **Maintenance > Remote Management > Remote Management** to open the following screen.

Figure 65 Maintenance > Remote Management > Remote Management

The following table describes the fields in this screen.

Table 33 Maintenance > Remote Management > Remote Management

LABEL	DESCRIPTION
Service	This is the service list you may use to access the WX3401-B0. <ul style="list-style-type: none">• HTTP provides a non secured way.• HTTPS is the secured version of HTTP, it makes sure that your data cannot be read during transmission.• TELNET provides a way to control your WX3401-B0 remotely.• SSH prevents leakage of data during remote management. Additionally, it can encrypt all transmitted data.• PING is a diagnostic tool that can check if your WX3401-B0 is connected to the Internet.
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes back to the WX3401-B0.

CHAPTER 14

Time Settings

14.1 Time Settings Overview

This chapter shows you how to configure the WX3401-B0's system date and time.

14.2 Time

For effective scheduling and logging, the WX3401-B0's system time must be accurate. Use this screen to configure the WX3401-B0's time based on your local time zone. You can enter a time server address, select the time zone where the WX3401-B0 is physically located, and configure Daylight Savings settings if needed.

Click **Maintenance** > **Time** to open the following screen.

Figure 66 Maintenance > Time

Time

Use this screen to configure the Zyxel Device's time based on your local time zone. You can enter a time server address, select the time zone where the Zyxel Device is physically located, and configure Daylight Savings settings if needed.

The following table describes the fields in this screen.

Table 34 Maintenance > Time

LABEL	DESCRIPTION
Current Date/Time	
Current Time	This field displays the time of your WX3401-B0. Each time you reload this page, the WX3401-B0 synchronizes the time with the time server.
Current Date	This field displays the date of your WX3401-B0. Each time you reload this page, the WX3401-B0 synchronizes the date with the time server.
Time and Date Setup	
First ~ Fifth Time Server Address	Select an NTP time server from the drop-down list box. Otherwise, select Other and enter the IP address or URL (up to 29 extended ASCII characters in length) of your time server. Select None if you do not want to configure the time server. Check with your ISP/network administrator if you are unsure of this information.
Time Zone	

Table 34 Maintenance > Time (continued)

LABEL	DESCRIPTION
Time Zone	Choose the time zone of your location. This will set the time difference between your time zone and Greenwich Mean Time (GMT).
Daylight Savings	Daylight Saving Time is a period from late spring to early fall when many countries set their clocks ahead of normal local time by one hour to give more daytime light in the evening.
Active	Click this switch to enable or disable Daylight Saving Time. When the switch goes to the right  , the function is enabled. Otherwise, it is not.
Start Rule	<p>Configure the day and time when Daylight Saving Time starts if you enabled Daylight Saving. You can select a specific date in a particular month or a specific day of a specific week in a particular month. The Hour field uses the 24 hour format. Here are a couple of examples:</p> <p>Daylight Saving Time starts in most parts of the United States on the second Sunday of March. Each time zone in the United States starts using Daylight Saving Time at 2 A.M. local time. So in the United States, set the day to Second, Sunday, the month to March and the time to 2 in the Hour field.</p> <p>Daylight Saving Time starts in the European Union on the last Sunday of March. All of the time zones in the European Union start using Daylight Saving Time at the same moment (1 A.M. GMT or UTC). So in the European Union you would set the day to Last, Sunday and the month to March. The time you select in the o'clock field depends on your time zone. In Germany for instance, you would select 2 in the Hour field because Germany's time zone is one hour ahead of GMT or UTC (GMT+1).</p>
End Rule	<p>Configure the day and time when Daylight Saving Time ends if you enabled Daylight Saving. You can select a specific date in a particular month or a specific day of a specific week in a particular month. The Hour field uses the 24 hour format. Here are a couple of examples:</p> <p>Daylight Saving Time ends in the United States on the first Sunday of November. Each time zone in the United States stops using Daylight Saving Time at 2 A.M. local time. So in the United States you would set the day to First, Sunday, the month to November and the time to 2 in the Hour field.</p> <p>Daylight Saving Time ends in the European Union on the last Sunday of October. All of the time zones in the European Union stop using Daylight Saving Time at the same moment (1 A.M. GMT or UTC). So in the European Union you would set the day to Last, Sunday, and the month to October. The time you select in the o'clock field depends on your time zone. In Germany for instance, you would select 2 in the Hour field because Germany's time zone is one hour ahead of GMT or UTC (GMT+1).</p>
Cancel	Click Cancel to restore the default or previously saved settings.
Apply	Click Apply to save your changes.

CHAPTER 15

Firmware Upgrade

15.1 Firmware Upgrade Overview

This screen lets you upload new firmware to your WX3401-B0. You can download new firmware releases from your nearest Zyxel FTP site (or www.zyxel.com) to upgrade your device's performance.

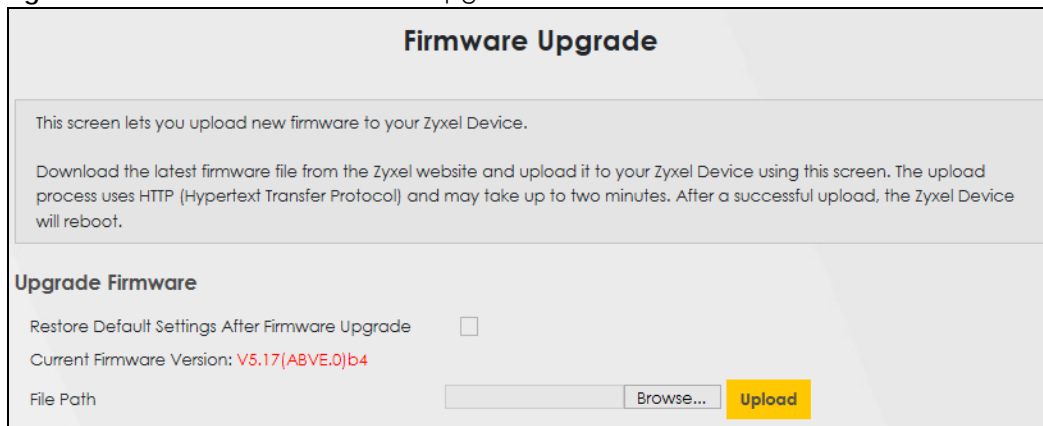

Only use firmware for your device's specific model. Refer to the label on the bottom of your WX3401-B0.

15.2 Firmware Upgrade Settings

Click **Maintenance > Firmware Upgrade** to open the following screen. Download the latest firmware file from the Zyxel website and upload it to your WX3401-B0 using this screen. The upload process uses HTTP (Hypertext Transfer Protocol) and may take up to two minutes. After a successful upload, the WX3401-B0 will reboot.

Do NOT turn off the WX3401-B0 while firmware upload is in progress!

Figure 67 Maintenance > Firmware Upgrade

The screenshot shows the 'Firmware Upgrade' settings page. At the top, the title 'Firmware Upgrade' is centered. Below it, a text box contains instructions: 'This screen lets you upload new firmware to your Zyxel Device. Download the latest firmware file from the Zyxel website and upload it to your Zyxel Device using this screen. The upload process uses HTTP (Hypertext Transfer Protocol) and may take up to two minutes. After a successful upload, the Zyxel Device will reboot.' Below this, the section 'Upgrade Firmware' contains a checkbox for 'Restore Default Settings After Firmware Upgrade' which is currently unchecked. Underneath, it displays 'Current Firmware Version: V5.17(ABVE.0)b4'. At the bottom, there is a 'File Path' label, an empty text input field, a 'Browse...' button, and a yellow 'Upload' button.

The following table describes the labels in this screen. After you see the firmware updating screen, wait two minutes before logging into the WX3401-B0 again.

Table 35 Maintenance > Firmware Upgrade

LABEL	DESCRIPTION
Upgrade Firmware	
Restore Default Settings After Firmware Upgrade	Select the check box to have the WX3401-B0 automatically reset itself after the new firmware is uploaded.
Current Firmware Version	This is the present Firmware version and the date created.
File Path	Type the location of the file you want to upload in this field or click Browse to find it.
Browse	Click this to find the .bin file you want to upload. Remember that you must decompress compressed (.zip) files before you can upload them.
Upload	Click this to begin the upload process. This process may take up to two minutes.

Figure 68 Firmware Uploading

After two minutes, log in again and check your new firmware version in the **Status** screen.

If the upload was not successful, the following screen will appear. Click **OK** to go back to the **Firmware Upgrade** screen.

Figure 69 Error Message

Note that the WX3401-B0 automatically restarts during the upload, causing a temporary network disconnect. In some operating systems, you may see the following icon on your desktop.

Network Temporarily Disconnected

CHAPTER 16

Backup/Restore

16.1 Backup/Restore Overview

The **Backup/Restore** screen allows you to backup and restore device configurations. You can also reset your device settings back to the factory default.

16.2 Backup/Restore Settings

Click **Maintenance > Backup/Restore**. Information related to factory default settings and backup configuration are shown in this screen. You can also use this to restore previous device configurations.

Figure 70 Maintenance > Backup/Restore

Backup/Restore

Information related to factory default settings and backup configuration are shown in this screen. You can also use this to restore previous device configurations.

Backup Configuration allows you to back up (save) the Zyxel Device's current configuration to a file on your computer. Once your Zyxel Device is configured and functioning properly, it is highly recommended that you back up your configuration file before making configuration changes.

Restore Configuration allows you to upload a new or previously saved configuration file from your computer to your Zyxel Device.

Backup Configuration

Click Backup to save the current configuration of your system to your computer.

Backup

Restore Configuration

To restore a previously saved configuration file to your system, browse to the location of the configuration file and click Upload.

File Path

Back to Factory Default Settings

Click Reset to clear all user-entered configuration information and return to factory default settings. After resetting, the

- Password is printed on a label on the bottom of the device, written after the text "Password".
- LAN IP address will be 192.168.1.2

Reset

Backup Configuration

Backup Configuration allows you to back up (save) the WX3401-B0's current configuration to a file on your computer. Once your WX3401-B0 is configured and functioning properly, it is highly recommended that you back up your configuration file before making configuration changes. The backup configuration file will be useful in case you need to return to your previous settings.

Click **Backup** to save the WX3401-B0's current configuration to your computer.

Restore Configuration

Restore Configuration allows you to upload a new or previously saved configuration file from your computer to your WX3401-B0.

Table 36 Restore Configuration

LABEL	DESCRIPTION
File Path	Type in the location of the file you want to upload in this field or click Browse to find it.
Browse	Click this to find the file you want to upload. Remember that you must decompress compressed (.ZIP) files before you can upload them.
Upload	Click this to begin the upload process.

Do NOT turn off the WX3401-B0 while configuration file upload is in progress.

After the WX3401-B0 configuration has been restored successfully, the login screen appears. Login again to restart the WX3401-B0.

The WX3401-B0 automatically restarts in this time causing a temporary network disconnect. In some operating systems, you may see the following icon on your desktop.

Figure 71 Network Temporarily Disconnected

If you uploaded the default configuration file you may need to change the IP address of your computer to be in the same subnet as that of the default device IP address (192.168.1.2).

If the upload was not successful, the following screen will appear. Click **OK** to go back to the **Backup/Restore** screen.

Figure 72 Configuration Upload Error

Reset to Factory Defaults

Click the **Reset** button to clear all user-entered configuration information and return the WX3401-B0 to its factory defaults. The following warning screen appears.

Figure 73 Reset Warning Message

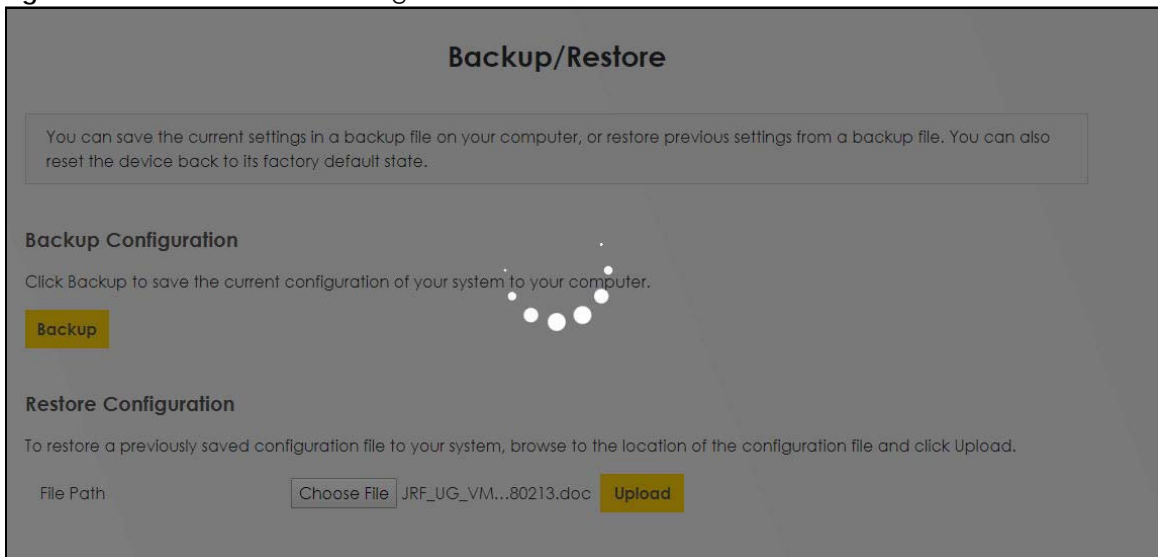

Figure 74 Reset In Process Message

You can also press the **RESET** button on the rear panel to reset the factory defaults of your WX3401-B0. Refer to [Section 2.5 on page 23](#) for more information on the **RESET** button.

16.3 Reboot

System Reboot allows you to reboot the WX3401-B0 remotely without turning the power off. You may need to do this if the WX3401-B0 hangs, for example.

Click **Maintenance > Reboot**. Click **Reboot** to have the WX3401-B0 reboot. This does not affect the WX3401-B0's configuration.

Figure 75 Maintenance > Reboot

CHAPTER 17

Diagnostic

17.1 Diagnostic Overview

The **Diagnostic** screens display information to help you identify problems with the WX3401-B0.

The route between a Central Office Very-high-bit-rate Digital Subscriber Line (CO VDSL) switch and one of its Customer-Premises Equipment (CPE) may go through switches owned by independent organizations. A connectivity fault point generally takes time to discover and impacts subscriber's network access. In order to eliminate the management and maintenance efforts, IEEE 802.1ag is a Connectivity Fault Management (CFM) specification which allows network administrators to identify and manage connection faults. Through discovery and verification of the path, CFM can detect, analyze and isolate connectivity faults in bridged LANs.

17.1.1 What You Can Do in this Chapter

- The **Ping & TraceRoute** screen lets you ping an IP address or trace the route packets take to a host ([Section 17.3 on page 141](#)).

17.2 What You Need to Know

The following terms and concepts may help as you read through this chapter.

How CFM Works

A Maintenance Association (MA) defines a VLAN and associated Maintenance End Point (MEP) ports on the device under a Maintenance Domain (MD) level. An MEP port has the ability to send Connectivity Check Messages (CCMs) and get other MEP ports information from neighbor devices' CCMs within an MA.

CFM provides two tests to discover connectivity faults.

- Loopback test - checks if the MEP port receives its Loop Back Response (LBR) from its target after it sends the Loop Back Message (LBM). If no response is received, there might be a connectivity fault between them.
- Link trace test - provides additional connectivity fault analysis to get more information on where the fault is. If an MEP port does not respond to the source MEP, this may indicate a fault. Administrators can take further action to check and resume services from the fault according to the line connectivity status report.

17.3 Ping & TraceRoute

Use this screen use ping, traceroute, or nslookup for troubleshooting. Ping and traceroute are used to test whether a particular host is reachable. After entering an IP address and clicking on one of the buttons to start a test, the results will be shown in the Ping/Traceroute Test area. Use nslookup to find the IP address for a host name and vice versa. Click **Maintenance > Diagnostic** to open the screen shown next.

Figure 76 Maintenance > Diagnostic

Diagnostic

The **Diagnostic** screens display information to help you identify problems with the Zyxel Device.

Use this screen to ping, traceroute, or nslookup for troubleshooting. Ping and traceroute are used to test whether a particular host is reachable. After entering an IP address and clicking on one of the buttons to start a test, the results will be shown in the Ping/Traceroute Test area. Use nslookup to find the IP address for a host name and vice versa.

Ping/TraceRoute Test

TCP/IP

Address

The following table describes the fields in this screen.

Table 37 Maintenance > Diagnostic

LABEL	DESCRIPTION
Address	Type the IP address of a computer that you want to perform ping, traceroute, or nslookup in order to test a connection.
Ping	Click this to ping the IPv4 address that you entered.
Ping 6	Click this to ping the IPv6 address that you entered.
Trace Route	Click this to display the route path and transmission delays between the WX3401-B0 to the IPv4 address that you entered.
Trace Route 6	Click this to display the route path and transmission delays between the WX3401-B0 to the IPv6 address that you entered.
Nslookup	Click this button to perform a DNS lookup on the IP address of a computer you enter.

PART III

Troubleshooting and Appendices

Appendices contain general information. Some information may not apply to your WX3401-B0.

CHAPTER 18

Troubleshooting

This chapter offers some suggestions to solve problems you might encounter. The potential problems are divided into the following categories.

- [Power, Hardware Connections, and LEDs](#)
- [WX3401-B0 Access and Login](#)
- [Internet Access](#)
- [Wireless Internet Access](#)
- [IP Address Setup](#)
- [Resetting the WX3401-B0 to Its Factory Defaults](#)
- [MPro Mesh App Problems](#)
- [Daisy Chain Problems](#)

18.1 Power, Hardware Connections, and LEDs

[The WX3401-B0 does not turn on. None of the LEDs turn on.](#)

- 1 Make sure the WX3401-B0 is turned on.
- 2 Make sure you are using the power adapter included with the WX3401-B0.
- 3 Make sure the power adapter is connected to the WX3401-B0 and plugged in to an appropriate power source. Make sure the power source is turned on.
- 4 Turn the WX3401-B0 off and on.
- 5 If the problem continues, contact the vendor.

[One of the LEDs does not behave as expected.](#)

- 1 Make sure you understand the normal behavior of the LED. See [Table 5 on page 36](#).
- 2 Check the hardware connections.
- 3 Inspect your cables for damage. Contact the vendor to replace any damaged cables.

- 4 Turn the WX3401-B0 off and on.
- 5 If the problem continues, contact the vendor.

18.2 WX3401-B0 Access and Login

I forgot the IP address for the WX3401-B0.

- 1 The default LAN IP address is 192.168.1.2.
- 2 If your router assigns an IP address to the WX3401-B0, you can find your new IP address on the **Gateway Detail** screen using the MPro Mesh App (See [Section 4.4.2 on page 44](#) for more information) or log into your router's Web Configurator.
- 3 If this does not work, you have to reset the device to its factory defaults. See [Section 2.5.1 on page 23](#).

I forgot the password.

- 1 See the cover page for the default login names and associated passwords.
- 2 If those do not work, you have to reset the device to its factory defaults. See [Section 2.5.1 on page 23](#).

I cannot see or access the **Login** screen in the Web Configurator.

- 1 Make sure you are using the correct IP address.
 - The default IP address is [192.168.1.2](#). See [Chapter 3 on page 24](#) for more details.
 - If you changed the IP address (See [Section 7.2 on page 115](#)), use the new IP address.
 - If you changed the IP address and have forgotten it, see the troubleshooting suggestions for [I forgot the IP address for the WX3401-B0](#).
 - Make sure your computer has an IP address in the same subnet as the WX3401-B0. Your computer should have an IP address from 192.168.1.3 to 192.168.1.254. See [Section 18.5 on page 147](#).
- 2 Check the hardware connections, and make sure the LEDs are behaving as expected. See [Table 5 on page 36](#).
- 3 Make sure your Internet browser does not block pop-up windows and has JavaScripts and Java enabled.
- 4 If it is possible to log in from another interface, check the service control settings for HTTP and HTTPS (**Maintenance > Remote Management**).

- 5 Reset the device to its factory defaults, and try to access the WX3401-B0 with the default IP address. See [Section 2.5.1 on page 23](#).
- 6 If the problem continues, contact the network administrator or vendor, or try one of the advanced suggestions.

Advanced Suggestions

- Make sure you have logged out of any earlier management sessions using the same user account even if they were through a different interface or using a different browser.

I can see the [Login](#) screen, but I cannot log in to the WX3401-B0.

- 1 Make sure you have entered the password correctly. See the cover page for the default login names and associated passwords. The field is case-sensitive, so make sure [Caps Lock] is not on.
- 2 You cannot log in to the Web Configurator while someone is using Telnet to access the WX3401-B0. Log out of the WX3401-B0 in the other session, or ask the person who is logged in to log out.
- 3 Turn the WX3401-B0 off and on.
- 4 If this does not work, you have to reset the device to its factory defaults. See [Section 2.5.1 on page 23](#).

18.3 Internet Access

I cannot access the Internet.

- 1 Check the hardware connections and follow the instructions at [Section 4.3 on page 31](#) depending on if you choose to use a wired or a wireless connection. Make sure the LEDs are behaving as expected. See the **Quick Start Guide** and [Table 5 on page 36](#).
- 2 Make sure you entered your ISP account information correctly in the **Network Setting > Home Networking** screen. These fields are case-sensitive, so make sure [Caps Lock] is not on.
- 3 If you are trying to access the Internet wirelessly, make sure that you enable WiFi on the WX3401-B0 (the WX3401-B0's WiFi is enabled by default) and your wireless client, and that the wireless settings in the wireless client are the same as the settings in the WX3401-B0. (see [Section 6.3 on page 88](#) for more information)
- 4 Disconnect all the cables from your device and reconnect them.
- 5 If the problem continues, contact your ISP.

I cannot connect to the Internet using an Ethernet connection.

- Make sure you have the Ethernet LAN port connected to a MODEM or Router. (see [Section 4.3.2 on page 36](#) for more information)

I cannot access the WX3401-B0 anymore. I had access to the WX3401-B0, but my connection is not available anymore.

- 1 Your session with the WX3401-B0 may have expired. Try logging into the WX3401-B0 again.
- 2 Check the hardware connections, and make sure the LEDs are behaving as expected. See the **Quick Start Guide** and [Table 5 on page 36](#).
- 3 Turn the WX3401-B0 off and on.
- 4 If the problem continues, contact your vendor.

I cannot access the WX3401-B0 using WiFi.

- Make sure the WX3401-B0 is working in AP or Repeater mode and the wireless LAN is enabled on the WX3401-B0.
- Make sure the wireless adapter on the wireless client is working properly.
- Make sure the wireless adapter installed on your computer is IEEE 802.11 compatible and supports the same wireless standard as the WX3401-B0.
- Make sure your computer (with a wireless adapter installed) is within the transmission range of the WX3401-B0.
- Check that both the WX3401-B0 and your wireless station are using the same wireless and wireless security settings.

18.4 Wireless Internet Access

What factors may cause intermittent or unstabled wireless connection? How can I solve this problem?

The following factors may cause interference:

- Obstacles: walls, ceilings, furniture, and so on.
- Building Materials: metal doors, aluminum studs.
- Electrical devices: microwaves, monitors, electric motors, cordless phones, and other wireless devices.

To optimize the speed and quality of your wireless connection, you can:

- Move your wireless device closer to the AP if the signal strength is low.
- Reduce wireless interference that may be caused by other wireless networks or surrounding wireless electronics such as cordless phones.
- Place the AP where there are minimum obstacles (such as walls and ceilings) between the AP and the wireless client.
- Reduce the number of wireless clients connecting to the same AP simultaneously, or add additional APs if necessary.
- Try closing some programs that use the Internet, especially peer-to-peer applications. If the wireless client is sending or receiving a lot of information, it may have too many programs open that use the Internet.

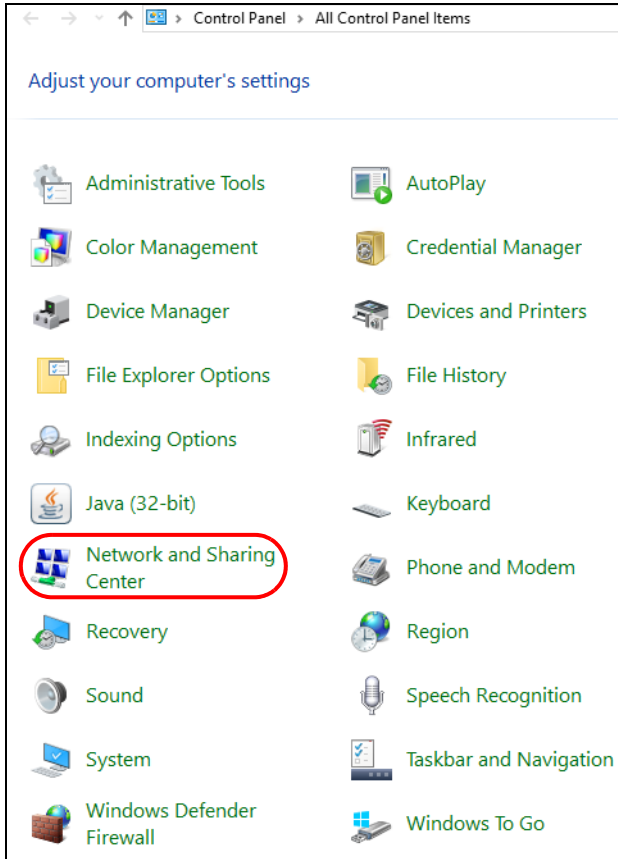

What is a Server Set ID (SSID)?

An SSID is a name that uniquely identifies a wireless network. The AP and all the clients within a wireless network must use the same SSID.

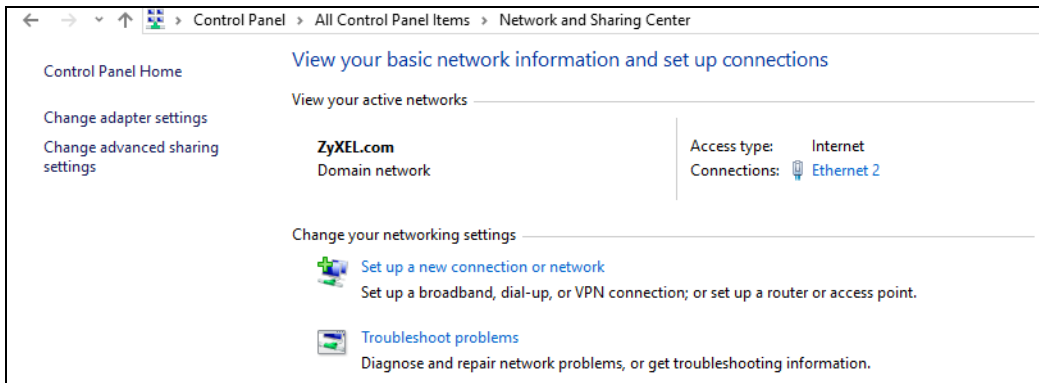

18.5 IP Address Setup

I need to set the computer's IP address to be in the same subnet as the WX3401-B0.

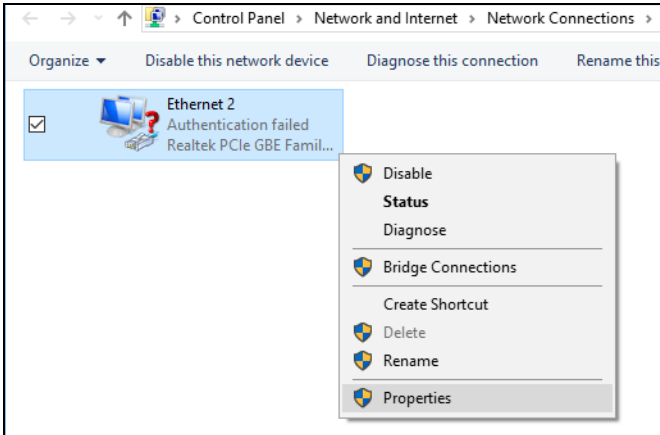

- 1 In Windows 10, open the **Control Panel**.
- 2 Click **Network and Internet** (this field may be missing in your version) > **Network and Sharing Center**.

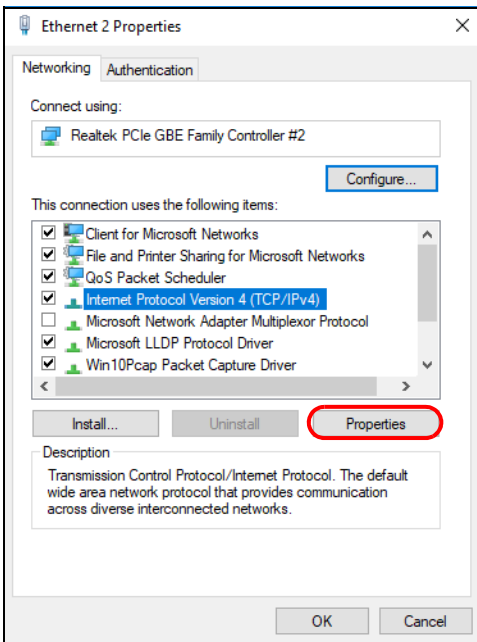

- 3 Click **Change adapter settings**.

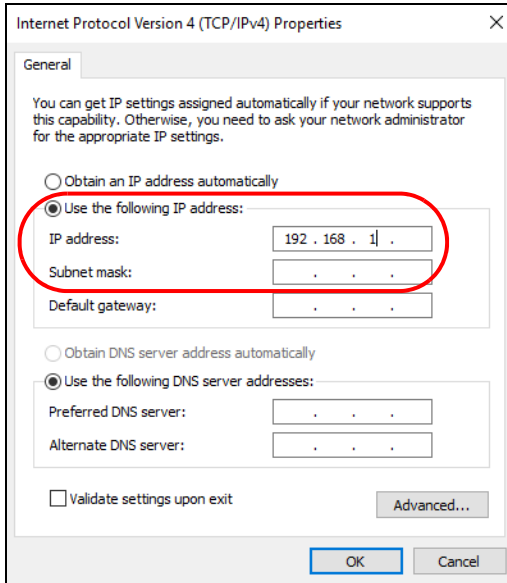

- 4 Right-click the **Ethernet** icon, and then select **Properties**.

- 5 Click **Internet Protocol Version 4 (TCP/IPv4)** and then click **Properties**.

- 6 Select **Use the following IP address** and enter an IP address from 192.168.1.3 to 192.168.1.254. The **Subnet mask** will be entered automatically.

- 7 Click **OK** when you are done and close all windows.

18.6 Resetting the WX3401-B0 to Its Factory Defaults

If you reset the WX3401-B0, you lose all of the changes you have made. The WX3401-B0 re-loads its default settings, and the password resets to the back-label default key. You have to make all of your changes again.

You will lose all of your changes when you reset the WX3401-B0 to its factory defaults.

- You can back up the configuration you made before resetting the WX3401-B0.

To reset the WX3401-B0,

- Make sure the power LED is on.
- Press the **RESET** button for longer than 5 seconds, the Power LED begins to blink, to set the WX3401-B0 back to its factory-default configuration.

OR

Click **Maintenance > Restore** and then click **Reset**.

- If the WX3401-B0 restarts automatically, wait for the WX3401-B0 to finish restarting, and log in to the Web Configurator. The password is in the device label.

If the WX3401-B0 does not restart automatically, disconnect and reconnect the WX3401-B0. Then, follow the directions above again.

- You can upload a previously saved configuration file from your computer to the WX3401-B0 after resetting the device.

18.7 MPro Mesh App Problems

I cannot use the MPro Mesh app to manage my wireless network.

- Make sure you connect your mobile device to the controller (Zyxel MPro Mesh Router in **Scenario 1** and WX3401-B0-1 in **Scenario 2**) in order to manage the wireless network.
- Make sure you use the controller's (Zyxel MPro Mesh Router in **Scenario 1** and WX3401-B0-1 in **Scenario 2**) SSID and key when logging in with the app.

18.8 Daisy Chain Problems

I cannot add another extender to my daisy chain network.

- Check your device mode. The mode of your WX3401-B0 will affect how you add another extender to your network. For more information on modes, see [Section 1.1 on page 11](#). For more information on how to set your device in AP or Repeater mode, see [Section 1.6 on page 17](#).
- If you are using the WPS PBC (Push Button Configuration) method, make sure you press the WPS button in the right way. For more information on adding extenders using WPS button, see [Section 2.4.1 on page 22](#).
- If you are using the MPro Mesh app for adding extenders to your network, make sure you choose the right scenario.

With MPro Mesh Router, follow the steps in **Scenario 1** to add extenders to your network (see [Section 4.3.1 on page 31](#) for more information).

With non-MPro Mesh Router, follow the steps in **Scenario 2** to add extenders to your network (see [Section 4.3.2 on page 36](#) for more information).

APPENDIX A

Customer Support

In the event of problems that cannot be solved by using this manual, you should contact your vendor. If you cannot contact your vendor, then contact a Zyxel office for the region in which you bought the device.

See <https://www.zyxel.com/homepage.shtml> and also https://www.zyxel.com/about_zyxel/zyxel_worldwide.shtml for the latest information.

Please have the following information ready when you contact an office.

Required Information

- Product model and serial number.
- Warranty Information.
- Date that you received your device.
- Brief description of the problem and the steps you took to solve it.

APPENDIX B

IPv6

Overview

IPv6 (Internet Protocol version 6), is designed to enhance IP address size and features. The increase in IPv6 address size to 128 bits (from the 32-bit IPv4 address) allows up to 3.4×10^{38} IP addresses.

IPv6 Addressing

The 128-bit IPv6 address is written as eight 16-bit hexadecimal blocks separated by colons (:). This is an example IPv6 address `2001:0db8:1a2b:0015:0000:0000:1a2f:0000`.

IPv6 addresses can be abbreviated in two ways:

- Leading zeros in a block can be omitted. So `2001:0db8:1a2b:0015:0000:0000:1a2f:0000` can be written as `2001:db8:1a2b:15:0:0:1a2f:0`.
- Any number of consecutive blocks of zeros can be replaced by a double colon. A double colon can only appear once in an IPv6 address. So `2001:0db8:0000:0000:1a2f:0000:0000:0015` can be written as `2001:0db8::1a2f:0000:0000:0015`, `2001:0db8:0000:0000:1a2f::0015`, `2001:db8::1a2f:0:0:15` or `2001:db8:0:0:1a2f::15`.

Prefix and Prefix Length

Similar to an IPv4 subnet mask, IPv6 uses an address prefix to represent the network address. An IPv6 prefix length specifies how many most significant bits (start from the left) in the address compose the network address. The prefix length is written as “/x” where x is a number. For example,

`2001:db8:1a2b:15::1a2f:0/32`

means that the first 32 bits (`2001:db8`) is the subnet prefix.

Link-local Address

A link-local address uniquely identifies a device on the local network (the LAN). It is similar to a “private IP address” in IPv4. You can have the same link-local address on multiple interfaces on a device. A link-local unicast address has a predefined prefix of `fe80::/10`. The link-local unicast address format is as follows.

Table 38 Link-local Unicast Address Format

1111 1110 10	0	Interface ID
10 bits	54 bits	64 bits

Global Address

A global address uniquely identifies a device on the Internet. It is similar to a “public IP address” in IPv4. A global unicast address starts with a 2 or 3.

Unspecified Address

An unspecified address (0:0:0:0:0:0 or ::) is used as the source address when a device does not have its own address. It is similar to "0.0.0.0" in IPv4.

Loopback Address

A loopback address (0:0:0:0:0:1 or ::1) allows a host to send packets to itself. It is similar to "127.0.0.1" in IPv4.

Multicast Address

In IPv6, multicast addresses provide the same functionality as IPv4 broadcast addresses. Broadcasting is not supported in IPv6. A multicast address allows a host to send packets to all hosts in a multicast group.

Multicast scope allows you to determine the size of the multicast group. A multicast address has a predefined prefix of ff00::/8. The following table describes some of the predefined multicast addresses.

Table 39 Predefined Multicast Address

MULTICAST ADDRESS	DESCRIPTION
FF01:0:0:0:0:0:1	All hosts on a local node.
FF01:0:0:0:0:0:2	All routers on a local node.
FF02:0:0:0:0:0:1	All hosts on a local connected link.
FF02:0:0:0:0:0:2	All routers on a local connected link.
FF05:0:0:0:0:0:2	All routers on a local site.
FF05:0:0:0:0:1:3	All DHCP servers on a local site.

The following table describes the multicast addresses which are reserved and can not be assigned to a multicast group.

Table 40 Reserved Multicast Address

MULTICAST ADDRESS
FF00:0:0:0:0:0:0
FF01:0:0:0:0:0:0
FF02:0:0:0:0:0:0
FF03:0:0:0:0:0:0
FF04:0:0:0:0:0:0
FF05:0:0:0:0:0:0
FF06:0:0:0:0:0:0
FF07:0:0:0:0:0:0
FF08:0:0:0:0:0:0
FF09:0:0:0:0:0:0
FF0A:0:0:0:0:0:0
FF0B:0:0:0:0:0:0
FF0C:0:0:0:0:0:0
FF0D:0:0:0:0:0:0

Table 40 Reserved Multicast Address (continued)

MULTICAST ADDRESS
FF0E:0:0:0:0:0:0:0
FF0F:0:0:0:0:0:0:0

Subnet Masking

Both an IPv6 address and IPv6 subnet mask compose of 128-bit binary digits, which are divided into eight 16-bit blocks and written in hexadecimal notation. Hexadecimal uses four bits for each character (1 ~ 10, A ~ F). Each block's 16 bits are then represented by four hexadecimal characters. For example, FFFF:FFFF:FFFF:FFFF:FC00:0000:0000:0000.

Interface ID

In IPv6, an interface ID is a 64-bit identifier. It identifies a physical interface (for example, an Ethernet port) or a virtual interface (for example, the management IP address for a VLAN). One interface should have a unique interface ID.

EUI-64

The EUI-64 (Extended Unique Identifier) defined by the IEEE (Institute of Electrical and Electronics Engineers) is an interface ID format designed to adapt with IPv6. It is derived from the 48-bit (6-byte) Ethernet MAC address as shown next. EUI-64 inserts the hex digits ffe between the third and fourth bytes of the MAC address and complements the seventh bit of the first byte of the MAC address. See the following example.

MAC	00 : 13 : 49 : 12 : 34 : 56
EUI-64	02 : 13 : 49 : FF : FE : 12 : 34 : 56

Identity Association

An Identity Association (IA) is a collection of addresses assigned to a DHCP client, through which the server and client can manage a set of related IP addresses. Each IA must be associated with exactly one interface. The DHCP client uses the IA assigned to an interface to obtain configuration from a DHCP server for that interface. Each IA consists of a unique IAID and associated IP information.

The IA type is the type of address in the IA. Each IA holds one type of address. IA_NA means an identity association for non-temporary addresses and IA_TA is an identity association for temporary addresses. An IA_NA option contains the T1 and T2 fields, but an IA_TA option does not. The DHCPv6 server uses T1 and T2 to control the time at which the client contacts with the server to extend the lifetimes on any addresses in the IA_NA before the lifetimes expire. After T1, the client sends the server (**S1**) (from which the addresses in the IA_NA were obtained) a Renew message. If the time T2 is reached and the server does not respond, the client sends a Rebind message to any available server (**S2**). For an IA_TA, the client may send a Renew or Rebind message at the client's discretion.

DHCP Relay Agent

A DHCP relay agent is on the same network as the DHCP clients and helps forward messages between the DHCP server and clients. When a client cannot use its link-local address and a well-known multicast address to locate a DHCP server on its network, it then needs a DHCP relay agent to send a message to a DHCP server that is not attached to the same network.

The DHCP relay agent can add the remote identification (remote-ID) option and the interface-ID option to the Relay-Forward DHCPv6 messages. The remote-ID option carries a user-defined string, such as the system name. The interface-ID option provides slot number, port information and the VLAN ID to the DHCPv6 server. The remote-ID option (if any) is stripped from the Relay-Reply messages before the relay agent sends the packets to the clients. The DHCP server copies the interface-ID option from the Relay-Forward message into the Relay-Reply message and sends it to the relay agent. The interface-ID should not change even after the relay agent restarts.

Prefix Delegation

Prefix delegation enables an IPv6 router to use the IPv6 prefix (network address) received from the ISP (or a connected uplink router) for its LAN. The WX3401-B0 uses the received IPv6 prefix (for example, 2001:db2::/48) to generate its LAN IP address. Through sending Router Advertisements (RAs) regularly by multicast, the WX3401-B0 passes the IPv6 prefix information to its LAN hosts. The hosts then can use the prefix to generate their IPv6 addresses.

ICMPv6

Internet Control Message Protocol for IPv6 (ICMPv6 or ICMP for IPv6) is defined in RFC 4443. ICMPv6 has a preceding Next Header value of 58, which is different from the value used to identify ICMP for IPv4. ICMPv6 is an integral part of IPv6. IPv6 nodes use ICMPv6 to report errors encountered in packet processing and perform other diagnostic functions, such as "ping".

Neighbor Discovery Protocol (NDP)

The Neighbor Discovery Protocol (NDP) is a protocol used to discover other IPv6 devices and track neighbor's reachability in a network. An IPv6 device uses the following ICMPv6 messages types:

- Neighbor solicitation: A request from a host to determine a neighbor's link-layer address (MAC address) and detect if the neighbor is still reachable. A neighbor being "reachable" means it responds to a neighbor solicitation message (from the host) with a neighbor advertisement message.
- Neighbor advertisement: A response from a node to announce its link-layer address.
- Router solicitation: A request from a host to locate a router that can act as the default router and forward packets.

- Router advertisement: A response to a router solicitation or a periodical multicast advertisement from a router to advertise its presence and other parameters.

IPv6 Cache

An IPv6 host is required to have a neighbor cache, destination cache, prefix list and default router list. The WX3401-B0 maintains and updates its IPv6 caches constantly using the information from response messages. In IPv6, the WX3401-B0 configures a link-local address automatically, and then sends a neighbor solicitation message to check if the address is unique. If there is an address to be resolved or verified, the WX3401-B0 also sends out a neighbor solicitation message. When the WX3401-B0 receives a neighbor advertisement in response, it stores the neighbor's link-layer address in the neighbor cache. When the WX3401-B0 uses a router solicitation message to query for a router and receives a router advertisement message, it adds the router's information to the neighbor cache, prefix list and destination cache. The WX3401-B0 creates an entry in the default router list cache if the router can be used as a default router.

When the WX3401-B0 needs to send a packet, it first consults the destination cache to determine the next hop. If there is no matching entry in the destination cache, the WX3401-B0 uses the prefix list to determine whether the destination address is on-link and can be reached directly without passing through a router. If the address is un-link, the address is considered as the next hop. Otherwise, the WX3401-B0 determines the next-hop from the default router list or routing table. Once the next hop IP address is known, the WX3401-B0 looks into the neighbor cache to get the link-layer address and sends the packet when the neighbor is reachable. If the WX3401-B0 cannot find an entry in the neighbor cache or the state for the neighbor is not reachable, it starts the address resolution process. This helps reduce the number of IPv6 solicitation and advertisement messages.

Multicast Listener Discovery

The Multicast Listener Discovery (MLD) protocol (defined in RFC 2710) is derived from IPv4's Internet Group Management Protocol version 2 (IGMPv2). MLD uses ICMPv6 message types, rather than IGMP message types. MLDv1 is equivalent to IGMPv2 and MLDv2 is equivalent to IGMPv3.

MLD allows an IPv6 switch or router to discover the presence of MLD listeners who wish to receive multicast packets and the IP addresses of multicast groups the hosts want to join on its network.

MLD snooping and MLD proxy are analogous to IGMP snooping and IGMP proxy in IPv4.

MLD filtering controls which multicast groups a port can join.

MLD Messages

A multicast router or switch periodically sends general queries to MLD hosts to update the multicast forwarding table. When an MLD host wants to join a multicast group, it sends an MLD Report message for that address.

An MLD Done message is equivalent to an IGMP Leave message. When an MLD host wants to leave a multicast group, it can send a Done message to the router or switch. The router or switch then sends a group-specific query to the port on which the Done message is received to determine if other devices connected to this port should remain in the group.

Example - Enabling IPv6 on Windows XP/2003/Vista

By default, Windows XP and Windows 2003 support IPv6. This example shows you how to use the `ipv6 install` command on Windows XP/2003 to enable IPv6. This also displays how to use the `ipconfig` command to see auto-generated IP addresses.

```
C:\>ipv6 install
Installing...
Succeeded.

C:\>ipconfig

Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . :
    IP Address. . . . . : 10.1.1.46
    Subnet Mask . . . . . : 255.255.255.0
    IP Address. . . . . : fe80::2d0:59ff:feb8:103c%4
    Default Gateway . . . . . : 10.1.1.254
```

IPv6 is installed and enabled by default in Windows Vista. Use the `ipconfig` command to check your automatic configured IPv6 address as well. You should see at least one IPv6 address available for the interface on your computer.

Example - Enabling DHCPv6 on Windows XP

Windows XP does not support DHCPv6. If your network uses DHCPv6 for IP address assignment, you have to additionally install a DHCPv6 client software on your Windows XP. (Note: If you use static IP addresses or Router Advertisement for IPv6 address assignment in your network, ignore this section.)

This example uses Dibbler as the DHCPv6 client. To enable DHCPv6 client on your computer:

- 1 Install Dibbler and select the DHCPv6 client option on your computer.
- 2 After the installation is complete, select **Start > All Programs > Dibbler-DHCPv6 > Client Install as service**.
- 3 Select **Start > Control Panel > Administrative Tools > Services**.
- 4 Double click **Dibbler - a DHCPv6 client**.

- 5 Click **Start** and then **OK**.

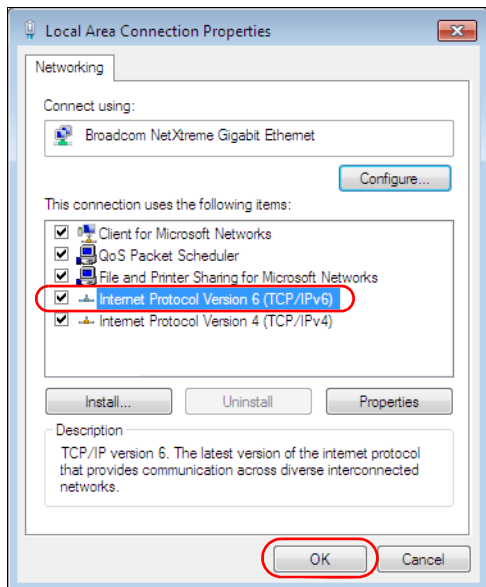

- 6 Now your computer can obtain an IPv6 address from a DHCPv6 server.

Example - Enabling IPv6 on Windows 7

Windows 7 supports IPv6 by default. DHCPv6 is also enabled when you enable IPv6 on a Windows 7 computer.

To enable IPv6 in Windows 7:

- 1 Select **Control Panel > Network and Sharing Center > Local Area Connection**.
- 2 Select the **Internet Protocol Version 6 (TCP/IPv6)** checkbox to enable it.
- 3 Click **OK** to save the change.

- 4 Click **Close** to exit the **Local Area Connection Status** screen.
- 5 Select **Start > All Programs > Accessories > Command Prompt**.
- 6 Use the `ipconfig` command to check your dynamic IPv6 address. This example shows a global address (2001:b021:2d::1000) obtained from a DHCP server.

```

C:\>ipconfig

Windows IP Configuration

Ethernet adapter Local Area Connection:

    Connection-specific DNS Suffix  . :
    IPv6 Address. . . . . : 2001:b021:2d::1000
    Link-local IPv6 Address . . . . . : fe80::25d8:dcab:c80a:5189%11
    IPv4 Address. . . . . : 172.16.100.61
    Subnet Mask . . . . . : 255.255.255.0
    Default Gateway . . . . . : fe80::213:49ff:feaa:7125%11
                                172.16.100.254
  
```

APPENDIX C

Services

The following table lists some commonly-used services and their associated protocols and port numbers.

- **Name:** This is a short, descriptive name for the service. You can use this one or create a different one, if you like.
- **Protocol:** This is the type of IP protocol used by the service. If this is **TCP/UDP**, then the service uses the same port number with TCP and UDP. If this is **USER-DEFINED**, the **Port(s)** is the IP protocol number, not the port number.
- **Port(s):** This value depends on the **Protocol**.
 - If the **Protocol** is **TCP**, **UDP**, or **TCP/UDP**, this is the IP port number.
 - If the **Protocol** is **USER**, this is the IP protocol number.
- **Description:** This is a brief explanation of the applications that use this service or the situations in which this service is used.

Table 41 Examples of Services

NAME	PROTOCOL	PORT(S)	DESCRIPTION
AH (IPSEC_TUNNEL)	User-Defined	51	The IPSEC AH (Authentication Header) tunneling protocol uses this service.
AIM	TCP	5190	AOL's Internet Messenger service.
AUTH	TCP	113	Authentication protocol used by some servers.
BGP	TCP	179	Border Gateway Protocol.
BOOTP_CLIENT	UDP	68	DHCP Client.
BOOTP_SERVER	UDP	67	DHCP Server.
CU-SEEME	TCP/UDP TCP/UDP	7648 24032	A popular videoconferencing solution from White Pines Software.
DNS	TCP/UDP	53	Domain Name Server, a service that matches web names (for instance www.zyxel.com) to IP numbers.
ESP (IPSEC_TUNNEL)	User-Defined	50	The IPSEC ESP (Encapsulation Security Protocol) tunneling protocol uses this service.
FINGER	TCP	79	Finger is a UNIX or Internet related command that can be used to find out if a user is logged on.
FTP	TCP TCP	20 21	File Transfer Protocol, a program to enable fast transfer of files, including large files that may not be possible by e-mail.
H.323	TCP	1720	NetMeeting uses this protocol.
HTTP	TCP	80	Hyper Text Transfer Protocol - a client/server protocol for the world wide web.
HTTPS	TCP	443	HTTPS is a secured http session often used in e-commerce.
ICMP	User-Defined	1	Internet Control Message Protocol is often used for diagnostic purposes.
ICQ	UDP	4000	This is a popular Internet chat program.
IGMP (MULTICAST)	User-Defined	2	Internet Group Multicast Protocol is used when sending packets to a specific group of hosts.
IKE	UDP	500	The Internet Key Exchange algorithm is used for key distribution and management.
IMAP4	TCP	143	The Internet Message Access Protocol is used for e-mail.
IMAP4S	TCP	993	This is a more secure version of IMAP4 that runs over SSL.
IRC	TCP/UDP	6667	This is another popular Internet chat program.
MSN Messenger	TCP	1863	Microsoft Networks' messenger service uses this protocol.
NetBIOS	TCP/UDP TCP/UDP TCP/UDP TCP/UDP	137 138 139 445	The Network Basic Input/Output System is used for communication between computers in a LAN.
NEW-ICQ	TCP	5190	An Internet chat program.
NEWS	TCP	144	A protocol for news groups.

Table 41 Examples of Services (continued)

NAME	PROTOCOL	PORT(S)	DESCRIPTION
NFS	UDP	2049	Network File System - NFS is a client/server distributed file service that provides transparent file sharing for network environments.
NNTP	TCP	119	Network News Transport Protocol is the delivery mechanism for the USENET newsgroup service.
PING	User-Defined	1	Packet Internet Groper is a protocol that sends out ICMP echo requests to test whether or not a remote host is reachable.
POP3	TCP	110	Post Office Protocol version 3 lets a client computer get e-mail from a POP3 server through a temporary connection (TCP/IP or other).
POP3S	TCP	995	This is a more secure version of POP3 that runs over SSL.
PPTP	TCP	1723	Point-to-Point Tunneling Protocol enables secure transfer of data over public networks. This is the control channel.
PPTP_TUNNEL (GRE)	User-Defined	47	PPTP (Point-to-Point Tunneling Protocol) enables secure transfer of data over public networks. This is the data channel.
RCMD	TCP	512	Remote Command Service.
REAL_AUDIO	TCP	7070	A streaming audio service that enables real time sound over the web.
REXEC	TCP	514	Remote Execution Daemon.
RLOGIN	TCP	513	Remote Login.
ROADRUNNER	TCP/UDP	1026	This is an ISP that provides services mainly for cable modems.
RTELNET	TCP	107	Remote Telnet.
RTSP	TCP/UDP	554	The Real Time Streaming (media control) Protocol (RTSP) is a remote control for multimedia on the Internet.
SFTP	TCP	115	The Simple File Transfer Protocol is an old way of transferring files between computers.
SMTP	TCP	25	Simple Mail Transfer Protocol is the message-exchange standard for the Internet. SMTP enables you to move messages from one e-mail server to another.
SMTPS	TCP	465	This is a more secure version of SMTP that runs over SSL.
SNMP	TCP/UDP	161	Simple Network Management Program.
SNMP-TRAPS	TCP/UDP	162	Traps for use with the SNMP (RFC:1215).
SQL-NET	TCP	1521	Structured Query Language is an interface to access data on many different types of database systems, including mainframes, midrange systems, UNIX systems and network servers.
SSDP	UDP	1900	The Simple Service Discovery Protocol supports Universal Plug-and-Play (UPnP).
SSH	TCP/UDP	22	Secure Shell Remote Login Program.
STRM WORKS	UDP	1558	Stream Works Protocol.
SYSLOG	UDP	514	Syslog allows you to send system logs to a UNIX server.

Table 41 Examples of Services (continued)

NAME	PROTOCOL	PORT(S)	DESCRIPTION
TACACS	UDP	49	Login Host Protocol used for (Terminal Access Controller Access Control System).
TELNET	TCP	23	Telnet is the login and terminal emulation protocol common on the Internet and in UNIX environments. It operates over TCP/IP networks. Its primary function is to allow users to log into remote host systems.
VDOLIVE	TCP UDP	7000 user- defined	A videoconferencing solution. The UDP port number is specified in the application.

Regulatory Notice and Statement

UNITED STATES of AMERICA

The following information applies if you use the product within USA area.

US Importer: Zyxel Communications, Inc, 1130 North Miller Street Anaheim, CA92806-2001, <https://www.zyxel.com/us/en/>

FCC EMC Statement

- The device complies with Part 15 of FCC rules. Operation is subject to the following two conditions:
 - (1) This device may not cause harmful interference, and
 - (2) This device must accept any interference received, including interference that may cause undesired operation.
- Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the device.
- This product has been tested and complies with the specifications for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This device generates, uses, and can radiate radio frequency energy and, if not installed and used according to the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation.
- If this device does cause harmful interference to radio or television reception, which is found by turning the device off and on, the user is encouraged to try to correct the interference by one or more of the following measures:
 - Reorient or relocate the receiving antenna
 - Increase the separation between the devices
 - Connect the equipment to an outlet other than the receiver's
 - Consult a dealer or an experienced radio/TV technician for assistance

The following information applies if you use the product with RF function within USA area.

FCC Radiation Exposure Statement

- This device complies with FCC RF radiation exposure limits set forth for an uncontrolled environment.
- This transmitter must be at least 20 cm from the user and must not be co-located or operating in conjunction with any other antenna or transmitter.
- Operation of this device is restricted to indoor use only, except for relevant user's manual mention that this device can be installed into the external environment.

CANADA

The following information applies if you use the product within Canada area.

Innovation, Science and Economic Development Canada ICES Statement

CAN ICES-3 (B)/NMB-3(B)

Innovation, Science and Economic Development Canada RSS-GEN & RSS-247 Statement

- This device contains licence-exempt transmitter(s)/receiver(s) that comply with Innovation, Science and Economic Development Canada's licence-exempt RSS(s). Operation is subject to the following two conditions: (1) this device may not cause interference, and (2) this device must accept any interference, including interference that may cause undesired operation of the device.
- This radio transmitter has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed below with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed, are strictly prohibited for use with this device.

If the product with 5G wireless function operating in 5150-5250 MHz and 5725-5850 MHz, the following attention must be paid.

- The device for operation in the band 5150-5250 MHz is only for indoor use to reduce the potential for harmful interference to co-channel mobile satellite systems.
- For devices with detachable antenna(s), the maximum antenna gain permitted for devices in the band 5725-5850 MHz shall be such that the equipment still complies with the e.i.r.p. limits as appropriate; and
- Where applicable, antenna type(s), antenna model(s), and the worst-case tilt angle(s) necessary to remain compliant with the e.i.r.p. elevation mask requirement set forth in Section 6.2.2.3 of RSS 247 shall be clearly indicated.

If the product with 5G wireless function operating in 5250-5350 MHz and 5470-5725 MHz, the following attention must be paid.

- For devices with detachable antenna(s), the maximum antenna gain permitted for devices in the bands 5250-5350 MHz and 5470-5725 MHz shall be such that the equipment still complies with the e.i.r.p. limit.
- L'émetteur/récepteur exempt de licence contenu dans le présent appareil est conforme aux CNR d'Innovation, Sciences et Développement économique Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes : (1) l'appareil ne doit pas produire de brouillage; (2) L'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.
- Le présent émetteur radio a été approuvé par Innovation, Sciences et Développement économique Canada pour fonctionner avec les types d'antenne énumérés ci dessous et ayant un gain admissible maximal. Les types d'antenne non inclus dans cette liste, et dont le gain est supérieur au gain maximal indiqué pour tout type figurant sur la liste, sont strictement interdits pour l'exploitation de l'émetteur.

Lorsque la fonction sans fil 5G fonctionnant en 5150-5250 MHz and 5725-5850 MHz est activée pour ce produit , il est nécessaire de porter une attention particulière aux choses suivantes

- Les dispositifs fonctionnant dans la bande de 5 150 à 5 250 MHz sont réservés uniquement pour une utilisation à l'intérieur afin de réduire les risques de brouillage préjudiciable aux systèmes de satellites mobiles utilisant les mêmes canaux;
- Pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis (pour les dispositifs utilisant la bande de 5 725 à 5 850 MHz) doit être conforme à la limite de la p.i.r.e. spécifiée, selon le cas;
- Lorsqu'il y a lieu, les types d'antennes (s'il y en a plusieurs), les numéros de modèle de l'antenne et les pires angles d'inclinaison nécessaires pour rester conforme à l'exigence de la p.i.r.e. applicable au masque d'élévation, énoncée à la section 6.2.2.3 du CNR-247, doivent être clairement indiqués.

Lorsque la fonction sans fil 5G fonctionnant en 5250-5350 MHz et 5470-5725 MHz est activée pour ce produit , il est nécessaire de porter une attention particulière aux choses suivantes.

- Pour les dispositifs munis d'antennes amovibles, le gain maximal d'antenne permis pour les dispositifs utilisant les bandes de 5 250 à 5 350 MHz et de 5 470 à 5 725 MHz doit être conforme à la limite de la p.i.r.e.

Industry Canada radiation exposure statement

This device complies with ISED radiation exposure limits set forth for an uncontrolled environment. This device should be installed and operated with a minimum distance of 20 cm between the radiator and your body.

Déclaration d'exposition aux radiations:

Cet équipement est conforme aux limites d'exposition aux rayonnements ISED établies pour un environnement non contrôlé. Cet équipement doit être installé et utilisé avec un minimum de 20 cm de distance entre la source de rayonnement et votre corps.

EUROPEAN UNION

The following information applies if you use the product within the European Union.

Declaration of Conformity with Regard to EU Directive 2014/53/EU (Radio Equipment Directive, RED)

- Compliance information for wireless products relevant to the EU and other Countries following the EU Directive 2014/53/EU (RED). And this product may be used in all EU countries (and other countries following the EU Directive 2014/53/EU) without any limitation except for the countries mentioned below table:
- In the majority of the EU and other European countries, the 5GHz bands have been made available for the use of wireless local area networks (LANs). Later in this document you will find an overview of countries in which additional restrictions or requirements or both are applicable. The requirements for any country may evolve. Zyxel recommends that you check with the local authorities for the latest status of their national regulations for the 5GHz wireless LANs.
- If this device for operation in the band 5150-5350 MHz, it is for indoor use only.
- This equipment should be installed and operated with a minimum distance of 20 cm between the radio equipment and your body.
- The maximum RF power operating for each band as follows:

The band 2,400 to 2,483.5 MHz is 93.54 mW
 The band 5,150 to 5,350 MHz is 189.23 mW
 The band 5,470 to 5,725 MHz is 931.11 mW

Български (Bulgarian)	<p>С настоящото Zyxel декларира, че това оборудване е в съответствие със съществените изисквания и другите приложими разпоредбите на Директива 2014/53/ЕС.</p> <p>National Restrictions</p> <ul style="list-style-type: none"> The Belgian Institute for Postal Services and Telecommunications (BIPT) must be notified of any outdoor wireless link having a range exceeding 300 meters. Safety Warnings

- Do not use this product near water, for example, in a wet basement or near a swimming pool.
- Do not expose your device to dampness, dust or corrosive liquids.
- Do not store things on the device.
- Do not obstruct the device ventilation slots as insufficient airflow may harm your device. For example, do not place the device in an enclosed space such as a box or on a very soft surface such as a bed or sofa.
- Do not install, use, or service this device during a thunderstorm. There is a remote risk of electric shock from lightning.
- Connect ONLY suitable accessories to the device.
- Do not open the device or unit. Opening or removing covers can expose you to dangerous high voltage points or other risks.
- Only qualified service personnel should service or disassemble this device. Please contact your vendor for further information.
- Make sure to connect the cables to the correct ports.
- Place connecting cables carefully so that no one will step on them or stumble over them.
- Always disconnect all cables from this device before servicing or disassembling.
- Do not remove the plug and connect it to a power outlet by itself; always attach the plug to the power adaptor first before connecting it to a power outlet.
- Do not allow anything to rest on the power adaptor or cord and do NOT place the product where anyone can walk on the power adaptor or cord.
- Please use the provided or designated connection cables/power cables/adaptors. Connect it to the right supply voltage (for example, 110V AC in North America or 230V AC in Europe). If the power adaptor or cord is damaged, it might cause electrocution. Remove it from the device and the power source, repairing the power adapter or cord is prohibited. Contact your local vendor to order a new one.
- Do not use the device outside, and make sure all the connections are indoors. There is a remote risk of electric shock from lightning.

- CAUTION: Risk of explosion if battery is replaced by an incorrect type, dispose of used batteries according to the instruction. Dispose them at the applicable collection point for the recycling of electrical and electronic devices. For detailed information about recycling of this product, please contact your local city office, your household waste disposal service or the store where you purchased the product.
- The following warning statements apply, where the disconnect device is not incorporated in the device or where the plug on the power supply cord is intended to serve as the disconnect device.
 - For permanently connected devices, a readily accessible disconnect device shall be incorporated external to the device;
 - For pluggable devices, the socket-outlet shall be installed near the device and shall be easily accessible.

Important Safety Instructions

- Caution! The RJ-45 jacks are not used for telephone line connection.
- Caution! Do not use this product near water, for example a wet basement or near a swimming pool.
- Caution! Avoid using this product (other than a cordless type) during an electrical storm. There may be a remote risk of electric shock from lightning.
- Caution! Always disconnect all telephone lines from the wall outlet before servicing or disassembling this product.
- Attention: Les prises RJ-45 ne sont pas utilisés pour la connexion de la ligne téléphonique.
- Attention: Ne pas utiliser ce produit près de l'eau, par exemple un sous-sol humide ou près d'une piscine.
- Attention: Évitez d'utiliser ce produit (autre qu'un type sans fil) pendant un orage. Il peut y avoir un risque de choc électrique de la foudre.
- Attention: Toujours débrancher toutes les lignes téléphoniques de la prise murale avant de réparer ou de démonter ce produit.

Environment Statement

ErP (Energy-related Products)

Zyxel products put on the EU market in compliance with the requirement of the European Parliament and the Council published Directive 2009/125/EC establishing a framework for the setting of ecodesign requirements for energy-related products (recast), so called as "ErP Directive (Energy-related Products directive)" as well as ecodesign requirement laid down in applicable implementing measures, power consumption has satisfied regulation requirements which are:

- Network standby power consumption < 8W, and/or
- Off mode power consumption < 0.5W, and/or
- Standby mode power consumption < 0.5W.

(Wireless setting, please refer to the chapter about wireless settings for more detail.)

European Union - Disposal and Recycling Information

The symbol below means that according to local regulations your product and/or its battery shall be disposed of separately from domestic waste. If this product is end of life, take it to a recycling station designated by local authorities. At the time of disposal, the separate collection of your product and/or its battery will help save natural resources and ensure that the environment is sustainable development.

Die folgende Symbol bedeutet, dass Ihr Produkt und/oder seine Batterie gemäß den örtlichen Bestimmungen getrennt vom Hausmüll entsorgt werden muss. Wenden Sie sich an eine Recyclingstation, wenn dieses Produkt das Ende seiner Lebensdauer erreicht hat. Zum Zeitpunkt der Entsorgung wird die getrennte Sammlung von Produkt und/oder seiner Batterie dazu beitragen, natürliche Ressourcen zu sparen und die Umwelt und die menschliche Gesundheit zu schützen.

El símbolo de abajo indica que según las regulaciones locales, su producto y/o su batería deberán depositarse como basura separada de la doméstica. Cuando este producto alcance el final de su vida útil, llévelo a un punto limpio. Cuando llegue el momento de desechar el producto, la recogida por separado éste y/o su batería ayudará a salvar los recursos naturales y a proteger la salud humana y medioambiental.

Le symbole ci-dessous signifie que selon les réglementations locales votre produit et/ou sa batterie doivent être éliminés séparément des ordures ménagères. Lorsque ce produit atteint sa fin de vie, amenez-le à un centre de recyclage. Au moment de la mise au rebut, la collecte séparée de votre produit et/ou de sa batterie aidera à économiser les ressources naturelles et protéger l'environnement et la santé humaine.

Il simbolo sotto significa che secondo i regolamenti locali il vostro prodotto e/o batteria deve essere smaltito separatamente dai rifiuti domestici. Quando questo prodotto raggiunge la fine della vita di servizio portarlo a una stazione di riciclaggio. Al momento dello smaltimento, la raccolta separata del vostro prodotto e/o della sua batteria aiuta a risparmiare risorse naturali e a proteggere l'ambiente e la salute umana.

Symbolen innebär att enligt lokal lagstiftning ska produkten och/eller dess batteri kastas separat från hushållsavfallet. När den här produkten når slutet av sin livslängd ska du ta den till en återvinningsstation. Vid tiden för kasseringen bidrar du till en bättre miljö och mänsklig hälsa genom att göra dig av med den på ett återvinningsställe.

台灣

以下訊息僅適用於產品具有無線功能且銷售至台灣地區

- 第十二條 經型式認證合格之低功率射頻電機，非經許可，公司，商號或使用者均不得擅自變更頻率、加大功率或變更原設計之特性及功能。
- 第十四條 低功率射頻電機之使用不得影響飛航安全及干擾合法通信；經發現有干擾現象時，應立即停用，並改善至無干擾時方得繼續使用。前項合法通信，指依電信法規定作業之無線電通信。低功率射頻電機須忍受合法通信或工業、科學及醫療用電波輻射性電機設備之干擾。
- 無線資訊傳輸設備忍受合法通信之干擾且不得干擾合法通信；如造成干擾，應立即停用，俟無干擾之虞，始得繼續使用。
- 無線資訊傳輸設備的製造廠商應確保頻率穩定性，如依製造廠商使用手冊上所述正常操作，發射的信號應維持於操作頻帶中
- 使用無線產品時，應避免影響附近雷達系統之操作。
- 高增益指向性天線只得應用於固定式點對點系統。

以下訊息僅適用於產品屬於專業安裝並銷售至台灣地區

- 本器材須經專業工程人員安裝及設定，始得設置使用，且不得直接販售給一般消費者。

安全警告 - 為了您的安全，請先閱讀以下警告及指示：

- 請勿將此產品接近水、火焰或放置在高溫的環境。
- 避免設備接觸：
 - 任何液體 - 切勿讓設備接觸水、雨水、高濕度、污水腐蝕性的液體或其他水份。
 - 灰塵及污物 - 切勿接觸灰塵、污物、沙土、食物或其他不適合的材料。
- 雷雨天氣時，不要安裝，使用或維修此設備。有遭受電擊的風險。
- 切勿重摔或撞擊設備，並勿使用不正確的電源變壓器。
- 若接上不正確的電源變壓器會有爆炸的風險。
- 請勿隨意更換產品內的電池。
- 如果更換不正確之電池型式，會有爆炸的風險，請依製造商說明書處理使用過之電池。
- 請將廢電池丟棄在適當的電器或電子設備回收處。
- 請勿將設備解體。
- 請勿阻礙設備的散熱孔，空氣對流不足將會造成設備損害。
- 請插在正確的電壓供給插座（如：北美 / 台灣電壓 110V AC，歐洲是 230V AC）。
- 假若電源變壓器或電源變壓器的纜線損壞，請從插座拔除，若您還繼續插電使用，會有觸電死亡的風險。
- 請勿試圖修理電源變壓器或電源變壓器的纜線，若有毀損，請直接聯絡您購買的店家，購買一個新的電源變壓器。
- 請勿將此設備安裝於室外，此設備僅適合放置於室內。
- 請勿隨一般垃圾丟棄。
- 請參閱產品背貼上的設備額定功率。
- 請參考產品型錄或是彩盒上的作業溫度。
- 產品沒有斷電裝置或者採用電源線的插頭視為斷電裝置的一部分，以下警語將適用：
 - 對永久連接之設備，在設備外部須安裝可觸及之斷電裝置；
 - 對插接式之設備，插座必須接近安裝之地點而且是易於觸及的。

About the Symbols

Various symbols are used in this product to ensure correct usage, to prevent danger to the user and others, and to prevent property damage. The meaning of these symbols are described below. It is important that you read these descriptions thoroughly and fully understand the contents.

Explanation of the Symbols

SYMBOL	EXPLANATION
	Alternating current (AC): AC is an electric current in which the flow of electric charge periodically reverses direction.
	Direct current (DC): DC is the unidirectional flow or movement of electric charge carriers.
	Earth; ground: A wiring terminal intended for connection of a Protective Earthing Conductor.
	Class II equipment: The method of protection against electric shock in the case of class II equipment is either double insulation or reinforced insulation.

Viewing Certifications

Zyxel Limited Warranty

Zyxel warrants to the original end user (purchaser) that this product is free from any defects in material or workmanship for a specific period (the Warranty Period) from the date of purchase. The Warranty Period varies by region. Check with your vendor and/or the authorized Zyxel local distributor for details about the Warranty Period of this product. During the warranty period, and upon proof of purchase, should the product have indications of failure due to faulty workmanship and/or materials, Zyxel will, at its discretion, repair or replace the defective products or components without charge for either parts or labor, and to whatever extent it shall deem necessary to restore the product or components to proper operating condition. Any replacement will consist of a new or re-manufactured functionally equivalent product of equal or higher value, and will be solely at the discretion of Zyxel. This warranty shall not apply if the product has been modified, misused, tampered with, damaged by an act of God, or subjected to abnormal working conditions.

Note

Repair or replacement, as provided under this warranty, is the exclusive remedy of the purchaser. This warranty is in lieu of all other warranties, express or implied, including any implied warranty of merchantability or fitness for a particular use or purpose. Zyxel shall in no event be held liable for indirect or consequential damages of any kind to the purchaser.

To obtain the services of this warranty, contact your vendor. You may also refer to the warranty policy for the region in which you bought the device at http://www.zyxel.com/web/support_warranty_info.php.

Registration

Register your product online at www.zyxel.com to receive email notices of firmware upgrades and related information.

Open Source Licenses

This product may contain in part some free software distributed under GPL license terms and/or GPL like licenses. Open source licenses are provided with the firmware package. You can download the latest firmware at www.zyxel.com. If you cannot find it there, contact your vendor or Zyxel Technical Support at support@zyxel.com.tw.

To obtain the source code covered under those Licenses, please contact your vendor or Zyxel Technical Support at support@zyxel.com.
